AGRICULTURAL PRICES -- 1961 ANNUAL SUMMARY

This is the third annual bulletin summarizing the latest available monthly, season, and annual price estimates shown currently in Agricultural Prices and in the various annual publications showing Production, Use, and Value.

Prices Received by Farmers

The series designated Prices Received by Farmers relates to the average prices farmers receive for their products--generally at the point of first sale. Points of first sale by farmers may range from sales on a graded, packed, and delivered basis to bulk sales at the farm. The average price concept is that of a price which would result from dividing the total sum received by all farmers for that commodity by the total quantity of the commodity sold. These estimates, except as noted below, do not measure the price of specific grades, kinds, or varieties at a common point of sale.

Milk sold wholesale, apples, and citrus fruit are exceptions to the "as sold" concept. Milk is priced f.o.b. plant or receiving station except in California where it is priced f.o.b. ranch. The apple price series relates to the equivalent packinghouse-door returns for Washington and Oregon, to bulk fruit at first delivery point for California, and to the price "as sold" for other States. Citrus prices relate to equivalent returns at a specific point of sale. The citrus series is omitted from this publication, inasmuch as revised monthly equivalent returns for the 1960-61 crop will be published as a supplement to the October 1962 issue of Agricultural Prices. Also omitted are monthly and season average prices received for wool which will be included in the June 1962 issue of Agricultural Prices, since revised data for the April 1961-March 1962 marketing year were not available in time for inclusion in this publication.

Monthly Prices. Prices for most commodities are collected during a 5-day period centered on the 15th of the month. These prices are used to represent average prices received for sales of the commodity during the month. For some commodities, monthly prices as published currently are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group are meat animals and milkfat in cream. For the following commodities the current estimate is defined as a monthly average: Apples, peaches, pears, citrus, potatoes, tobacco, milk sold at wholesale to plants and dealers, broilers, and wool. At the State level prices are generally estimated only for months in which 0.5 percent or more of annual sales of the commodity are marketed.

Weights for computing monthly regional and United States average prices are as follows: (a) Annual production or sales for hay, all meat animals except beef cattle, milkfat in cream, milk retailed by farmers, and wool. At the end of the marketing year regional and United States wool prices are recomputed, using estimated sales during the month; (b) January 1 inventory numbers for milk cows; (c) estimated marketings during the month for all other commodities.

State season average prices are computed by weighting mid-month prices by the estimated percentage of sales made each month in the marketing season. Also included in the season average price are allowances for unredeemed loans and purchase agreement deliveries, if any, valued at the average loan rate. United States season average prices are computed by weighting State season average prices by the estimated quantities sold in each State. Marketing seasons for each commodity are shown on pages 174 and 175.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month. Regional and United States average prices are obtained by weighting State prices by estimated quantities sold in each State.

Average Prices Paid by Farmers

Estimates of prices paid by farmers, prepared and published by the Department of Agriculture, reflect the average unit cost of commodities and services commonly bought by farmers. Retail price data are collected from merchants serving local areas, principally by mail surveys. Prices reported are mostly cash quotations, although credit prices may also be reported in instances where sales are made on a credit basis. The items selected are those which are, generally speaking, most important in farmer expenditure patterns, both for production and family living.

For each commodity, respondents are asked to report prices for the size, grade, and quality most commonly sold to farmers. In general, definite specifications are requested only for those items for which specifications are an important factor in determining price. Lumber prices, for example, vary to some extent with length of cut, and substantially with kind and grade. For this reason, prices are requested for specific dimensions, grades, and kinds of lumber.

Similarly, prices are collected for dairy feeds of definite protein content, for refrigerators of specific sizes, and for tractors of specified types in specified horsepower categories. On the other hand, quotations of prices paid for rice and many other items are not stratified by kind, grade, or variety.

The normal variation in the specifications of products bought by farmers serving a particular purpose is reflected in reported prices. Men's overcoats, for example, are usually higher priced in the North than in the South, since heavier clothing is ordinarily worn in cooler climates.

Combined average prices paid by farmers at independent and chain stores are shown for food and tobacco, household supplies, clothing, household furnishings, building and fencing materials, motor supplies, (Tables 55 through 95) and farm supplies (Tables 99 through 101). Prices paid for farm machinery (Tables 96 through 98), field seeds, feed, and baby chicks (Tables 102 through 138), are based primarily upon reports from independent dealers.

Price Indexes

A detailed description of the Index of Prices Received by Farmers, and the Index of Prices Paid by Farmers including Interest, Taxes, and Farm Wage Rates is contained in Agricultural Economics Research, Vol. XI, No. 2 and 3, April-July 1959, The January 1959 Revision of the Price Indexes, by B. R. Stauber, R. F. Hale, and B. S. Peterson.

1/ Average per unit production payments made on butterfat, milk, beef cattle, sheep, and lambs are included for period October 1943-June 1946 inclusive.

Indexes of Prices Received by Farmers, and Index of Prices Paid by Farmers, including Interest, Taxes, and Farm Wage Rates

The standard reference base for the major statistical series of the Federal government is updated approximately every 10 years. Budget Bureau Circular A-28, dated May 10, 1960, changed this base from 1947-49 to 1957-59, effective January 1962.

Pursuant to that Circular, major Federal statistical series have been revised to the 1957-59 base, or, where that is not possible, are being converted to a 1957-59 reference base. Accordingly, annual averages for the Indexes of Prices Received by Farmers and for the Index of Prices Paid, including Interest, Taxes, and Farm Wage Rates, and for the major components of each index, converted to a 1957-59 reference base, were published for the years 1930 through 1961 in the January 1962 issue of Agricultural Prices.

These converted data supplement, but do not replace, the official series which, pursuant to law, are published on the 1910-14=100 base.

1/ The season average price refers to crop of designated year. The monthly prices refer to all potatoes being sold in a given month regardless of the year harvested. Thus the U. S. all-potato price for April 1960 includes sales from the 1959 fall crop and the 1960 winter and 1960 spring crops.

1/ Revisions for 1961 will be published in the July 1962 issue of Agricultural Prices.
2/ Equivalent packinghouse-door returns for Washington and Oregon, equivalent first delivery point for California and price as sold for other States. Price per box converted to price per 48-lb. bushel using average net box weights as follows: Washington 1956 crop 44 pounds, 1957 crop 43 pounds, 1958-60 crops 42 pounds, Oregon 45 pounds, California approximately 40 pounds.
3/ Refers to crop of designated year.

1/ Milk prices and milkfat tests shown for 1961 on pages 49 through 54 are revised where necessary for geographic divisions, the United States, and for the following States: New Jersey, Pennsylvania, Ohio, Michigan, Wisconsin, Minnesota, Missouri, Nebraska, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Mississippi, Louisiana, Oklahoma, Texas, Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Oregon, and California. Revised 1961 milk prices and milkfat tests for remaining States will be published in the September 1962 issue of Agricultural Prices.
2/ Includes data for some States not shown spearately.

NOTE: Wholesale milk prices shown on pages 49-51 relate to average price for the month, including premium payments and before hauling charges are deducted. For California, data relate to prices at the ranch.
