Utilization of milk, United States, 1950-59 .....	14

## MILK

### Farm Production, Disposition, and Income, 1958-59 1/

Milk production on farms in the United States totaled 124,396 million pounds in 1959. This was 487 million pounds less than was produced by milk cows in the year earlier. The decline in total output from 1958 was attributed to the decrease in number of milk cows since the annual rate of flow per cow reached a new record high. Total milk produced in 1959 was sufficient to provide 702 pounds per capita in the United States -- 15 pounds less than in the preceding year and the lowest since estimates were started in 1924.

The number of milk cows averaged 19,322 thousand head in 1959. This was about 2 percent less than in 1958 and the smallest annual estimate of milk cows on record. Milk per cow averaged 6,438 pounds in 1959 and topped the previous high set a year earlier by 122 pounds. Annual milkfat per cow averaged 243 pounds -- up 4 pounds from 1958.

Compared with the usual seasonal pattern of milk production, the proportion of the 1959 output in each of the months in the first and last quarters was higher than average for the corresponding months in the 1948-57 period, but percentages were generally lower during the middle of the year. Annual milk production increased from 1958 in the East and West Coast regions, but decreased in the central part of the country where only 2 States showed gains. Of the 6 major milk producing States in the country, Minnesota, Pennsylvania, and California attained new record highs in production, while Wisconsin, New York, and Iowa indicated declines from 1958.

Farm-churned butter reached a record low of 106 million pounds in 1959, and accounted for only 7 percent of the combined production of creamery butter and farm-churned butter. Butter churned on farms decreased 13 percent from 1958 and has dropped more than 60 percent in the past 10 years. Heaviest production was in the Southern States where many farmers keep only a few milk cows to furnish dairy products for home use.

In 1959, the volume of milk marketed by farmers as milk and cream totaled 112.6 billion pounds. Although the amount sold set a new high, the increase over each of the past two years was small. Farmers sold 100.7 billion pounds of milk to plants and dealers in 1959 for resale as fluid milk or for processing into manufactured dairy products. These whole milk sales were 1 percent larger than the previous high of 1958, and accounted for 81 percent of the total milk production. Marketings of whole milk were higher than in 1958 in all sections of the country except the East North Central States, where a small decrease occurred.

Milk separated on farms and marketed as cream to plants and dealers totaled 9.8 billion pounds. This was 8 percent less than in 1958, and continued the decrease in cream sales which has dropped over one-half in 10 years. Cream sales declined over 7 percent from 1958 in the North Central States, where 85 percent of the farm-skimmed cream in the entire country was marketed.

Farm retail sales by farmers of milk and cream sold directly to consumers accounted for 2.1 billion pounds of milk in 1959. This was 3 percent less than the previous record low set a year earlier. Retail sales of milk and cream by farmers decreased from 1958 in all regions except the West.

(Continued on page 16)

1/ This report was prepared by H. M. Walters and Charles W. LeGrande, Agricultural Statisticians, under the direction of I. E. Wissinger, Chief, Dairy Statistics Branch, Agricultural Estimates Division, Agricultural Marketing Service.

1/ For 1950 and earlier years includes also farm-churned butter sold. In 1950 receipts from farm-churned butter totaled 20,591 thousand dollars, about one-half of 1 percent of cash receipts from combined sales of milk, cream, and farm butter. Data on receipts from farm butter sold 1945-50 are included in table 3 of "Farm Production, Disposition, and Income From Milk, 1950-51".

2/ Cash receipts divided by milk or milkfat represented in combined marketings.

3/ For 1950 and earlier years excludes milk equivalent of farm butter sold.

4/ Computed at average returns per 100 pounds for milk in products marketed.

5/ Cash receipts from marketings of milk and cream plus value of milk used for farm consumption and farm butter churned.

6/ Milk produced on farms valued at average returns per 100 pounds for milk in products marketed. Includes value of milk fed to calves in addition to gross farm income.

7/ Preliminary.

1/ Preliminary. 2/ Cash receipts divided by milk or milkfat represented in combined marketings.

