World Agricultural Production

Variable Rainfall Affects EU Wheat and Rapeseed Production

During May, rainfall was two to three times the average in many eastern and central European countries. Excessive rainfall was particularly unfavorable in Poland, Slovakia, and Hungary. The rains affected the wheat crop, which was in the jointing to flowering stages, and the rapeseed crop, which was primarily in the flowering stage. Meanwhile, some countries in western Europe (the United Kingdom and France) experienced dry conditions during April and May, subjecting the crops to soil moisture stress. Rainfall in late May and early June likely benefited the crops in western Europe. Wheat and rapeseed had also benefited from favorable weather during the autumn, winter, and early spring. In general, excellent planting conditions last autumn were followed by a mild winter with low winterkill and favorably high spring soil moisture.

Wheat

EU wheat production for 2010/11 is forecast at 143.0 million tons, down 2.1 million or 1.5 percent from last month, but up 4.1 million or 2.9 percent from 2009/10. Harvested area is

Approved by the World Agricultural Outlook Board

estimated at 25.8 million hectares, down 0.1 million from both last month and last year. Yield is estimated at 5.54 tons per hectare (t/ha), compared to 5.60 t/ha last month and 5.37 t/ha last year. Winter wheat accounts for the majority of wheat produced in the EU, while spring wheat is concentrated in the northern tier countries.

Excessive rainfall has resulted in reductions to wheat production forecasts. Wheat production has been reduced by 0.6 million tons in Poland (with a 0.1 million ton area reduction), 0.3 million in Hungary, 0.2 million in the Czech Republic, and 0.2 million in Slovakia. On the other hand, production was reduced 0.3 million tons in both France and the United Kingdom because of dryness.

Rapeseed

EU rapeseed production for 2010/11 is forecast at 21.0 million tons, down 0.5 million or 2 percent from last month and down 2 percent from last year. Harvested area is estimated at a record 6.8 million hectares, down 0.1 million from last month but up 0.3 million or 5 percent from last year. Yield is forecast at 3.09 t/ha, against last year's near-record 3.30 t/ha. Winter rapeseed accounts for the majority of the rapeseed crop.

The largest producers of rapeseed in the EU are Germany, Poland, France, and the United Kingdom; together they account for an estimated 73 percent of the 2010/11 crop. Production in Poland is forecast to be down 0.35 million tons and down 0.07 million hectares from last month, while smaller reductions were made to Hungary, Slovakia, and Germany. The downward revisions were made due to excessive precipitation. Meanwhile, reductions to the UK and French crops were made because of dryness. Heavy rains in southeastern Europe likely benefited the rapeseed crop. This area, which includes Romania and Bulgaria, has seen phenomenal growth in area sown to rapeseed during the past several years. (*For more information, contact Bryan Purcell at 202-690-0138.*)

Middle East: Yellow Rust Epidemic Reduces 2010/11 Wheat Output

USDA estimates total wheat production in the Middle East region for 2010/11 at 38.8 million tons, down 2.3 million or 6 percent from last month, but up 5 percent from last year. Harvested area is estimated at 17.8 million hectares, down 2 percent from last month, but up 5 percent from last year. Yield is forecast to decline by 4 percent to 2.18 tons per hectare, but remain slightly above average. Wheat yields in Syria, Turkey, and Lebanon were affected by a serious regional fungal disease outbreak. Winter grain growing conditions in much of the Middle East have been nearly ideal this season, with above normal rainfall and temperatures. These conditions led to lush vegetative crop development and strong wheat production prospects. The warm and humid growing environment, however, also provided an excellent breeding ground for a new and virulent strain of yellow stripe rust. A regional rust epidemic was declared by crop scientists from the Borlaug Global Rust Initiative (BGRI) and the International Center for Agricultural Research for the Dry Areas (ICARDA) in late April, with a warning of potentially significant crop losses this year. Yellow rust outbreaks have been reported in Syria, Turkey, Lebanon, Iraq, and Iran. The fungal disease is primarily affecting soft bread wheat varieties, but is also reported in some hard wheat crops as well. The most serious crop reductions at this time are expected in Syria and southern Turkey, where the concentration of rust-affected crops are

the highest. NDVI (vegetation indices) signatures in these regions were suggesting record potential yield prior to the epidemic. Heavy late-season rust infections, however, caused substantial vegetative damage and premature senescence. Crops are maturing an average of four to six weeks earlier than normal in the worst affected areas. Crop scientists familiar with the disease indicate that yield reductions of 35 to 50 percent are typical in seriously infected fields, while in the worst instances, nearly total crop loss is possible. USDA at this time is estimating Syria's 2010/11 wheat crop at 3.75 million tons, down 1.25 million or 25 percent from last month; Turkey's 2010/11 wheat crop at 17.5 million tons, down 1.0 million or 5 percent from last month; Lebanon's 2010/11 wheat crop at 0.1 million tons, down 0.03 million or 23 percent. Harvest activities in the Middle East are ongoing and will continue in highland areas of Turkey and Iran through August. The actual extent of crop losses from the rust epidemic will become clearer in the coming months, as regional authorities review harvest and grain procurement results. *(For additional information, contact Michael Shean at 202-720-7366.)*

Ukraine Corn: Record Production Forecast for 2010/11

USDA forecasts Ukraine corn production for 2010/11 at 13.0 million tons, up 1.5 million or 13 percent from last month and up 2.5 million or 24 percent from last year. Both area and production are estimated at record levels, and the forecast yield of 5.0 tons per hectare matches the record set last season. Local commodity analysts were forecasting an increase in corn area for 2010/11 based on high prices relative to other major grains, and official planting data indicate that planted area had reached 2.7 million tons by June 4, up approximately 0.4 million from the same date last year. Corn yield has benefited from a steady improvement in technology in recent years, including an increase in the use of hybrid seed. *(For more information, contact Mark Lindeman at 202-690-0143.)*

