Direct Hay Weighted Average Report for week ending 4/30/2021

Volume		
	This Week	Last Reported ( )

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Compared to the last report: Hay prices are firm to 10.00 higher. According to the US Drought Monitor, dry or very dry soils grew in area to 67% of Texas. According to USDA statistics, 43% of the winter wheat crop in Texas was in poor to very poor condition. In the Midland-Odessa, Texas, area, 2020-2021 had the driest 13-month April-April period on record. Additionally, falling levels of the Edwards Aquifer triggered water restrictions in several Texas communities, including San Antonio, New Braunfels, and San Marcos. Some relief was found in the form of rain with a half inch or more falling across the rest of the South, and 2+ inches in streaks across eastern Oklahoma and Texas. Increases in prices are indicative of shortening supplies before first cutting and poor pasture conditions across much of the state causing producers to offer supplemental feeding.

\*\*\*Due to limited sales and price changes this report will be released bi-weekly until more volumes of hay is moving.\*\*\*

\*\*\* The next report release will be May 14th\*\*\*

Central						
Hay (Conventional)						

### Alfalfa - Premium/Supreme (Ask/Per Ton)

	Qty	Price Range	Wtd Avg	Freight/Use	Description	Crop Age
