## Current Midwest Drought Summary (April 29,2021)

In the Midwest, a half inch of precipitation fell along the Ohio and Mid-Mississippi Rivers, parts of northern Ohio and Indiana, and central Minnesota to Upper Michigan. Parts of far northern Wisconsin had an inch or more. But much of the Ohio Valley states, and Iowa to Lower Michigan, had little to no precipitation this week. Streamflow, soil moisture, and 1- to 2-month SPI indicators prompted expansion of D0 in Illinois, Indiana, and Ohio, while D1 expanded in northern parts of Indiana and Illinois, across southern Wisconsin, into southeast Minnesota and northeast Iowa where deficits were mounting as seen in 1- to 4-month SPI values. D0 also expanded in the latter 3 states. D1 was expanded across Lower Michigan where precipitation deficits over the last 90 days have been building, streams are low, and soil moisture continues to dry. USDA statistics show 30% of the state is experiencing topsoil moisture that is short to very short (dry to very dry), an increase of 17% over the last week. The statistics increased to 34% in Iowa, 25% in Minnesota, and 21% in Wisconsin.
