**Citrus Fruits:** Final Estimates by States, 1997-2002, U.S. Department of Agriculture, Agricultural Statistics Board, National Agricultural Statistics Service, Statistical Bulletin No. 997.

**Introduction:** This bulletin presents final estimates, including revisions made by the Agricultural Statistics Board (ASB), for the production years 1997 through 2002. Bearing acreage, yield, utilized production, price, and value data were published during calendar years 1998-2003 in periodic ASB reports. Data included in this publication provide a historic record and a benchmark for current estimates.

**Procedures:** Revisions were made after a thorough review of the original survey data and all additional data now available, including the 2002 Census of Agriculture. Other data considered included marketing agreement records, recorded truck and rail movement, quantities inspected, quantities used by processors, and the latest citrus surveys. The current acreage was evaluated with historic totals to ensure comparability with past Census relationships. The 1997-2002 estimates shown herein are considered final and will not be revised again.

At the National level, bearing acreage estimates were revised by less than 1 percent for Early, Midseason and Navel, Valencia, and All Oranges; Lemons, Tangerines, and All Citrus. Revisions were mainly attributable to revised bearing acreage estimates at the State level for California Navel and Miscellaneous Oranges, Valencia Oranges, Tangerines, and Lemons; and Texas grapefruit.

**Historic Estimates:** Estimates of citrus fruits for earlier years are available in the following Statistical Bulletins: No. 961 for 1991-92 to 1996-97, No. 899 for 1986-87 to 1991-92, No. 796 for 1981-82 to 1986-87, No. 712 for 1977-78 to 1981-82, No. 643 for 1974-75 to 1977-78, No. 579 for 1969-70 to 1974-75, No. 493 for 1964-65 to 1969-70, No. 380 for 1909-10 to 1964-65.

## Marketing Year Average Prices and Value of Production

State level marketing year average (MYA), or price per box, for fresh and processed sales are the weighted average of monthly sales that occur during a crop's marketing season, adjusted to the packinghouse-door level. The "all" sales MYA price is derived by dividing the "all" sales value by the "all" sales boxes. MYA prices at the U.S. level for commodities with different State box weights are computed as follows:

$$\text{Fresh Market MYAP} = \frac{(\text{State Fresh Value} * \text{State Box Weight})}{(\text{State Fresh Boxes} * \text{State Box Weight})}$$

$$\text{Process Market MYAP} = \frac{(\text{State Process Value} * \text{State Box Weight})}{(\text{State Process Boxes} * \text{State Box Weight})}$$

$$\text{"All" Sales MYAP} = \frac{(\text{State All Value} * \text{State Box Weight})}{(\text{State All Boxes} * \text{State Box Weight})}$$

For commodities with the same box weights across all States, the U.S. MYA's are derived by dividing the sum of States' values by the sum of States' boxes.

U.S. value of production for a given commodity is the sum of the State's values for that commodity. The State level value of production for each commodity is computed as follows:

$$\text{Fresh Market Value} = \text{Fresh Market MYAP} * \text{Fresh Market Boxes}$$

$$\text{Process Market Value} = \text{Process Market MYAP} * \text{Process Market Boxes}$$

$$\text{"All" Sales Value} = \text{Fresh Market Value} + \text{Process Market Value}$$

Citrus prices are based on weighted average f.o.b. packed prices received for fresh fruit and weighted average prices received at the processing plant door for processing fruit. Equivalent returns for fresh and processed fruit are calculated at the packinghouse-door level by deducting sorting, grading, packing, cooling, marketing, and other costs from the two base prices. In some cases, this results in negative returns.
