

Wool and Mohair

United States
Department of
Agriculture

Washington, D.C.

Released March 29, 1994, by the Agricultural Statistics Board. Estimates refer to 1993.

1993 Wool Production Down 7 Percent

Shorn wool production in the United States during 1993 was 77.3 million pounds, down 7 percent from 1992. Sheep and lambs shorn totaled 9.93 million head, a decrease of 5 percent from 1992. The average price paid for wool sold in 1993 was \$0.51 per pound for a total value of \$39.0 million, down 35 percent from \$60.1 million in 1992.

1/ Includes shearing at commercial feeding yards.

2/ Weighted by sales.

For information call Linda Simpson at (202) 720-3578. Office hours are 8:00 a.m. to 4:30 p.m. ET.

Mohair production in the five major producing States (Arizona, Michigan, New Mexico, Oklahoma, and Texas) during 1993 was 14.8 million pounds, down 5 percent from 1992. Goats and kids clipped, at 2.15 million head, was down 5 percent from 1992. Average weight per head clipped was 6.9 pounds unchanged from a year earlier. Value of mohair production was \$12.1 million, down 10 percent from 1992.

Sheep and Lambs Shorn and Wool Produced United States 1909-93

Weight per Fleece United States 1909-93

Reliability of Wool and Mohair Production

Survey Procedures: A random sample of U. S. producers was surveyed to provide data for the number of sheep shorn and production estimates. Survey procedures ensured that all sheep and goat producers, regardless of size, had a chance to be included in the survey. Large producers were sampled more heavily than small operations. Data were collected from about 70,000 operators during the first half of January by mail, telephone, and face-to-face personal interviews and 86 percent of the reports were usable.

Estimation Procedures: These sheep shorn, wool, and mohair production estimates were prepared by the Agricultural Statistics Board after reviewing recommendations and analysis submitted by each State office. National and State survey data were reviewed for reasonableness with each other and with estimates from past years. Agricultural Stabilization and Conservation Service's (ASCS) record of pounds of wool and mohair from producers filing for incentive payments was used as check data.

Revision Policy: Revisions to previous estimates are made to improve the current estimate. Previous year estimates are subject to revision when current estimates are made. Inventory estimates will also be reviewed after data from the Department of Commerce's five-year Census of Agriculture are available. No revisions will be made after that date.

Reliability: Since all operations raising sheep and goats are not included in the sample for the inventory and production estimates, survey data are subject to sampling variability. Survey results for inventory, production, and stocks estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. The effects of these errors cannot be measured directly. They are minimized through rigid quality controls in the data collection process and through a careful review of all reported data for consistency and reasonableness.

To assist users in evaluating the reliability of the estimates in this report, the "Root Mean Square Error" is shown for selected items in the table below. The "Root Mean Square Error" is a statistical measure based on past performance and is computed using the differences between first and latest estimates. The "Root Mean Square Error" for sheep shorn estimates over the past 8 years is 0.6 percent. This means that chances are 2 out of 3 that the final estimate will not be above or below the current estimate of 9.9 million head by more than 0.6 percent, or about 59,400 head. Chances are 9 out of 10 that the difference will not exceed 1.1 percent, or about 108,900 head (the 90 percent confidence level).

Also shown in the table is a 8-year record showing the range between the first estimate and the latest estimate. Using estimates for Sheep and Lambs Shorn as an example, changes between the first inventory estimate and the latest estimate during the past 8 years have averaged 50,800 head, ranging from 6,600 to 106,400 head. The inventory estimate of Sheep and Lambs Shorn has been below the latest estimate 5 times and above 3 times in the last 8 years.

Reliability of U.S. Sheep Shorn and Wool Production Estimates ^{1/}

Item	Root Mean Square Error	90% Confidence Level	Difference Between First and Latest Estimates			Number of Years
