

total potato stocks

February 1, 1972

Release:
February 11, 1972
3:00 P. M. EST

Storage stocks of Irish potatoes for all uses held by growers, local dealers, and processors in fall producing areas totaled 121.8 million hundredweight on February 1, 1972, according to the Crop Reporting Board. This is only slightly less than the 121.9 million cwt. on hand for all uses a year earlier, but 10 percent more than the 111.2 million of February 1, 1970.

Stocks in the eight eastern States, at 32.2 million cwt. were 3 percent above last year's holdings of 31.2 million cwt. Maine stocks of 24.8 million cwt. compare with 23.5 million cwt. on hand a year earlier. There were fewer potatoes on hand than a year earlier in Upstate New York, and in Pennsylvania, but Long Island supplies were larger.

February 1 stocks in the eight central States totaled 26.0 million cwt. this year, 13 percent more than the 23.1 million in 1971. Minnesota had 8.3 million cwt., compared with 6.3 million cwt. a year ago. North Dakota stocks were 9.5 million cwt. compared with 8.9 million cwt. last year. Stocks in Wisconsin of 3.9 million cwt. were 11 percent more than last year, Michigan at 2.5 million cwt., was down 15 percent from a year earlier.

In the eight western States February 1 holdings totaled 63.6 million cwt., down 6 percent from last year at 67.6 million cwt. Idaho stocks, of 40.5 million cwt., equaled the year earlier level. Washington stocks, at 10.4 million cwt., were down from 12.5 million a year earlier. Stocks in California and Wyoming continue above a year ago levels, but in the other western States were below a year ago.

Disappearance to February 1 from the 1971 fall production of 249.9 million cwt. was 128.1 million cwt., compared with 130.9 million cwt. for the 1970 crop and 127.3 million cwt. from the 1969 crop.

Movement of the 1971 fall potato crop to fresh market and chippers through January 31, as indicated by rail and truck unloads, was less than a year earlier. More potatoes from the 1971 fall crop were used for processing, excluding chips for the season through January 31, 1972, than during the corresponding 1970-71 period. However, January 1972 usage for processing was less than a year earlier.

Sales of fall potatoes for all purposes--including fresh market, processing, seed, and livestock feed has accounted for about 88 percent of the fall production in recent years. The balance of the crop disappearance is from shrinkage and waste and used for seed on farms where grown, livestock feed, and food.

**Fall Potatoes: Production, December 1, January 1, February 1 and March 1
total stocks, crops of 1960-71 in the fall States**
