Summary

U.S. Value of Production and Sales Down 5 Percent

The combined value of production from broilers, eggs, turkeys, and the value of sales from chickens in 2006 was \$26.8 billion, down 5 percent from the \$28.2 billion in 2005. Of the combined total, 70 percent was from broilers, 16 percent from eggs, 13 percent from turkeys, and less than 1 percent from chickens.

U.S. Value of Broiler Production Down 10 Percent

The value of broilers produced during 2006 was \$18.9 billion, down 10 percent from 2005. The total number of broilers produced in 2006 was 8.88 billion, up slightly from 2005. The total amount of live weight broilers produced in 2006 was 48.8 billion pounds, up 2 percent from 2005. The 2006 average price per pound on a live weight equivalent basis was 38.6 cents per pound, compared with 43.6 cents in 2005.

U.S. Value of Egg Production Up 8 Percent

Value of all egg production in 2006 was \$4.39 billion, up 8 percent from the \$4.05 billion in 2005. Egg production totaled 90.9 billion eggs, up 1 percent from the 90.0 billion eggs produced in 2005. In 2006, all eggs averaged 57.9 cents per dozen, compared with 54.0 cents in 2005.

U.S. Value of Turkey Production Up 12 Percent

The value of turkeys produced during 2006 was \$3.55 billion, up 12 percent from the \$3.18 billion the previous year. Turkey production in 2006 totaled 7.42 billion pounds, up 5 percent from the 7.10 billion pounds produced in 2005. The average price received by producers during 2006 was 47.9 cents per pound, compared with 44.9 cents in 2005.

U.S. Value of Sales from Chickens Down 18 Percent

The value of sales from chickens (excluding broilers) in 2006 was \$53.1 million, down 18 percent from the \$64.7 million a year ago. Prices averaged 5.8 cents per pound, compared with 6.5 cents in 2005. The number of chickens sold in 2006 totaled 172 million, down 11 percent from the total sold during the previous year.

This report contains annual estimates for **Puerto Rico** chickens and eggs. These estimates include chickens (excluding commercial broilers) number lost, sold for slaughter, pounds, price, and value as well as all egg production, price, and value.

Reliability of Poultry Production and Value Estimates

Survey Procedures: These estimates were based on inventory, disposition, production, and price estimates as published in various NASS poultry and agricultural prices reports, as well as information on imports, exports, and slaughter obtained from other sources. Individual NASS field offices maintain a list of all known poultry operations and use known sources to update their lists. Data are collected from all known broiler hatcheries and turkey grow-out operations. Also, data are collected from layer and egg contractors and independent producers who have at least 30,000 table egg layers, flocks of hatchery supply layers, or pullet only operations with at least 500 pullets. In every situation, operations are contacted as close to the reference date as possible and given adequate time to respond via mail, fax, or EDR. Those that do not respond are contacted by phone. Care is exercised to ensure that all operations of interest are accounted for in the estimate.

Estimation Procedures: Sound statistical methodology is employed to derive the estimates from reported data. All data are analyzed for unusual values. Data from each operation are compared to their own past operating profile and to trends from similar operations. Data for missing operations are estimated based on similar operations or historical data. NASS field offices prepare these estimates by using a combination of survey indications and historic trends. Individual State estimates are reviewed by the Agricultural Statistics Board for reasonableness. State and U.S. totals are summed for each poultry item of interest.

Revision Policy: Revisions to previous estimates are made to improve estimates and are generally the result of late or corrected data. For all species, previous year estimates are subject to revision when the current year estimates are made. Five years of estimates are also reviewed after the Census of Agriculture data are available. Estimates are considered final after Census review and no revisions are made after the final estimates are published.

Reliability: Estimates in this report have no sampling error since they are based on a census of all known contractors and independent producers who have at least 30,000 table egg layers, flocks of hatchery supply layers, pullet only operations with at least 500 pullets, all known broiler hatcheries, and all known turkey grow-out operations. However, estimates are subject to errors such as omission, duplication, and mistakes in reporting, recording, and processing the data. While these errors cannot be measured directly, they are minimized through strict quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
