September 9, 2020

Current Midwest Drought Summary (September 1, 2020)

Southern and western parts of the region fared much better than other areas. Dryness and drought decreased in a strip across central Wisconsin and southern Michigan, as well as large sections of Ohio. In contrast, drought expanded and deteriorated from central and southern Iowa eastward into northwestern Indiana. A sizable area in central and southwestern Iowa (where extreme drought expanded) received 6 to 10 inches less rain than normal during June-August while adjacent moderate to severe drought areas recorded shortfalls of 3 to 6 inches. Further, hot weather has been common this summer, and temperatures averaged 6 to nearly 12 degrees above normal the last two weeks, exacerbating the effects of the dryness and stressing some crops.
