

Cotton: World Markets and Trade

2018/19: Lower Stocks, Higher Consumption, Production Since Outlook Forum Forecast

*Note: Graph represents the February Outlook forecast compared to the same year's November projection. For example, 2014/15 compares the 2014 February's Outlook projection to November of 2014 (forecast 9 months later).

The current USDA forecast shows global 2018/19 production at 119.4 million bales, down 3.5 percent from the previous season. At the USDA Agricultural Outlook Forum in February 2018, production was forecast at 117.0 million bales. Much of the increase is attributed to better-than-expected crops in Brazil, China, and Turkey.

Global use is also higher than originally forecast. Consumption is currently projected at 126.9 million bales, up 2.9 percent from the previous season, whereas the February Outlook forecast had consumption increasing only 2.0 percent. Forecasts have edged up in most major markets as higher polyester prices have made cotton more competitive, and global macroeconomic conditions have supported higher end use.

While the higher production forecast mostly offsets higher consumption, global ending stocks are now forecast at 72.6 million bales, 10.1 million lower than the 82.7 million shown at the Outlook forum. Nearly all the reduction in 2018/19 stocks is due to lower estimates for 2017/18 ending stocks, driven largely by historical revisions in October to several countries' balance sheets, particularly India's. In addition to lower stocks, the current forecast shows a greater decline in those stocks during the current season. Global stocks are now forecast to fall by 7.8 million bales compare with the 5.8-million-bale decline expected last February.

China's ending stocks are now forecast at 29.9 million bales, 8.2 million lower than beginning stocks. This compares to a 7.3-million-bale decline seen in February's initial forecast. As polyester prices have risen, and China's internal cotton prices have moved closer to world prices in 2018, consumption has expanded and resulted in higher consumption in both 2017/18 and 2018/19. This results in a drawdown of China's stocks. Ending stocks outside of China, however, are now forecast up 400,000 bales versus the 1.4-million-bale increase expected in February. Bottom line: China's stocks are projected to continue to trend lower, while stocks outside of China expand, albeit slightly, for the fourth consecutive year.

Overview

Production for 2018/19 is forecast down, led by the United States, India, and Pakistan, offsetting higher production in Benin. Trade is projected down slightly. Global use is down, with reductions in most major markets. The U.S. season-average farm price is raised 1 cent to 74 cents/pound.

For 2017/18, beginning and ending stocks are down due to historical revisions, primarily in Benin. The U.S. balance sheet is unchanged. The final U.S. season-average farm price is revised up slightly to 68.6 cents per pound.

For current prices received by farmers click here; [NASS farm price](#)

Prices

The A-index and the spot price have both ticked up marginally as crop development in certain Northern Hemisphere countries has experienced difficulties and as concerns over weakening demand have pressured prices.

For more information on U.S. spot price click here; [AMS Cotton Market News](#)

2018/19 TRADE OUTLOOK