3/ Computed at average returns per 100 pounds for milk in products marketed.

4/ Cash receipts from marketings of milk and cream plus value of milk used for farm consumption and farm butter churned. 5/ Milk produced on farms valued at average returns per 100 pounds for milk in products marketed. Includes value of milk fed to calves in addition to gross farm income.

Table 9.-Milk cows and production of milk, milkfat, and butter on farms, by States, 1958

1/ Cash receipts divided by milk or milkfat represented in combined marketings.

2/ Computed at average returns per 100 pounds for milk in products marketed.

3/ Cash receipts from marketings of milk and cream plus value of milk used for farm consumption and farm butter churned.

4/ Milk produced on farms valued at average returns per 100 pounds for milk in products marketed. Includes value of milk fed to calves in addition to gross farm income.

1/ Includes an allowance for milk produced by cows not on farms. 2/ Includes ice cream, milk sherbet, ice milk, and miscellaneous minor frozen products. 3/ Milk equivalent of butter and condensed milk used in ice cream. 4/ Includes dry cream, malted milk, dry part skim milk, dry ice cream mix, and cottage cheese. 5/ Includes net milk equivalents of butter and frozen dairy products to avoid double counting of milk from which fat was reused in making a second dairy product. 6/ Includes an allowance for fluid consumption on farms not producing milk in addition to the consumption on farms where milk is produced shown in table 2. 7/ Net movement of whole milk or cream into export or storage channels. A negative figure represents net imports or net out-of-storage movement during the year.

8/ Residual, including miscellaneous minor uses and any inaccuracies of independently determined production and use items.  
 9/ Preliminary.

POSTAGE AND FEED PAID  
U. S. DEPARTMENT OF AGRICULTURE

Official Business

(Continued from page 3)

Farmers used a total of over 11.7 billion pounds of milk on farms where produced. This was 6 percent less than the former record low of 1958 and accounted for 9 percent of the 1959 milk production. Of the total milk used on farms in 1959, 6.8 billion pounds were consumed as fluid milk and cream, 2.1 billion pounds were used in farm-churned butter, and 2.8 billion pounds were fed to calves.

Cash receipts from marketings of milk and cream during 1959 totaled \$4,610 million. This was 1 percent above the year earlier but was about 1 percent below the record high set in 1957. These cash receipts included income from the sale of whole milk and farm-skimmed cream by farmers to plants and dealers and retail sales of milk and cream by farmers direct to customers. Farmers realized an average return of \$4.09 per hundredweight of milk, or \$1.08 per pound of milkfat in all milk and cream marketed in 1959. These returns were 3 cents per hundredweight higher than in the previous year on a milk basis and 1 cent per pound higher on a milkfat basis. Cash income from milk and cream increased from 1958 in all sections of the country except the East North Central and South Central States. Income decreased in 17 States, which included 9 States in the North Central regions.

Farmers realized a cash return of \$4,182 million from whole milk sold to plants and dealers. The price per hundredweight of whole milk sold to plants and dealers averaged \$4.15 in 1959. This was 3 cents higher than in the year before, but 6 cents per hundredweight lower than in 1957.

Income to farmers from farm-skimmed cream sold to plants and dealers totaled \$215 million in 1959. This was 8 percent less than the year earlier, and reflected the continued decline in marketings. The average price per pound of fat in cream remained at the 1958 level of 59.1 cents.

Cash income to farmers from retail sales of milk and cream sold direct to customers was \$213 million. This was 3 percent less than in 1958, as the decrease in volume of sales more than offset the slight gain in prices.

Farmers' gross income from the sale of dairy products totaled \$5,012 million in 1959 -- a small increase from the preceding year, but 2 percent less than in 1957. Gross farm income includes the cash receipts from the marketings of milk and cream sold by farmers to plants and dealers and the value of milk used on farms where produced as fluid milk and cream and farm-churned butter. Total farm value of milk produced was \$5,124 million in 1959. This was a small gain from the year before, but still below the 1957 income. Farm value of milk produced includes the value of milk fed calves in addition to gross farm income from milk.
