Raisins: World Markets and Trade

U.S. Raisin Exports to Expand

U.S. raisin exports for 2011/12 are forecast to rise 6 percent to 155,000 metric tons (MT) primarily due to higher shipments to Europe and China. Although a majority of Europe's market is supplied by Turkey and Iran, the United States is virtually unchallenged in China's growing import market. U.S. exports to Japan and Canada will likely remain unchanged as these markets have been flat for several years. Globally, the United States is forecast to remain the second largest exporter behind Turkey.

Global raisin production for 2011/12 is forecast at 1.1 million MT, up slightly from the previous year. The United States is forecast 4 percent lower due in part to mildew problems from cool, wet weather early in the summer. Also the crop was two weeks behind normal which is expected to increase the drying ratio and reduce production. Offsetting these losses, Turkey is forecast 4 percent higher on favorable growing conditions following last year's excessive rains. China is forecast up nearly 10 percent as producers recover from last year's windstorm in Turpin, the primary growing region.

Global Raisin Production Up Slightly

Global raisin consumption is forecast to expand 4 percent to 1.1 million MT, driven mainly by China's rebounding domestic supplies. Europe, which consumes nearly one-third of the world's raisins, has seen little growth for the last few years on lackluster demand from food manufacturers, ingredient suppliers and institutional bakers.

Global exports are forecast up 4 percent to 731,000 MT on strong gains from the United States, Afghanistan, and South Africa. Slower expansion is forecast for Turkey and Iran stemming from modest growth in available supplies.

Global ending stocks are forecast to decline 5 percent to 100,000 MT. Since 2005/06, stocks have been cut in half, contributing to a 40 percent spike in unit values as measured by global imports.

Falling Stocks Push Unit Values Higher
