MILK

Production, Disposition, and Income, 1961-62 1/

Milk production in the United States totaled 125,927 million pounds in 1962, according to the Crop Reporting Board. The 1962 output was about one-half of 1 percent more than the previous record of 125,442 million pounds in 1961. Estimates for Alaska and Hawaii are included in the United States totals, beginning with 1960.

The increase in total milk production in 1962 resulted from an advance in annual output per cow. Production per cow in 1962 was a record annual rate of 7,370 pounds. This is an increase of 147 pounds from the 1961 rate compared with the annual average increase from a year earlier of 227 pounds during the period 1957-61.

The annual average number of milk cows in 1962 was 17,086,000 head -- down nearly 2 percent from 1961. The 1962 number was the lowest of record in the series of estimates beginning in 1924. Except for an upturn in 1953, the number of milk cows has declined since 1944. After dropping 4 or 5 percent annually from 1956 to 1959, the rate of decline in number of milk cows has slowed down in the last 3 years. From 1959 to 1962, the decline has averaged about 2 percent a year.

Sales of whole milk to plants up 2 percent in 1962

Producers sold 110,280 million pounds of whole milk to plants and dealers in 1962, 2 percent more than in 1961. Sales of whole milk to plants and dealers accounted for 88 percent of the total production in 1962, compared with 86 percent in 1961. The increasing percentage of milk production being sold through plants and dealers is the result of decreased farm uses and producers shifting from sales of farm-separated cream to whole milk.

Milk marketed as farm-separated cream continued to decline as farmers sold 5,973 million pounds in 1962, down 14 percent from 1961. Most of the decline from 1961 to 1962 occurred in the West North Central Region, which still accounts for 82 percent of the farm-separated cream sold in the United States in 1962. Except for an upturn in 1949 and 1950, milk marketed as farm-separated cream has declined since 1941. Only 5 percent of the milk produced in the Nation in 1962 was separated for sales as cream, compared with 15 percent in 1952.

Milk and cream (milk equivalent) sold by producers directly to consumers in 1962 totaled 1,956 million pounds, up slightly from 1961. Direct retail marketings by producers accounted for about 2 percent of all milk produced in 1962.

(Continued on page 15)

1/ This report was prepared by G. G. Butler and K. D. Ackers, Agricultural Statisticians, under the direction of I. E. Wissinger, Chief, Dairy Statistics Branch, Agricultural Estimates Division, Statistical Reporting Service.

1/ Cash receipts divided by milk or milkfat represented in combined marketings.

2/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream.

3/ Cash receipts from marketings of milk and cream plus value of milk used for home consumption and farm-churned butter.

4/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream. Includes value of milk fed to calves in addition to gross farm income.

5/ Includes Alaska and Hawaii.

1/ Preliminary. 2/ Cash receipts divided by milk or milkfat represented in combined marketings.

3/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream.

4/ Cash receipts from marketings of milk and cream plus value of milk used for home consumption and farm-churned butter. 5/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream. Includes value of milk fed to calves in addition to gross farm income. 6/ See footnote 4, page 6.

1/ Cash receipts divided by milk or milkfat represented in combined marketings. 2/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream. 3/ Cash receipts from marketings of milk and cream plus value of milk used for home consumption and farm-churned butter.

4/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream. 5/ See footnote 4, page 6. Includes value of milk fed to calves in addition to gross farm income.

1/ Includes Alaska and Hawaii. 2/ Includes ice cream, milk sherbet, ice milk, and other frozen dairy products. 3/ Milk equivalent of butter and condensed milk used in ice cream. 4/ Includes dry cream, malted milk powder, dry part-skim milk, dry ice cream mix, cottage cheese, and other products using milkfat. 5/ Includes net milk equivalents of butter and frozen dairy products to avoid double counting of milk from which fat was reused in making a second dairy product. 6/ Includes an allowance for fluid consumption on farms not producing milk in addition to the consumption on farms where milk is produced shown in Table 2. 7/ Net movement of whole milk or cream into export or storage channels. A negative figure represents net imports or net out-of-storage movement during the year. 8/ Residual, including miscellaneous minor uses and any inaccuracies of independently determined production and use items. For 1960-62, allows for all uses in Alaska and Hawaii, except fluid consumption.

Rapid decline in milk used on farms

The estimated 7,718 million pounds of milk used on farms where produced was down 9 percent from 1961. This is about the same percentage decline as from 1960 to 1961. Farm uses of whole milk represents a smaller percentage of total United States production -- 6 percent in 1962 and 7 percent in 1961. Farm uses in 1962 consist of 2,373 million pounds fed to calves, 4,442 million consumed as fluid milk and cream, and 903 million used for farm-churned butter. All of these items were below a year earlier, with farm-churned butter down 19 percent from 1961.

Cash receipts down 1 percent from 1961

Estimated cash receipts from producer marketings of milk and cream in 1962 were 4,858 million dollars, about 1 percent less than the 1961 record. Although the combined marketings direct to consumers and producer sales to plants were up 1 percent from 1961, a decline of 9 cents in the average price received for milk and cream in terms of hundredweight of milk resulted in lower cash receipts.

Cash receipts from whole milk sold to plants and dealers in 1962 totaled 4,529 million dollars, about 1 percent less than 1961. The average price per hundredweight for whole milk sold to plants and dealers was \$4.11 in 1962, compared with \$4.22 in 1961.

Producers' receipts from cream sold to plants and dealers totaled 129 million dollars in 1962, a decline of 18 percent from 1961. The average price received per pound for milkfat in cream was 58.7 cents in 1962, compared with 61.5 in 1961.

Marketings of milk and cream direct to consumers by farmers returned 200 million dollars in 1962, compared with 198 million a year earlier. The average price received in 1962 was 22.0 cents per quart, compared with 21.8 cents the preceding year.

Gross farm income--value of fluid milk and cream consumed in farm household, cream used for farm-churned butter and marketings of milk and cream, totaled 5,090 million dollars in 1962. This is 2 percent less than the 1961 gross farm income from dairy products. Estimated total farm value of milk produced, including the value of milk fed to calves, was 5,183 million dollars in 1962, down 2 percent from 1961.

More than one-half of 1962 milk used in factory products

Estimated whole milk equivalent of all manufactured dairy products produced in 1962 was 63,700 million pounds, 1 percent more than in 1961 and a record quantity in the series of estimates beginning in 1924. About 51 percent of all milk produced in 1962 was used in factory products, compared with 50 percent in 1961. The net milk equivalent of creamery butter produced in 1962 was 4 percent more than that of 1961 and accounts for 26 percent of all the milk produced. The quantity of milk used for cheese products in 1962 was 4 percent less than in 1961. Total consumption of fluid milk and cream products by the nonfarm population increased nearly 1 percent from 1961 to 1962. Forty-one percent of the milk produced in 1962 was consumed in fluid form by the nonfarm population. Farm households consumed 5 percent of the total.
