AGRICULTURAL PRICES -- 1962 ANNUAL SUMMARY

This is the fourth annual bulletin summarizing the latest available monthly, season, and annual price estimates shown currently in Agricultural Prices and in the various annual publications showing Production, Use, and Value.

Prices Received by Farmers

The series designated Prices Received by Farmers relates to the average prices farmers receive for their products - generally at the point of first sale. Points of first sale by farmers may range from sales on a graded, packed, and delivered basis to bulk sales at the farm. The average price concept is that of a price which would result from dividing the total sum received by all farmers for that commodity by the total quantity of the commodity sold. These estimates, except as noted below, do not measure the price of specific grades, kinds, or varieties at a common point of sale.

Milk sold wholesale, apples, and citrus fruit are exceptions to the "as sold" concept. Milk is priced f.o.b. plant or receiving station except in California where it is priced f.o.b. ranch. The apple price series relates to the equivalent packing-house-door returns for Washington and Oregon, to bulk fruit at first delivery point for California, and to the price "as sold" for other States. Citrus prices relate to equivalent returns at a specific point of sale. The citrus series is omitted from this publication, inasmuch as revised monthly equivalent returns for the 1961-62 crop will be published as a supplement to the October 1963 issue of Agricultural Prices. Also omitted are monthly and season average prices received for wool which will be included in the June 1963 issue of Agricultural Prices, since revised data for the April 1962-March 1963 marketing year were not available in time for inclusion in this publication.

Monthly Prices. Prices for most commodities are collected during a 5-day period centered on the 15th of the month. These prices are used to represent average prices received for sales of the commodity during the month. For some commodities, monthly prices as published currently are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group are meat animals and milkfat in cream. For the following commodities the current estimate is defined as a monthly average: Apples, peaches, pears, citrus, potatoes, tobacco, milk sold at wholesale to plants and dealers, broilers, and wool. At the State level, prices are generally estimated only for months in which 0.5 percent or more of annual sales of the commodity are marketed.

Weights for computing monthly regional and United States average prices are as follows: (a) Annual production or sales for hay, all meat animals except beef cattle, milkfat in cream, milk retailed by farmers, and wool. At the end of the marketing year regional and United States wool prices are recomputed, using estimated sales during the months; (b) January 1 inventory numbers for milk cows; (c) estimated marketings during the month for all other commodities.

State season average prices are computed by weighting mid-month prices by the estimated percentage of sales made each month in the marketing season. Also included in the season average price are allowances for unredeemed loans and purchase agreement deliveries, if any, valued at the average loan rate. United States season average prices are computed by weighting State season average prices by the estimated quantities sold in each State. Marketing seasons for each commodity are shown on pages 177 and 178.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month. Regional and United States average prices are obtained by weighting State prices by estimated quantities sold in each State.

Average Prices Paid by Farmers

The estimates of prices paid by farmers presented herein reflect the average unit cost of the more important commodities bought by farmers for production and family living. They are based on retail price data collected from merchants largely by means of mailed inquiries. Prices reported represent cash sales primarily, although credit prices may have been quoted for items customarily sold to farmers on a credit basis in some instances. Over the years the list of commodities covered has changed somewhat and the specifications revised in line with changes in product descriptions.

For each commodity, respondents are asked to report prices for the size, grade, and quality most commonly sold to farmers. In general, definite specifications are requested only for those items for which specifications are an important factor in determining price. Lumber prices, for example, vary to some extent with length of cut, and substantially with kind and grade. For this reason, prices are requested for specific dimensions, grades, and kinds of lumber. Similarly, prices are collected for dairy feeds of definite protein content, and for tractors of specified types in specified horsepower categories.

