VEGETABLES - FRESH MARKET  
ANNUAL SUMMARY

1973

Estimated production of 22 principal fresh market vegetables and melons for 1973 is 2 percent more than in 1972, according to the Crop Reporting Board. The 1973 production of 239.8 million hundredweight compares with 1972 output of 234.4 million hundredweight and the 1971 total of 230.8 million cwt. Aggregate acreage for these 22 crops at 1.6 million acres was 1 percent less than in 1972. Yields however averaged slightly above a year earlier for all crops.

For selected major crops, the increases from 1972 for cabbage, carrots, celery, sweet corn, lettuce, and onions more than offset smaller production of cucumbers and tomatoes. The 22 principal vegetable and melon crops had a total value of 1,840 million dollars, 15 percent more than a year earlier. Leading crops in order of value were lettuce, tomatoes and onions, whose combined total accounted for 47 percent of the U. S. total.

The 1973 strawberry crop of 4.8 million hundredweight was 4 percent more than last year, but 8 percent less than 1971.

The five leading States in the 1973 production of fresh vegetables and melons in order of total output were California, Florida, Texas, Arizona, and New York. These States accounted for 66 percent of the harvested acreage, 73 percent of the production, and 76 percent of the value of vegetables and melons produced in the United States.

LEADING FRESH MARKET VEGETABLE STATES IN 1973

Rank	Harvested acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	31.4	California	40.1	California	41.6
2	Florida	15.1	Florida	14.7	Florida	16.3
3	Texas	11.6	Texas	9.6	Texas	10.0
4	Arizona	4.0	Arizona	4.7	Arizona	4.6
5	Michigan	3.8	New York	4.4	New York	3.5

Note: Major changes in the statistical program for fresh market vegetables were announced by the U. S. Department of Agriculture in December 1972. The following modifications are incorporated in this annual report for 1973:

1. For the 17 principal fresh market vegetable or melon crops, the 12 seasonal groups formerly used to report statistics for these crops is reduced to 4. These quarterly seasons are winter, spring, summer, and fall.

2. The practice of establishing equivalent acreage estimates for "dual usage crops" that may be harvested for both fresh market and processing is discontinued. Therefore asparagus, broccoli, carrots, and cauliflower estimates of the entire crop grown are provided. Additional tabulations are shown only for the quantities and value used for fresh market and processing.

This summary provides fresh market estimates for the 22 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics for over 80 percent of the national output of all vegetables and melons grown primarily for fresh market sale.
