Farm Use or Disposition Reports for Other Commodities, 1960-61

A report covering disposition of turkeys, chickens and eggs, milk, and meat animals appeared in April 1962. Reports for the production, use, and value, of non-citrus fruits will be issued in 2 parts in May and July; and citrus fruits in October while the report on nuts will appear in August. Estimates for cotton and cottonseed will appear in the Cotton Report on May 8, 1962; estimates for tobacco will appear in the May 10, 1962 issue of Crop Production; estimates for sugar beets and sugarcane are scheduled for the June 11, 1962 issue of Crop Production; a report covering farm disposition and value of potatoes and sweetpotatoes will be issued in August 1962.

The farm use, sales and value data shown in this report are for the marketing season or crop year. The value estimates shown should not be confused with cash receipts which relate to the calendar year irrespective of the year of production.

FIELD AND SEED CROPS

Production, Farm Use, Sales and Value, by States, 1960-61

This report is one of a series dealing with farm disposition of major farm products. It presents estimated farm use and sales of grains, hay, certain seeds, and other specific commodities. Total estimated production of each commodity is that published in the December 1961 Annual Crop Production Summary. This report also shows estimated sales (sold or to be sold) from 1960 and 1961 crops and portions of production used or to be used for designated purposes on farms where grown.

Estimates of farm use and sales relate to disposition of a given year's production on the farms producing the crop regardless of time of disposition. Estimates of quantities fed to livestock and poultry represent the portion of the year's crop production fed on farms where produced; thus, they do not represent total quantities of such crops ultimately used for livestock and poultry feeding. Grain purchased for feed does not enter into these feed estimates. Some of the products shown as "sold" from farms are used for feed and seed on other farms in the same or other States. For soybeans, peanuts, and cowpeas, neither the total harvested production nor quantities fed to livestock include the quantities "hogged off" on farms. For certain crops, total seed requirements are shown, and for some, a further breakdown is made to show homegrown seed. The difference between total seed and homegrown seed would thus represent purchased seed, which is included in the total quantity sold. For corn, the quantity sold pertains only to grain corn. For 1960, the utilization of corn for feed and seed is shown based both on the equivalent production of all corn and on corn for grain. Estimates of equivalent all corn production were discontinued with the 1961 crop and all disposition items for that year relate only to corn for grain production.

Quantities of principal feed crops sold and used in the farm household, if any, are estimated and the residual--production less household use and sales--is shown as used for feed and seed. Changes in marketing patterns, dietary habits, and other factors such as closing of local milling facilities have reduced the quantity of grains used in the farm household to the point where this use has become insignificant in most States. Therefore, estimates of home use have been discontinued for most crops starting with 1961. For certain commodities, of which there is virtually no farm use, the entire production is shown as sales. Sales of some commodities are estimated directly from an analysis of survey data in which farmers report production and sales. For others, special disposition surveys are made in which farmers report their production of each commodity as well as the quantities used on their farms for each purpose. Whenever possible, sales have been checked by enumerations, such as reports of processors, or by records of handlings and shipments by rail, truck, and boat.

Season average prices by States are, for most commodities, the estimated mid-month prices received by farmers. The prices are weighted by estimated percentages sold in each month of the crop marketing season. Season average prices for popcorn, broomcorn, cowpeas for peas, sugarcane for sirup, maple products, hops, and most seeds are based primarily upon special survey data. Prices for sugarcane sirup (except Louisiana) relate to the average price received for quantities sold to December 1 of each year. Price estimating procedure makes allowance in season average prices for loans unredeemed at the end of the crop marketing season and for quantities bought by the Government under purchase agreements when such transactions are of significant volume. The season average price for the United States is obtained by weighting State prices by quantities sold. A United States price weighted by production may be derived by dividing U. S. value of production by quantity produced.

The season average prices for quantities sold are also used to evaluate total quantities produced, and quantities used on farms. Value of sales is computed by applying the unit price to quantity sold during the marketing year. In like manner, value of production and home consumption are computed by applying the season average price to the quantities produced or used.

The marketing season for each crop is shown on pages 37 and 38. A bibliography of farm disposition reports for 1960 and 1961 for other commodities is shown on page 2.