Mexico Corn: Drought Marginally Reduces Yield Prospects

USDA decreased the forecast for the 2010/11 Mexican corn production to 24.0 million tons, down 0.5 million or 2 percent from last month, but up 2.7 million or 13 percent from last year. The harvested area is estimated at 7.2 million hectares, unchanged from last month but up 1.0 million from last year. The month-to-month reduction in estimated production was based on persistent dryness on the corn plateau, which includes the states of Chiapas, Guerrero, Jalisco, Mexico, Michoacan, Puebla, Sinaloa, and Veracruz. The corn plateau received only scattered showers instead of the monsoon-type rainfall that is typical in late April and May. Total precipitation for April and May was less than 50 percent of normal, resulting in drier-than-normal soil moisture during May throughout the country. Although May was unfavorably dry, corn planting was only recently completed, and average rainfall during the remainder of the growing season could prevent significant yield loss. *(For more information, contact Arnella Trent 202-720-0881.)*

Brazil Cotton: Mato Grosso Drought Reduces 2009/10 Harvest Prospects

USDA estimates Brazil cotton production for 2009/10 at 5.75 million bales, down 0.10 million or 2 percent from last month but up 0.27 million or 5 percent from 2008/09. Estimated area remains unchanged from last month at 0.84 million hectares. Dryness has prevailed for two months in Mato Grosso, which accounts for about half of Brazil's total cotton area. Good crop

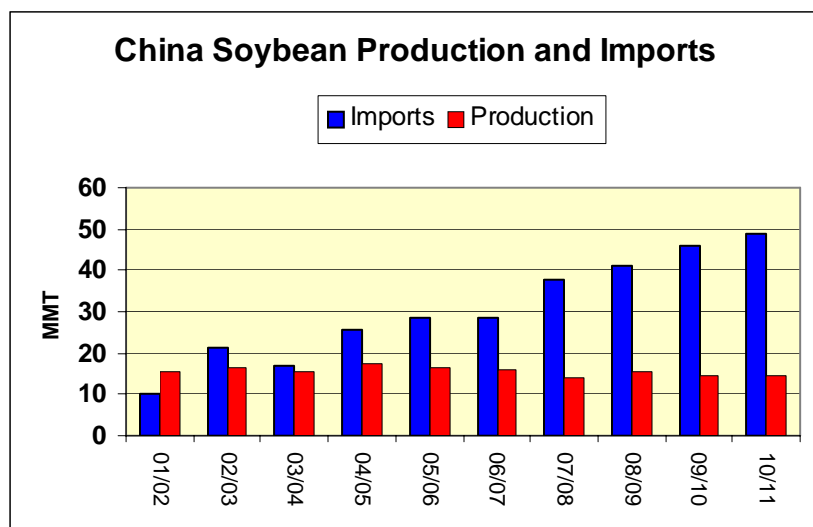

conditions in Bahia have compensated in part for the lower expected output in Mato Grosso. About 30 percent of the country's cotton area is located in Bahia. *(For more information, contact Mark Lindeman at 202-690-0143.)*

China Soybean Area and Production Expected to Decline in 2010/11

China's 2010/11 soybean production is forecast at 14.6 million tons, down 0.6 million or 4 percent from last month and down about 1 percent from last year's revised production of 14.7 MMT. Soybean area is estimated at 8.6 million hectares, down 0.4 million from last month and down 0.2 million from last year. The forecast yield of 1.70 tons per hectare is nearly the same as last month and slightly higher than last year's yield.

Soybeans in Northeast China (the main production area) are normally planted from mid-April to mid-May. This year, planting was delayed by one to three weeks due to unusually cool and wet spring weather, particularly in the provinces of Heilongjiang and Inner Mongolia. The planting delays could have an impact on soybean yields by shortening the growing season and exposing the crop to additional weather risks.

Heilongjiang province accounts for more than 40 percent of national soybean output. The Heilongjiang Agricultural Bureau (HAB) estimated Heilongjiang's 2010/11 soybean planted area at 4.33 million hectares, down 373,000 hectares or 8 percent from last year. The reduction was attributed to low soybean prices and higher comparative profits for rice and corn, which encouraged farmers to expand grain area. Heilongjiang soybean production continues to be difficult to estimate. The Heilongjiang Provincial Grain Bureau reported that as of May 10, farmers had marketed 7.1 million tons of 2009/10 new crop soybeans. The Heilongjiang Provincial Statistics Bureau however reported that total soybean production in 2009/10 was only 5.9 million tons. Area statistics are also contested, with estimates for 2009/10 planted area ranging from 3.9 to 4.7 million hectares.

China's demand for vegetable oil and protein meal has been rising for many years, keeping pace with population growth and higher incomes. Soybean production has not been able to keep up with the rising demand for soybean products, and massive imports (estimated at 49.0 million tons in 2010/11) will be needed. The large imports have depressed domestic soybean prices, which in turn have led to lower planted area and production, thus

increasing the need for additional imports. *(For more information, contact Paulette Sandene at 202-690-0133.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-467) June 10, 2010.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, July 9, 2010.

World and Selected Countries and Regions

TABLE 18

The table below presents a 29-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 15.3 million tons (2.8 percent) and ranged from -32.2 to 29.6 million tons. The June projection has been below the final 18 times and above the final 11 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2008/09 1/

1/ The final estimate for 1981/82-2008/09 is defined as the first November estimate following the marketing year.

2/ May not total 28 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
