Commercial Vegetables

U. S. DEPARTMENT OF AGRICULTURE
AGRICULTURAL MARKETING SERVICE
CROP REPORTING BOARD

Washington, D. C.

Release: 3:00 PM (EST)
October 11, 1954

VEGETABLES FOR COMMERCIAL PROCESSING GENERAL SUMMARY OF PRELIMINARY ACREAGE AND INDICATED PRODUCTION OCTOBER 1, 1954

October 1 prospects for 9 important vegetables for commercial processing point to a total production of 5.23 million tons, according to the Crop Reporting Board. This compares with 6.03 million tons harvested in 1953 and an average of 5.30 million tons for the 1943-52 period. The 9 crops for which estimates are made as of October 1 usually account for about 92 percent of the tonnage of the 11 principal vegetables for commercial processing covered by the Crop Reporting Board in its regular program of reports.

The October 1 indicated production for the 9 crops is slightly below that estimated on the basis of conditions on September 1. The reductions indicated for green peas, pimientos and tomatoes more than offset the increased tonnage in prospect on October 1 for green lima beans, canning beets, kraut cabbage (contract) and sweet corn for processing.

The 1954 indicated tonnages of green peas for canning and freezing, winter and spring crop spinach and tomatoes for processing are below the 10-year averages for these crops. The prospective 1954 production of lima and snap beans, canning beets, kraut cabbage from contracted acreage, pimientos and sweet corn for processing are all above average.

GREEN LIMA BEANS FOR PROCESSING
 ACREAGE AND INDICATED PRODUCTION
 October 1, 1954 with comparisons

(Vegetables for Commercial Processing)

Growing conditions for green lima beans improved toward the end of the 1954 season, and on October 1 a total of 99,540 tons were indicated, according to the Crop Reporting Board. This compares with 106,550 tons obtained last year, and an average of 63,020 tons for the years 1943-52.

The yield indicated on October 1 is 1,797 pounds per acre (shelled basis). This compares with 1,942 pounds obtained last year and an average of 1,452 pounds for the 10-year period. California is the only important State failing to show some improvement in yield prospects during September.

TC-54: 1006 October 11, 1954

CABBAGE FOR KRAUT
(Contract only)
ACREAGE AND INDICATED PRODUCTION
October 1, 1954 with Comparisons

The indicated production on October 1 of cabbage for sauerkraut on acreage under contract to packers is 111,100 tons, according to the Crop Reporting Board. This compares with 129,150 tons in 1953 and the 10-year average of 90,400 tons harvested from contract acreage.

These estimates relate to production from acreage grown by kraut packers on their own or leased land as well as production from acreage grown under contract. They do not include the tonnage of open market purchases of cabbage for kraut manufacture for which no information is available at this time. An estimate of such purchases will be made in December. Last year kraut packers purchased 83,450 tons or about 39 percent of their total supplies on the open market. The 10-year average open-market purchases amount to 86,700 tons or about 49 percent of the total supplies for kraut.

The indicated yield on the contract acreage is 10.77 tons per acre. Last year 11.40 tons were obtained and the 1943-52 average is 9.56 tons. Ohio and New York State both showed some improvement during September in yield prospects for this season.

Included in this year's forecast of production of 491,400 tons for the early fall cabbage crop for fresh market and sauerkraut is 72,800 tons expected to be harvested from acreage under contract to kraut packers. Deducting this tonnage from the total early fall crop indicates 418,600 tons available for fresh market and for open market purchase by sauerkraut manufacturers. Of the total of 559,000 tons of early fall cabbage harvested in 1953, 87,800 tons were from contract acreage for kraut and 471,200 tons were available for fresh market and open market purchase by kraut packers. After making allowances for storage cabbage not marketed from the 1953 crop, it appears that early fall supplies available for fresh markets and for open market purchase by kraut packers this year are slightly smaller than the tonnage actually utilized by these outlets last year.

SWEET CORN FOR PROCESSING
ACREAGE AND INDICATED PRODUCTION
October 1, 1954 with Comparisons

(Vegetables for Commercial Processing)

Production prospects for sweet corn continued to improve during September, according to the Crop Reporting Board. On October 1, a total of 1,465,700 tons was indicated. This compares with 1,519,900 tons obtained last year and an average of 1,205,400 tons for the 1943-52 period.

The yield indicated on October 1 is 3.15 tons per acre. This compares with 3.00 tons obtained last year and a 10-year average of 2.59 tons per acre.

GREEN PEAS FOR PROCESSING
~~ACREAGE AND PRODUCTION~~

Preliminary Estimate, 1954 with Comparisons

(Vegetables for Commercial Processing)

A total of 397,920 tons of green peas for processing was harvested in 1954, according to the Crop Reporting Board. This compares with 464,190 tons in 1953 and an average production of 433,050 tons for the 1943-52 period.

The revised estimate of acreage planted to green peas for processing in 1954 is 51,200 acres. The preliminary estimate of acreage harvested is 422,960 tons. The difference between the planted and harvested acreage, 28,240 acres or about 5 percent, represents acreage from which no peas were harvested for canning, freezing or other processing in the fresh state.

This year's average yield per acre, at 1,882 pounds, compares with 2,155 pounds obtained in 1953 and an average of 2,004 pounds for the 1943-52 period.

The 1954 production of green peas for freezing is 112,520 tons. Last year, 129,010 tons were produced for freezing and in the preceding 10-year period, the average annual production utilized for this method of processing was 79,450 tons.

Production for canning and other processing in 1954 was 285,400 tons. This compares with 335,180 tons for 1953 and an average of 353,600 tons for the 1943-52 period.

PIMIENTOS FOR PROCESSING
 ACREAGE AND INDICATED PRODUCTION
 October 1, 1954 with Comparisons

(Vegetables for Commercial Processing)

The 1954 production of pimientos for processing in Georgia is expected to total 15,380 tons compared with 22,400 tons obtained in 1953 and the 1943-52 average production of 17,150 tons. This estimate, based on October 1 conditions, covers production on acreage contracted by Georgia processors in Georgia. In addition, 8,660 tons were indicated by October 1 conditions for other Southeastern States compared with 11,030 tons obtained last year.

Hot, dry weather throughout the Southeast has curtailed this year's yield and 0.81 tons per acre were indicated on October 1 this year compared with 1.26 tons obtained in 1953.

TOMATOES FOR PROCESSING
ACREAGE AND INDICATED PRODUCTION
October 1, 1954 with Comparisons

(Vegetables for Commercial Processing)

October 1 reports received by the Crop Reporting Board from tomato canners and products manufacturers indicate that the 1954 production of tomatoes for processing will total 2,573,550 tons. This compares with 3,228,830 tons obtained last year and an average of 3,038,600 tons for the 1943-52 period.

The October 1 indicated yield is 9.70 tons per acre, well below the average of 10.94 tons per acre harvested in 1953 but considerably above the average of 6.99 tons for the preceding 10-year period.
