Coffee: World Markets and Trade

2016/17 Forecast Overview

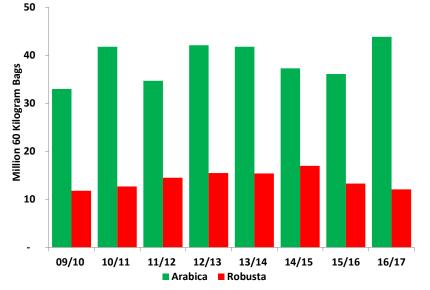

World coffee production for 2016/17 is forecast to rise 2.4 million bags from the previous year to 155.7 million bags (60 kilograms) as record Arabica output in Brazil more than offsets lower Robusta production in Brazil, Vietnam, and Indonesia. As a result, world Arabica output is expected to rebound to 60 percent of total production after being below this level the previous 5 years. Global consumption is forecast at a record 150.8 million bags, drawing ending inventories to a 4-year low. World exports are expected to slip from last year's record primarily due to lower shipments from Indonesia, Vietnam, and Brazil.

Brazil's Arabica production is forecast to jump 7.8 million bags to a record 43.9 million as yields improve. Good blossoming between September and November 2015 was followed by ideal weather during the fruit-set and fruit development period in Minas Gerais and Sao Paulo, two regions that account for about 80 percent of output. Robusta production is expected to drop 1.2 million bags to a 7-year low of 12.1 million due to above-average temperatures and prolonged dry spells in Espirito Santo, where the vast majority is grown. Water shortages continue to limit irrigation, a common practice in the state. The combined Arabica and

World Arabica Production Ratio Forecast to Rebound

Brazil's Arabica Production Forecast at Record, Robusta to Drop Again

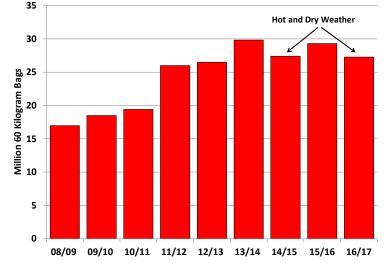

Robusta harvest is forecast to expand 6.6 million bags to 56.0 million. However, with slightly reduced total supplies due to lower beginning stocks, bean exports are expected to slip 700,000 bags to 32.0 million and ending stocks are forecast nearly unchanged at 2.5 million bags.

For email subscription, click here to register: http://www.fas.usda.gov/data/coffee-world-markets-and-trade

Vietnam's production is forecast to decline 2.0 million bags to 27.3 million as high temperatures combined with dry growing conditions between January and April 2016 to weaken yields. Cultivated area is forecast nearly equal to last year, and over 95 percent of total output is Robusta. Following 2 years of elevated inventories, ending stocks are expected to fall 2.2 million bags to 3.5 million, and bean exports are forecast 850,000 bags lower to 25.2 million.

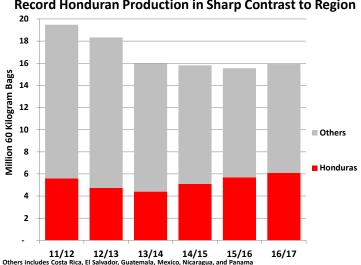

Colombia's Arabica production is forecast down 300,000 bags to 13.3 million due to expected heavy rains towards the end of

Weather Related Problems to Interrupt Vietnam's Growth Again

2016. This will likely affect the *mitaca* crop by disrupting the flowering process as well as creating conditions conducive to the spread of coffee rust for trees not renovated to resistant varieties. The mitaca crop typically accounts for about 40 percent of total output and is harvested from the central coffee region between April and June. Also, coffee cherry borer insect infestations in this region are expected to more than double to 10 percent of planted area, reducing yields and quality. Despite this, bean exports, mostly to the United States and Europe, are forecast to gain 100,000 bags to 11.5 million.

