Direct Hay Weighted Average Report for week ending 7/31/2020

Volume		
This Week	Last Reported ()	Last Year

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Much cooler weather in the state this week along with some rains made it not feel so much like the last week of July. The drought monitor has improved slightly over the last week and given that it is a few days behind should show more improvement next week. Currently about 32 percent of the state is showing with areas south of Kansas City and along the Kansas line being some of the driest. Hay movement remains very slow and supplies are heavy. Demand is light. The state managed to put up a lot of hay this year and piles are overflowing. There is some supply concerns floating around in states to the east but it seems unlikely that will be any kind of an issue here this feeding season. The Missouri Department of Agriculture has a hay directory visit <http://mda.mo.gov/abd/haydirectory/> for listings of hay <http://agebb.missouri.edu/haylst/>
