## U.S. Citrus Utilized Production

Million Tons

## U.S. Citrus Value of Production Packinghouse-door equivalents

Billion Dollars

## Citrus Utilized Production Down 13 Percent, Value Up 8 Percent

Citrus utilized production for the 2006-07 season totaled 10.3 million tons, down 13 percent from the 2005-06 season and 42 percent lower than the record high production of 17.8 million tons for the 1997-98 season. Florida accounted for 70 percent of total U.S. citrus production, California totaled 25 percent, while Texas and Arizona produced the remaining 5 percent.

Florida's orange production, at 129 million boxes, is down 13 percent from the previous season. Grapefruit utilization in Florida, at 27.2 million boxes, is up 41 percent from last season's utilization. Florida's total citrus utilization decreased 8 percent from the previous season and is 5 percent below the 2004-05 season. Bearing acreage, at 554,400 acres, is 22,000 acres below the 2005-06 season. This is the lowest bearing acreage since the 1989-90 season.

Utilized citrus production in California fell 27 percent from the 2005-06 season. California's all orange production, at 45.0 million boxes, is 26 percent lower than the previous season. Grapefruit production, at 4.00 million boxes, is down 33 percent from the 2005-06 season. Utilized production of citrus in Texas is up 33 percent from the 2005-06 season. Orange production is up 16 percent from the previous season and grapefruit production increased 37 percent. Arizona's total citrus production is down 35 percent from last season. Production of oranges and lemons are down 33 and 34 percent, respectively, while grapefruit utilized production is unchanged from the 2005-06 season.

The value of the 2006-07 U.S. citrus crop is up 8 percent from last season, to \$2.95 billion (packinghouse-door equivalent). Total value of production for 2006-07 is higher for oranges, tangerines, and tangelos, and lower for grapefruit and lemons. Orange value of production increased 15 percent from last season, while grapefruit value decreased 18 percent. Tangerine value of production increased 2 percent from last season. Lemon value of production decreased 2 percent. Tangelo value is up 20 percent from the previous season. Beginning with the 2006-07 season, Temple production and value is included in the early, midseason, and navel component of Florida's orange estimates.

Overall comparisons discussed above are based on like fruit types. The revised production and utilization estimates are based on all data available at the end of the marketing season, including information from marketing orders, shipments, and processor records. Allowances are made for recorded local utilization and home use. Estimates for the 2006-07 California Valencia oranges and grapefruit are preliminary, since the marketing season is not complete at publication time. Revisions to the utilized production estimates for all citrus for the 2006-07 season will be published in the April 2008 *Crop Production*.

## Citrus Prices

Revised State and U.S. monthly average prices and equivalent returns, and marketing year average prices for the 2004-05, 2005-06, and 2006-07 citrus crops are shown on the following pages. Revised monthly prices refer to all fruit sold in a given month regardless of the crop year in which the fruit was harvested.

Marketing year average prices refer to the prices received by growers for the entire marketing season for any one crop year. The crop year 2006-07 as shown on all citrus tables in this publication refers to the crop which bloomed in 2006 and was marketed during the 2006-07 season. For example, the 2006-07 marketing year average price received by California growers for tangerines refers to marketings from November 2006 through May 2007. In some years the season may vary a month or two but a price was estimated only for those months with sufficient movement.

Monthly and marketing year average prices are weighted by box size at the U.S. level for grapefruit, oranges, and tangerines. See page 46 for approximate net contents per box at the State level.

Citrus prices are based on weighted average F.O.B. packed prices received for fresh fruit and weighted average prices received at the processing plant door for processing fruit. Equivalent returns for fresh and processed fruits are calculated at the packinghouse-door level and on-tree level by deducting hauling, picking, sorting, grading, packing, cooling, marketing, and other costs from the two base prices. In some cases, this results in negative returns.

## Marketing Year Average Prices and Value of Production

State level marketing year average (MYA), or price per box, for fresh and processed sales are the weighted average of monthly sales that occur during a crop's marketing season, adjusted to the packinghouse-door level. The "all" sales MYA price is derived by dividing the "all" sales value by the "all" sales boxes. MYA prices at the U.S. level for commodities with different State box weights are computed as follows:

$$\text{Fresh Market MYAP} = \frac{\sum(\text{State Fresh Value} * \text{State Box Weight})}{\sum(\text{State Fresh Boxes} * \text{State Box Weight})}$$

$$\text{Process Market MYAP} = \frac{\sum(\text{State Process Value} * \text{State Box Weight})}{\sum(\text{State Process Boxes} * \text{State Box Weight})}$$

$$\text{"All" Sales MYAP} = \frac{\sum(\text{State All Value} * \text{State Box Weight})}{\sum(\text{State All Boxes} * \text{State Box Weight})}$$

For commodities with the same box weights across all States, the U.S. MYAs are derived by dividing the sum of States' values by the sum of States' boxes.

U.S. value of production for a given commodity is the sum of the State's values for that commodity. The State level value of production for each commodity is computed as follows:

$$\text{Fresh Market Value} = \text{Fresh Market MYAP} * \text{Fresh Market Boxes}$$

$$\text{Process Market Value} = \text{Process Market MYAP} * \text{Process Market Boxes}$$

$$\text{"All" Sales Value} = \text{Fresh Market Value} + \text{Process Market Value}$$

Citrus prices are based on weighted average F.O.B. packed prices received for fresh fruit and weighted average prices received at the processing plant door for processing fruit. Equivalent returns for fresh and processed fruit are calculated at the packinghouse-door level by deducting sorting, grading, packing, cooling, marketing, and other costs from the two base prices. In some cases, this results in negative returns.

## **USDA Data Users' Meeting**

**October 29, 2007**

**Crowne Plaza Chicago O'Hare**

**Rosemont, Illinois**

**(847) 671-6350**

The USDA's National Agricultural Statistics Service will be organizing an open forum for data users. The purpose will be to provide updates on pending changes in the various statistical and information programs and seek comments and input from data users. Other USDA agencies to be represented will include the Agricultural Marketing Service, the Economic Research Service, the Foreign Agricultural Service, and World Agricultural Outlook Board. The Foreign Trade Division from the Census Bureau will also be included in the meeting.

For registration details or additional information for the Data Users' Meeting, see the NASS homepage at [www.nass.usda.gov/forum/](http://www.nass.usda.gov/forum/) or contact Marjorie Taylor (NASS) at (202) 690-8141 or at [marjorie\\_taylor@nass.usda.gov](mailto:marjorie_taylor@nass.usda.gov).

This Data Users' Meeting precedes an Industry Outlook meeting that will be held at the same location on October 30, 2007. The Outlook meeting brings together analysts from various commodity sectors to discuss the outlook situation. For registration details or additional information for the Industry Outlook Meeting see the Livestock and Marketing Information Center (LMIC) homepage at [www.lmic.info](http://www.lmic.info) or contact Jim Robb at (720) 544-2941 or at [robb@lmic.info](mailto:robb@lmic.info).
