Direct Hay Weighted Average Report for week ending 1/15/2021

Volume		
This Week	Last Reported ( )	Last Year

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

USDA released annual production numbers this past week. Total production in Missouri was down 13 percent from last year, however 2019 was a giant production year in the state. Reports from other states was mixed. As far as states nearby go TX, NE, IA, KY and TN all saw total production higher than 2019 while MO, KS, OK and AR all saw lower total production. There is no doubt that there are some areas that are very short on hay supplies but just looking at this year's production is not a complete indicator that all areas with lower production are currently hurting for hay, especially here in MO where many producers had a lot of carryover from the 2019 hay season. As with every year though it does seem really high quality hay is quite limited. Given that most of the hay in piles is not sufficient feed source alone and combined with the current high cost of other grains and byproducts, if they can be found, it is making it a bit more difficult or expensive to provide adequate rations this feeding season. The supply of hay is moderate, demand is moderate and prices are mostly steady.
