ANNOUNCEMENT.

THIS is No. 2 of a series of statistical bulletins to be published by the United States Department of Agriculture. Bulletins are in preparation and will appear in succession throughout the year, giving statistics relating to cold storage holdings of certain food products; horses, mules, and tractors; sheep, lamb, mutton, and wool statistics; vegetable statistics; seed statistics; fruit statistics; potato statistics; carlot shipments of fruits and vegetables; wheat statistics; tobacco statistics; rye, oats, barley, rice, buckwheat, grain sorghums and flax statistics; cotton statistics; hay and feed statistics; cattle, calves, beef, veal, hides and skins statistics; hogs and pork statistics; corn statistics; dairy and poultry statistics.

UNITED STATES DEPARTMENT OF AGRICULTURE
STATISTICAL BULLETIN NO. 2

WASHINGTON, D. C.

APRIL, 1924

SEED STATISTICS.

Year Ended May 31, 1923.

With Comparable Data for Earlier Years.

Prepared by the Bureau of Agricultural Economics.¹

INTRODUCTION.

This bulletin includes statistics of seeds produced primarily for planting and for oil production. The statistics have been compiled from records of the Hay, Feed, and Seed Division, and the Division of Crop and Livestock Estimates of the Bureau of Agricultural Economics and from records of the Bureau of the Census and of the Bureau of Foreign and Domestic Commerce of the Department of Commerce.

The seed statistics credited to the Hay, Feed, and Seed Division were obtained in connection with outlook, movement, price, shipment, and other reports received by the seed reporting service project of that division. Since the fall of 1917 this project has kept seed growers, shippers, and dealers informed from harvest time until seed reaches seedsmen at large distributing points relative to the size of the important kinds of seed crops, movement from growers, prices paid to growers, and stocks and shipments of country shippers. During the spring selling season weekly reviews covering briefly the general situation with respect to the supply of and demand for important kinds of seeds, together with prices, have been published to aid the thousands of farmers and dealers who buy the bulk of their seeds at that time.

During the World War national seed surveys were made twice a year, but with the expiration after the war of authority to obtain

¹ Prepared under the direction of J. J. Window, jr. in the Market Statistics Section, Lewis B. Flohr, in charge.

figures on a compulsory basis all of the surveys pertaining to actual stocks and receipts of seeds by seedsmen were discontinued. The vegetable seed acreage, condition, yield, and production surveys, however, have been continued with fair degree of satisfaction on a voluntary basis.

Price tables headed "Average price per 100 pounds paid to growers" have been compiled from hundreds of reports received from country shippers in the leading producing sections.

"Weekly wholesale selling price per 100 pounds at 11 markets" and "Monthly average wholesale prices per 100 pounds at leading markets" have been compiled from paid and voluntary correspondents at these markets. The prices are for best grades of seed and are given over a period during which the active spring seed-selling season occurs.

"Retail selling price per 100 pounds in United States, by sections" has been obtained from data furnished monthly from about March 1 to June 1 by hundreds of retail seed dealers throughout the United States and represent prices that dealers charged farmers for seed in quantities usually purchased by farmers.

"Comparative stocks and shipments" have been compiled from reports submitted by country shippers who purchased the bulk of the seed handled by them directly from growers. Although many more shippers furnished reports than indicated in the tables, many of these reports were omitted from the tabulation because they were incomplete. Although the figures presented are incomplete, they are comparable and serve as an indicator of the relative size of stocks and shipments for the two years. These data as well as practically all other seed data since the end of the World War have been obtained on a voluntary basis.

The table "Forage plant seed: Imports into the United States, 1911-1922" was compiled by the seed laboratory of the Bureau of Plant Industry from records obtained in connection with the enforcement of the seed importation act.

"Average wholesale price per pound of standard varieties of vegetable seeds" has been compiled from special trade price catalogues or lists issued by a selected list of leading wholesale vegetable seedsmen and commercial vegetable seed growers.

"Retail catalogue prices of standard varieties of vegetable seeds" have been compiled from catalogues issued by a selected list of leading retail mail-order vegetable seedsmen. The prices represent standard varieties and do not include prices for so-called novelties.

"Vegetable seeds: Commercial acreage planted for seed, by States" and "Commercial acreage, average yield per acre, and production in the United States" have been compiled from reports furnished by nearly all of the commercial vegetable seed growers on a compulsory basis during the war and since on a voluntary basis.

Seed Statistics.

² Preliminary.

Note.—Both the census figures and the crop estimates figures are given for the year 1919. Discrepancies will be noted; the most significant is in the case of Kentucky for 1919 for which the census figure amounts to 462,420 pounds for all clover and alfalfa, whereas the estimate is 2,280,000 pounds for all clover. This is an extreme case. The figures in other States agree more closely than this. It is believed that the census fails to receive complete returns on the production of grass seeds which is a minor crop, as the enumerator may even fail to ask the farmer about the minor crops and the farmer himself may forget about the few bushels of clover seed that he has produced. There may also be confusion of the terms red clover and crimson clover. If the complete account could be had, of course the census is to be taken in preference to the estimate.