For items where the unit most commonly sold may vary widely from one part of the country to another or from one year to another, a two-celled question often is used asking both price per unit and size of unit. For example, respondents are asked to report the price and size of refrigerators or home freezers most commonly sold. The price tables herein, however, relate to refrigerators and freezers of the size stratifications indicated in the titles. The contents of packages customarily purchased also vary widely for a number of grocery store items such as bread, cereals, and laundry detergents. Thus, both price and size of package are obtained and prices converted to a pound basis. Prices of many other items are not stratified by kind, grade, or variety where such factors are not primarily responsible for sharp differences in average per unit prices.

The normal variation in the specifications of products bought by farmers serving a particular purpose is reflected in reported prices. Men's overcoats, for example, are usually higher priced in the North than in the South, since heavier clothing is ordinarily worn in a cooler climate.

Combined average prices paid by farmers at independent and chain stores are shown for food and tobacco, household supplies, clothing, household furnishings, building and fencing materials, motor supplies, (Tables 55 through 95) and farm supplies (Tables 99 through 101). Prices paid for farm machinery (Tables 96 through 98), field seeds, feed, fertilizer, and baby chicks (Tables 102 through 137), are based primarily upon reports from independent dealers.

1/ Average per unit production payments made on milkfat in cream, milk, beef cattle, sheep, and lambs are included for period October 1943-June 1946 inclusive.

Indexes of Prices Received by Farmers, and Index of Prices Paid by Farmers, including Interest, Taxes, and Farm Wage Rates

The standard reference base for the major statistical series of the Federal government is updated approximately every 10 years. Budget Bureau Circular A-28, dated May 10, 1960, changed this base from 1947-49 to 1957-59, effective January 1962.

Pursuant to that Circular, major Federal statistical series have been revised to the 1957-59 base, or, where that is not possible, have been converted to a 1957-59 reference base. Accordingly, annual averages for the Index of Prices Received by Farmers and for the Index of Prices Paid, including Interest, Taxes, and Farm Wage Rates, and for the major components of each index, converted to a 1957-59 reference base, were published for the years 1930 through 1962 in the January 1963 issue of Agricultural Prices.

These converted data supplement, but do not replace, the official series which, pursuant to law, are published on the 1910-14=100 base.

1/ Refers to crop of designated year. Preliminary season average price estimates for the 1962 crop based on sales through November with an allowance for marketings for the remainder of the season. A report covering farm disposition, season average price and value for the 1962 crop will be issued August 8, 1963.

1/ The season average price refers to crop of designated year. The monthly prices refer to all potatoes being sold in a given month regardless of the year harvested. Thus the U. S. all-potato price for April 1961 includes sales from the 1960 fall crop and the 1961 winter and 1961 spring crops.

1/ Revisions for 1962 will be published in the July 1963 issue of Agricultural Prices.
2/ Equivalent packinghouse-door returns for Washington and Oregon, equivalent first delivery point for California and price as sold for other States. Price per box converted to price per 48-lb. bushel using average net box weights as follows: Washington 1957 crop 43 pounds, 1958-61 crops 42 pounds, Oregon 45 pounds, California approximately 40 pounds.
3/ Refers to crop of designated year.

1957	57.4	57.6	56.4	56.4	56.9	47.0	56.9	29.46	29.65

1/ Refers to crop of designated year. State and United States season average prices include an allowance for unredeemed loans, valued at the average loan rate by States. Monthly prices do not include this allowance. For the 1962 crop the season average relates to the average for sales prior to April 1, 1963.

1/ Milk prices and milkfat tests shown for 1962 on pages 51 through 56 are revised where necessary for geographic divisions, the United States, and for the following States: New Jersey, Pennsylvania, Ohio, Michigan, Wisconsin, Minnesota, Missouri, Nebraska, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Mississippi, Louisiana, Oklahoma, Texas, Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Oregon, and California. Revised 1962 milk prices and milkfat tests for remaining States will be published in the September 1963 issue of Agricultural Prices.

2/ Includes data for some States not shown separately.

NOTE: Wholesale milk prices shown on pages 51-53 relate to average price for the month, including premium payments and before hauling charges are deducted. For California, data relate to prices at the ranch.
