UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF AGRICULTURAL ECONOMICS

October 15, 1953

TURKEYS TESTED BY STATES AND BY MONTHS, 1952-53

This is the first of a new series of monthly reports that will be released by the Department on the number of turkeys tested for pullorum disease. The data presented in this report are taken from records of State agencies testing for pullorum disease. The report shows the number of turkeys tested by light and heavy breeds by months and by States for the period July 1952 through September 1953. This report is made possible through the State testing agencies in cooperation with the National Turkey Improvement Plan, Bureau of Animal Industry and the Bureau of Agricultural Economics.

The report is part of the Department's expanded program for turkey statistics and provides current indications of the monthly and annual changes in number of turkeys kept for breeders.

The testing program was off to an early start this year. Turkeys tested for pullorum disease during July, August and September this year by Official State Agencies totaled 339,290 -- 38 percent more than during the 3 months last year. Testings during July were 61 percent larger, August testings 51 percent larger and September testings 29 percent larger than last year. Of the total number of birds tested 43 percent were heavy breeds and 57 percent light breeds.

Heavy breed turkeys tested during July, August and September totaled 144,468 -- 5 percent more than during the 3 months last year. Heavy breed birds tested in July showed an increase of 115 percent. Testings were 26 percent smaller in August but 14 percent larger in September, compared with last year.

Light breed turkeys tested during July, August and September totaled 194,822 -- an increase of 80 percent from last year. July testings increased 47 percent, August testings 235 percent and September testings 49 percent.

Testings during July, August and September this year were the heaviest in California, Virginia, Texas, Minnesota, Oregon and South Carolina, ranking in the order named. These 6 States have tested about 3/4 of all the birds tested so far. California, South Carolina, Oregon, Texas and Minnesota lead in testings of heavy breed turkeys, while Virginia, Texas, Minnesota, Missouri, California and Oregon lead in the testings of light breed turkeys.
