Direct Hay Weighted Average Report for week ending 7/30/2021

Volume		
This Week	Last Reported ()	Last Year

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

As July comes to a close, famers are dealing with extremely hot temperatures not totally uncommon but also never enjoyed. The mercury approached triple digits but no reports of it actually making it there. Several of the major weather stations made note of how long it has actually been since triple digits occurred, Kansas City stated over 3 years and Springfield stated not since 2014. On a plus side the state continues to mostly drought free with only a very tiny spot in the Ozark hills noted as abnormally dry on the latest drought monitor. Despite the fact most farmers are believed to be done haying there was actually quite a bit of haying being reported in some areas this week. The supply of hay is moderate and demand is light to moderate and prices mostly steady. The Missouri Department of Agriculture has a hay directory visit <http://mda.mo.gov/abd/haydirectory/> for listings of hay <http://agebb.missouri.edu/haylst/>
