

# Cotton: World Markets and Trade

## Prices Rise Despite Smaller Reduction in Projected Global Stocks

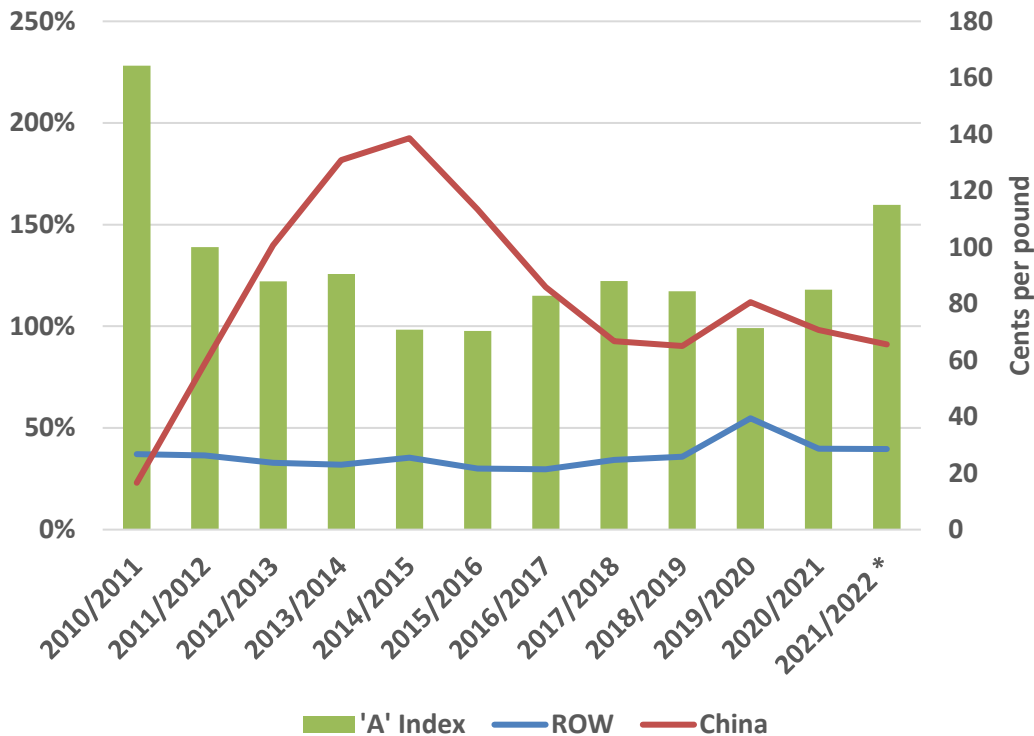

Both the A-Index and New York futures prices have experienced exuberant rallies in recent months, reaching levels well above \$1.00 per pound. From the time of USDA's first forecast for MY 2021/22 in February 2021 through September, the A-Index surged roughly 15 cents from the mid 80-cent range, coinciding with a tightening of world stocks in USDA's projected balance sheet.

The February forecast for global 2021/22 ending stocks was 2.5 million bales lower than the previous year, with China accounting for roughly one-half of the downfall in global stocks. By September, the decline in stocks had increased to 4.5 million bales, with China accounting for nearly all of the downfall, as expectations improved for recovery from the impacts of COVID.

USDA forecasts in October and November both show smaller reductions in world stocks as global production expanded, primarily in Brazil, Australia, Pakistan, and Turkey. Coupled with lower global use in key markets, particularly in China and Vietnam, this has resulted in higher ending stocks than previously expected. Despite the outlook for higher ending stocks than previous USDA forecasts, prices have surged over the last 2 months with the A-Index reaching nearly \$1.30, the highest level in 10 years.

## Stocks-to-Use Ratio and the A-Index

\*Note: 2021/2022 is a forecast

Compared to recent years, the USDA forecast for the marketing year average for the A-Index is relatively high (\$1.17 cents per pound) relative to the stocks-to-use ratios for both China and the rest of the world. The last time the A-Index averaged above \$1.00 was in 2010/11 when China's stocks-to-use ratio was 23 percent compared with 91 percent forecast for 2021/22; stocks-to-use for the rest of the world was 37 percent compared with 40 percent for 2021/22. In 2010/11, the A-Index rose from the mid-80s in August to \$1.30 per pound in late October before peaking at \$2.40 in April 2011. The A-Index lost half its value within the next 4 months.

### 2021/22 Outlook

Global production is raised with larger crops in Brazil, Australia, and Pakistan, more than offsetting a lower crop in Greece. Use is raised in India, Pakistan, Mexico, and Bangladesh, but less than the increase in production. Beginning and ending stocks are lower. Trade volume is raised slightly.

U.S. production is raised 200,000 bales to 18.2 million. Exports and use are unchanged, with ending stocks up 200,000 bales. The U.S. season-average farm price is unchanged at 90 cents per pound.

For current prices received by farmers click here: [NASS farm price](#).

## Weekly Average of Daily Cotton Prices

**Note:** **A-Index** is the average of the five cheapest quotations (quality being Middling 1<sup>1/8</sup>) for Cost and Freight (CFR) at a Far Eastern Port (more info [here](#)); **U.S.** is the simple average of spot quotations reported by the Agricultural Marketing Service (more info [here](#)); **China** is the reported China Cotton Price Index (i.e. CCIndex 3128B) and reflects the national weighted average of cotton (3128B grade) delivered to more than 200 enterprises in China; **India** is the Shankar-6 (grade 29-3.8-76) spot price reported [here](#); **Brazil** is the delivered price in São Paulo city (grade strict low middling).

### Changes Since October *WASDE* (cents per pound)

	A-Index	U.S.	China	India	Brazil
11-Oct	119.3	106.6	152.6	99.8	108.5
5-Nov	125.5	113.2	157.9	115.2	109.5
<b>Change</b>	<b>6.2</b>	<b>6.7</b>	<b>5.3</b>	<b>15.4</b>	<b>1.0</b>

Global cotton prices rose since last month's *WASDE* following upward movements on the Intercontinental Commodity Exchange's December 2021 contract and strong global demand for nearby and available supplies. Spot prices in Gujarat (India) climbed more than 15 cents to exceed U.S. spot prices (Gujarat prices were roughly 7 cents cheaper than U.S. last month). Strong domestic and global demand for Indian cotton, coupled with lower supplies relative to last year, have helped to strengthen prices. China's spot prices remain significantly elevated relative to other origins despite robust sales from the State Reserve. More than 4.5 million bales have sold this year with the 2021 sales program set to expire later this month.