Central America and Mexico account for over 15 percent of the world's Arabica production, and coffee rust continues to hamper output for most of these countries. Although the region's production is forecast to add 400,000 bags to total 15.9 million, the rebound is mostly limited to Honduras where rust-resistant trees from recently renovated land are expected to propel output to a record 6.1 million bags. Nicaragua is forecast 100,000 bags higher to 2.1 million as a result of good weather during bloom as well as the addition of output from recently renovated land. Costa Rica, El Salvador, Guatemala, and Mexico are flat at 1.4 million bags, 525,000 bags, 3.4 million bags, and 2.3 million bags,

Record Honduran Production in Sharp Contrast to Region

respectively, as these countries continue to struggle with rust and output remains below their pre-rust level. Bean exports for the region are forecast to gain 400,000 bags to 13.3 million mainly due to higher exportable supplies in Honduras. Approximately 40 percent of the region's exports are destined for the United States, followed by 35 percent to the European Union.

Indonesia's production is forecast to drop 1.8 million bags to 10.0 million due to severe drought throughout much of the archipelago. Dry weather disrupted the flowering and ripening stage of cherry formation and was most acutely felt in lowland areas of Southern Sumatra and Java where approximately 75 percent of the Robusta crop is grown. Arabica production, situated in Northern Sumatra, was mostly unaffected by these conditions. Bean exports are forecast to plunge 1.9 million bags to 6.1 million on lower available supplies.

Ethiopia's Arabica production is forecast at 6.5 million bags where it has remained nearly unchanged the last 5 years. Similarly, bean exports are forecast unchanged at 3.5 million bags, with the remainder consumed domestically.

India's production is forecast to ease 100,000 bags to 5.2 million following a similar decline the previous year. Dry conditions during the flowering and fruit-set period weakened yields for both Arabica and Robusta output. Bean exports are forecast down 200,000 bags to 3.6 million.

The **European Union** accounts for over 40 percent of the world's coffee bean imports and is forecast down 500,000 bags to 44.5 million. Top suppliers include Brazil (33 percent), Vietnam (23 percent), Honduras (6 percent), and Colombia (6 percent). With consumption rising 800,000 bags to 43.9 million, ending stocks are expected slightly lower at 11.8 million bags.

The **United States** imports the second-largest amount of coffee beans and is forecast nearly unchanged at 24.6 million bags. Top suppliers include Brazil (30 percent), Colombia (21 percent), and Vietnam (13 percent). Consumption is expected to gain 400,000 bags to 25.2 million, drawing ending stocks down slightly to 5.8 million bags.

Revised 2015/16

World **production** is revised up from the December estimate by 3.2 million bags to 153.3 million.

- China is now included in the database as a producer and is estimated at 2.1 million bags.
- Indonesia is revised 1.1 million bags higher to 11.8 million due to ideal weather during the flowering and cherry ripening period.
- Uganda is raised 700,000 bags to 4.5 million on higher-than-anticipated yields following the previous year's damaging drought.
- Mexico is revised down 900,000 bags to 2.5 million due to coffee rust.

World **bean exports** are raised 6.4 million bags to 112.9 million.

- Brazil is revised up 2.7 million bags to 32.7 million on strong U.S. and European demand.
- Indonesia is raised 2.5 million bags to 8.0 million on greater exportable supplies and strong demand from Malaysia and Thailand's soluble sector.
- China is now included in the database as an exporter and is estimated at 1.1 million bags.
- Vietnam is down 700,000 bags to 26.0 million as suppliers have preferred to build inventories.

World **ending stocks** are lowered 1.3 million bags to 35.4 million.

- Brazil is down 2.9 million bags to 2.3 million due to higher exports.
- Vietnam is up 1.5 million bags to 5.7 million on slower-than-anticipated shipments.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples. Coffee marketing year for non-producer countries begins in October. Roasted coffee was converted to green bean equivalent by multiplying the net weight of roasted coffee by 1.19. Soluble coffee was converted to green bean equivalent by multiplying the net weight of soluble coffee by 2.6. For each non-producing country, the trade balance between imports and exports is used in order to avoid double-counting for these figures.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples. Coffee marketing year for non-producer countries begins in October. Roasted coffee was converted to green bean equivalent by multiplying the net weight of roasted coffee by 1.19. Soluble coffee was converted to green bean equivalent by multiplying the net weight of soluble coffee by 2.6. For each non-producing country, the trade balance between imports and exports is used in order to avoid double-counting for these figures.
