October 21, 2020

Current Midwest Drought Summary (October 13, 2020)

Temperatures were warmer than normal in the Midwest this week, with the warmest readings (9 to 12 degrees above normal) taking place in Missouri, Iowa, and southwest Minnesota. Widespread rain of a half inch or more, with localized areas receiving 1-2 inches, fell from northwest Iowa through most of Minnesota, northern Wisconsin, and Michigan (excluding the far southern Lower Peninsula). Rain over a half inch also fell in the southeast half of Kentucky. Elsewhere, rainfall was generally scattered and light. Moderate drought developed in the St. Louis area, where short-term precipitation deficits grew amid warmer than normal temperatures. Severe and extreme drought grew in size in southwest Missouri as short-term precipitation deficits worsened. Moderate drought also increased in coverage in parts of Illinois and Indiana as short-term precipitation deficits grew and soil moisture decreased. Due to recent rainfall, severe and extreme drought conditions improved in far northwest Iowa, and moderate drought was reduced in coverage near the Minneapolis-St. Paul area.
