MILK PRODUCTION AND DAIRY PRODUCTS, 1965 1/

SUMMARY

United States milk production in 1965 totaled 125.1 billion pounds, 1.5 percent below the record 127.0 billion pounds in 1964. The 1965 output was produced by 15.5 million milk cows, at a record high rate of 8,080 pounds per cow. The annual rate of milk produced per cow increased 2.2 percent from 7,907 pounds in 1964, but this was the smallest yearly gain since 1954. On a daily basis, total milk production in 1965 averaged 1.3 percent less than in 1964. Milk production in 1965 was equivalent to 643 pounds per person -- down 18 pounds from a year earlier. The annual average number of milk cows in 1965, at 15,477 thousand, was 3.6 percent less than the 1964 average of 16,061 thousand.

New records were set in 1965 for the production of 8 manufactured dairy products. Production surpassed previous highs for the following cheese varieties: Swiss, Italian, cream, blue mold, and cottage cheese (both creamed and curd). Total cheese production was a record, exceeding the previous high set in 1964 by 1 percent. Gains in output over the previous year by variety of cheese were as follows: Blue mold, 14 percent; Limburger, 10 percent; Italian, 6 percent; Swiss and cream cheese, 3 percent each; and cottage cheese (both creamed and curd) 1 percent. American cheese production was unchanged. Brick and Munster cheese output (combined) dropped 5 percent and Neuchartel, 20 percent below the year before. Creamery butter was down 7 percent from the previous year and was the lowest annual production since 1959. Production of 3 frozen products reached new peaks as ice milk gained 8 percent, ice cream, 2 percent, and milk sherbet, 1 percent. Mellorine output rose 1 percent. Canned sweetened condensed whole milk production was up 2 percent, the highest since 1949. Evaporated whole milk dropped 10 percent and was the smallest yearly output since 1932. Total nonfat dry milk for human food dropped 8 percent and was the smallest production since 1960. Dry whole milk was off 3 percent and dry buttermilk 14 percent. Dry skim milk for animal feed increased 7 percent.

Dealers' buying prices for milk used for fluid purposes in 1965 averaged \$5.39 per hundredweight. This is 4 cents higher than the average for 1964. The average price for single quarts of whole milk delivered to homes in 25 major cities was 28.1 cents, five-tenths cent above the year before. Half-gallon out-of-store prices in these markets averaged 46.2 cents -- the same as in 1964. Whole milk sales (preliminary) in 9 State and 69 Federal areas were up 1 percent from 1964 (daily basis). In 77 areas, skim milk sales were 8 percent higher. Milk and cream mixture sales in 75 areas decreased 2 percent; other cream item sales in 76 areas declined 1 percent. Sales of all fluid products, in milk equivalent terms, in 77 areas during 1965 were about 1 percent above the previous year. Receipts of milk from producers in 80 areas were a fraction higher than in 1964.

Warehouse stocks of butter were lower in 1965 than in 1964. Average holdings per month were 131 million pounds compared with 180 million in 1964. Maximum stocks of 220 million pounds, reached on August 1, 1965, were 24 million short of the 1964 peak. For the first half of 1965, American cheese holdings were below the corresponding 1964 levels, but averaged higher in the last 6 months. For 1965 as a whole, American cheese stocks averaged 302 million pounds per month, the same as a year earlier. Stocks of fluid cream were at a peak on July 1, when 15 million pounds were in storage, the highest level for any month since 1961. Plastic cream stocks, reached a peak of 3 million pounds on July 1, the highest in 4 years. First-of-month stocks of condensed and evaporated milk (bulk and case goods) averaged 11 million pounds during 1965, compared with 8 million in 1964.

1/ This report was prepared in the Dairy Statistics Branch under the direction of I. E. Wissinger, Chief, and agricultural statisticians W. D. Bormuth, G. G. Butler, L. W. Haynes, L. W. Wallin, and M. R. Banks.

MILK COWS AND MILK PRODUCTION, 1965

Milk production in the United States during 1965 totaled 125.1 billion pounds, 1.5 percent below the record output of 127.0 billion a year earlier. The 1965 output came from 15.5 million milk cows, at a record high rate of 8,080 pounds per cow. These revised estimates of milk production in 1964 and 1965 are based on an annual review of more complete production and utilization data. The annual rate of milk per cow was 2.2 percent above the 1964 rate -- the smallest yearly increase since 1954. On a daily basis, total milk production in 1965 was 1.3 percent less than in 1964, but output per cow was 2.5 percent more than in 1964, (leap year, which had an extra day). The annual average number of milk cows in 1965, at 15,477 thousand, was 3.6 percent less than the 1964 average of 16,061 thousand. Milk production in 1965 was equivalent to 643 pounds per person, down 18 pounds from a year earlier.

Monthly milk production in 1965 was below a year earlier except in January and March. Daily average production in February also was above 1964. Large declines occurred during the last quarter of the year from the sharply reduced milk cow numbers and lower yields per cow in many North Central States. In the West North Central Region, total yearly milk production was 5 percent below 1964. It fell 2 percent in the East North Central and 1 percent in the West. In the North Atlantic, output was unchanged but in the South Atlantic and South Central, it was 1 percent above a year earlier. The sharpest percentage reduction in milk production from 1964 was 9 percent in Alaska, followed by 8 percent in North Dakota, 7 percent in Iowa, 5 percent each in Indiana and Nebraska, and 4 percent each in Illinois, Minnesota, and Ohio. The largest percentage increases were 12 percent in Hawaii and 4 percent each in Georgia, Louisiana, and Nevada. Wisconsin produced the largest quantity of milk in 1965 followed by New York, Minnesota, California, and Pennsylvania. Combined production in these 5 States was 1 percent less than in 1964. The 5 leading States accounted for 45 percent of the United States production, about the same percentage as in 1964.

The national average rate of milk per cow in 1965 was 8,080 pounds, compared with 7,907 pounds for 1964 and the 1959-63 annual average of 7,192 pounds. Production per cow was above 1964 in all regions except the West North Central where it declined slightly. Increases ranged from 1 percent in the East North Central and the West to 5 percent in the South Atlantic. The highest State average per cow in 1965 was 10,840 pounds in California, followed by 10,370 in Arizona, 10,100 in Massachusetts, 10,090 in Hawaii, and 10,050 in New Jersey. Milk output averaged 9,000 or more pounds per cow in 11 other States.

Milk cow numbers declined sharply during the last half of 1965 to average 15.5 million for the year, the smallest number since records began in 1924. The 1965 average was down 3.6 percent from the 1964 average of 16.1 million, the sharpest annual decline since 1959. The June 1965 number was down 3 percent while the December number was 5 percent below 1964. Milk cow numbers were down in all regions of the United States -- decreases ranged from 1.8 percent in the West to 5.1 percent in the South Central. The annual average number of milk cows increased in Hawaii and was unchanged in Florida and New Mexico, but declined from 1964 in all other States.

Cows and heifers two years old and older kept for milk on January 1, 1966, totaled 16,607 thousand for the United States. The January 1 number was 6 percent below a year earlier and the smallest since 1900. These estimates include heifers 2 years old and older not yet freshened. Dairy replacement heifers 1 to 2 years old on January 1 totaled 4,068 thousand -- down 7 percent from a year earlier. Heifer calves under 1 year being raised for milking purposes declined 5 percent during 1965 and totaled 4,486 thousand on January 1, 1966.

MANUFACTURED DAIRY PRODUCTS, 1965

Eight manufactured dairy products set new production records in 1965, according to the Crop Reporting Board. Production surpassed previous highs for the following cheese varieties: Swiss, Italian, cream, blue mold, and cottage cheese (both creamed and curd). Output of ice cream, ice milk, and Mellorine also reached new peaks. American cheese was about equal to the 1964 record and all other miscellaneous cheese in total was second highest of record.

Total cheese production in 1965, at 1,743 million pounds, was a new record, exceeding the previous high set in 1964 by 1 percent. American cheese, at 1,155 million pounds, accounted for two-thirds of total cheese production. Wisconsin, with 45 percent of total American cheese, was first among States making this product. Swiss cheese production was 125 million pounds, up 3 percent from the year before and about 2 percent above the previous record set in 1956. Brick and Munster cheese (combined) at 50 million pounds was 5 percent less than the previous year. Output of Italian cheese was 233 million pounds, up 6 percent from the year before and the 11th consecutive annual record. Blue mold cheese was estimated at 19 million pounds -- 14 percent more than the 1964 record high production. Other cheeses, not classified, totaled 34 million pounds, 5 percent above a year earlier. Creamed cottage cheese production, at 842 million pounds, was a record high for the third consecutive year and was 1 percent above the 1964 total.

Creamery butter made in 1965 totaled 1,337 million pounds, down 7 percent from the previous year and the lowest since 1959. Minnesota, with 27 percent of the United States total, was the leading State in production of butter, and Wisconsin, with 22 percent, was second. Limburger cheese output totaled 3.2 million pounds -- 10 percent above the record low of 1964. Cream cheese production, at 117 million pounds, was 3 percent more than in 1964 -- the 17th consecutive record high production except for 1962. Neufchatel cheese output, at 6.4 million, was off 20 percent from a year earlier and, except for 1962, the smallest in the past decade.

Total ice cream production in 1965 at 753 million gallons increased 2 percent from 1964 and set a new high record. Ice milk output, at 236 million gallons, gained 8 percent -- the 21st consecutive annual increase. Milk sherbet made was 44 million gallons -- up 1 percent from 1964. Mellorine production totaled a record 52 million gallons, 1 percent above the previous year.

Evaporated whole milk production totaled 1,690 million pounds in 1965, a drop of 10 percent from the previous year and the smallest output since 1932. Canned sweetened condensed whole milk production was 97 million pounds, up 2 percent from 1964, the highest since 1949. Total nonfat dry milk for human food was 1,999 million pounds, a decline of 8 percent from 1964 and the smallest production since 1960. Dry whole milk, at 85 million pounds, was off 3 percent from the year before. Dry buttermilk production was 79 million pounds, a drop of 14 percent from a year earlier and lowest since 1958.

1/Revisions for 1964, by States and by months, for butter and byproducts and American cheese, were published by the Chicago Dairy office in the August 1965 issue "Milk Prices Paid by Creameries and Cheese Plants" released September 29, 1965. Data for 1965 are preliminary.

2/Includes all types of natural cheese except American.

3/Revisions for 1964 by States and by months, for evaporated milk, were published in the August 1965 Issue of the "Evaporated, Condensed, and Dry Milk Report" released September 30, 1965. Data for 1965 are preliminary.

4/Represents average prices received and average fat tests of all manufacturing grade milk sold by farmers. Current figures for this series are published each month in the "Agricultural Prices" Report.

Table 12.-Manufacturing grade milk: Average price per cwt. received by farmers, and average fat test of milk sold by farmers, United States, by months, 1961-65 1/

1/ Before hauling costs are deducted and including premiums paid to farmers. This price series is now one of the factors used in calculating the parity price equivalent of manufacturing grade milk. Current prices, fat tests, and the parity price equivalents are released each month in the "Agricultural Prices" Report.

2/ Revised.

3/ Preliminary.

FLUID MILK AND CREAM: PRICES, SALES, AND RECEIPTS, 1965

Dealers' buying prices average 4 cents higher

Prices of milk used for fluid purposes in 1965 averaged \$5.39 per hundred-weight, 4 cents more than in 1964. Averages were higher than a year earlier in 9 of the 12 months, lower only in January and March. In January and February averages were little changed from the same month a year earlier. The average in March was 5 cents per hundredweight lower, but in April was the same as a year earlier. The average was higher all other months of the year. The largest gain was 7 cents in September. In 7 of the 9 regions, buying prices averaged higher than in 1964 -- from 1 cent per hundredweight in the Middle Atlantic to 6 cents higher in each the East North Central, West North Central, and East South Central. Other regional increases were: Mountain, 4 cents; South Atlantic, 3 cents; and Pacific, 2 cents. Average decreases from the previous year were 7 cents per hundredweight in New England and 1 cent in the West South Central States.

Home delivery quart prices average higher; store half-gallons steady

Prices for single quart home delivered whole milk of the most common grade in 25 major cities averaged 28.1 cents during 1965. This was a half-cent higher than 1964. Averages were up in 20 of the 25 markets, the same in 3 markets, but lower in 2. For milk in half-gallons sold out-of-stores, the average was 46.2 cents -- the same as the year before. Average prices for milk in half-gallon containers during 1965 were higher in 13 of the 25 markets, about the same in 5 markets, but lower in 7.

Whole and skim milk sales advance; cream sales decline

Preliminary sales of whole milk during 1965 in 9 State and 69 Federal areas averaged 1 percent above 1964 on a daily basis. Skim milk sales in 77 areas were 8 percent higher. Average daily sales of milk and cream mixtures (half-and-half) in 75 areas were 2 percent lower; other cream item sales in 76 areas were down 1 percent. The estimated milk equivalent of 1965 sales of all fluid milk and cream items in 77 areas (the Federal areas in New York excluded) is about 1 percent higher than 1964.

Receipts slightly higher than previous year

Receipts of milk from producers during 1965 in 80 areas (8 State and 72 Federal orders) averaged 157 million pounds per day, fractionally more than in 1964. The number of producers in these markets averaged 166 thousand, 6 percent fewer than a year earlier. Receipts per producer, at 950 pounds per day, were up 6 percent.

^{1/} Prices are the latest reported during the first 10 days of each month. Grades may differ by markets.

^{2/} New York Metropolitan-New York City plus Nassau, Suffolk and Westchester counties all in the State of New York.

^{3/} In markets having a service charge on the first unit at each single delivery location, the charge has been divided between 2 quarts. Since the single quart concept used historically is based on every day delivery, it is assumed that under every-other-day delivery, the charge represents a two-quart purchase.

*Revised.
