# U.S. Agricultural Trade Update 

Nora Brooks, coordinator

## U.S. Agriculture Ends Calendar Year 2006 With Record Trade: Exports at $\$ 71$ billion, Imports at $\$ 65$ billion

The value of U.S. agricultural exports for calendar year 2006 is a record $\$ 70.993$ billion. This is nearly $\$ 8$ billion higher than in 2005. Grains accounted for most of the increase, notably from corn as the value of corn exports rose 47 percent over 2005. Red meat exports showed the next strongest growth over last year, at just over 20 percent. The volume of corn shipments rose 27 percent above 2005 levels, with Japan, Mexico, and South Korea continuing to account for more than half of U.S. corn shipments; more than half the December shipments went to Japan and Mexico. Bulk product exports are up 16 percent over last year while high-value products increasing about 10 percent.

The value of U.S. agricultural imports for calendar year 2006 is a record $\$ 65.3$ billion, roughly $\$ 6$ billion higher than 2005 . Most of the increase comes from grains, fruits, vegetables, and sugar, although there were continued increases in imports of vegetable oil, wine, malt beverages, live animals, and rubber. Sugar shipments are up 25 percent above 2005 levels. Just under half of our fresh or frozen fruit imports come from Mexico and Chile. More than half of U.S. fresh or frozen vegetable imports come from Mexico and Canada.

## U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors ${ }^{1}$. Each farm export dollar earned stimulated another $\$ 1.64$ in business activity in calendar year 2005. The $\$ 62.9$ billion of agricultural exports in 2005 produced an additional $\$ 103.2$ billion in economic activity. Supporting activity surpassed the $\$ 100$ billion mark for the first time in 2005. Agricultural exports also generated 806,000 full-time civilian jobs, which include 455,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

Production from almost a third of U.S. cropland moved into export channels in 2005. Of raw crops, the United States exported 49 percent of food grain production, almost 20 percent of feed grains, and more than 29 percent of oilseeds. While, as a percent of production, food grain exports held steady and feed grain exports increased, oilseed exports are down over last year. Export-related employment peaked in 1981 when bulk and processed agricultural exports provided jobs for 1.2 million workers. In 2005, exports generated $\$ 166.1$ billion in business activity$\$ 62.9$ billion from exports and $\$ 103.2$ billion from supporting activities. Net agricultural exports in 2005 contributed $\$ 3.6$ billion to the overall U.S. trade balance—a decrease of $\$ 5.2$ billion from the $\$ 8.8$ billion contributed in 2004.

## Exports Generate New Business, Add Jobs

Of the $\$ 62.9$ billion in U.S. agricultural exports in 2005, the value of exported raw products was $\$ 22.8$ billion, $\$ 27.2$ billion of processed commodities, and $\$ 13$ billion for transport and trade services. The $\$ 103.2$ billion in 2005 supporting activity included $\$ 16.8$ billion from the farm sector, $\$ 6$ billion from the food processing sector, $\$ 24.2$ billion from other manufacturing sectors, $\$ 14.3$ billion from trade and transportation, and $\$ 41.7$ billion from other services. Nonfarm sectors of the economy received about 84 percent of the additional economic activity.

Less employment was required to produce, transport, and service 2005's agricultural exports than in 2004. Factors such as export commodity mix, price changes, and the volume of goods exported contributed to the decline. Of the 806,000 full-time civilian jobs related to agricultural exports in 2005, more than 351,000 were U.S. farmworkers, a decrease of 37,000 jobs from 2004-05 ${ }^{2}$. Almost 455,000 jobs in the nonfarm sector were involved in assembling, processing, distributing, and servicing agricultural products for export. About 62,000 of those were in food processing, 130,000 in trade and transportation, 54,000 in other manufacturing sectors, and 209,000 in other services.

In a reversal of the usual relationship, bulk exports had a larger proportional effect on the nonfarm economy than processed, or high-value, exports in 2005. Because farm prices were low in 2005, the volume of $\$ 1$ billion dollars of bulk exports was much higher than in 2004. Therefore, both the amount of labor required to handle this volume and the required associated services rose, leading to higher proportional effects or multipliers.
${ }^{1}$ The Economic Research Service uses agricultural trade multipliers to provide estimates of employment and output, and to reflect the amount of economic activity generated by agricultural exports. Additional detail is available at: http://www.ers.usda.gov/ data/trademultiplier.
${ }^{2}$ The drop in farm employment estimates for 2005 has more to do with the farm productivity series used to calculate the estimates than an actual drop in farm employment. For more information on the methods and data used to calculate farm employment due to agricultural exports see: http://www.ers.usda.gov/ Data/TradeMultiplier/ assumptions.aspx\#labor

Bulk exports generated an additional $\$ 35.6$ billion of business activity while nonbulk exports generated $\$ 67.6$ billion-i.e., \$1.70 additional output per dollar of bulk exports, $\$ 1.61$ for nonbulk exports, and $\$ 1.64$ for all agricultural exports. The additional business activity attributed to bulk exports was distributed across economic sectors as follows: 6 percent in farming, 30 percent in manufacturing, 52 percent in other services, and 12 percent in wholesale and retail trade and transportation. In contrast, of the additional business activity for nonbulk exports, 22 percent was in farming, 29 percent in manufacturing, 34 percent in other services, and 15 percent in wholesale and retail trade and transportation. Of the 806,000 jobs related to U.S. agricultural exports, 458,000 (57 percent) supported nonbulk exports.

## Impacts of Agricultural Imports on U.S. Output

The domestic output effect of the $\$ 59.3$ billion of imports that compete with U.S. products was $\$ 145.3$ billion in 2005. Each dollar spent on competitive imports would have required another $\$ 1.45$ in supporting goods and services if those imported items had been produced domestically, indicating an output multiplier of 2.45.
U.S. agricultural trade positively affects most sectors of the economy. The farm sector's $\$ 39.6$ billion of output associated with agricultural exports more than offset the $\$ 27.4$ billion of farm output implicitly lost because of competitive agricultural imports. The nonfarm sectors, including food processing, gained $\$ 8.5$ billion in total output, about 46,500 jobs and $\$ 4$ billion in income. The U.S. economy gained a net $\$ 20.8$ billion in output after considering the theoretical loss to agricultural imports. Outside of farming and food processing, the United States theoretically lost a net $\$ 2.6$ billion from direct agricultural trade but gained $\$ 12.7$ billion in total output.

## Farm Share of Income Generated by Exports

The share of total income generated by exports that accrues back to the farm sector was 23 percent in 2005. This level of income fluctuates with the type of agricultural commodities exported. Notice that the share of income that remains in the farm sector is much larger when exporting bulk products than high-value products. The transportation industry accrues almost as much income from agricultural exports as the farm sector. This farm share of total income from exports does not represent the export share of total farm income because the denominator is the income generated by exports, not all farm income.

na = not available. 1/ For commodities in these groups, see the list of ERS predefined groups in the Agricultural Trade Multipliers (ATM) data product, http://www.ers.usda.gov/data/ATM/frmERXpredefinedgroups.aspx. 2/ Open model, port-value multipliers. Data are available in the ATM calculator by selecting all agricultural exports, and bulk and high-value commodities. 3/ 2003 values are for competitive imports only; 2004 and 2005 are for all imports.

# USDA's CAgricultural Outlook Forum 2007 

Forecasts • Trends • Policies

## Agriculture at the Crossroads <br> Energy, Farm \& Rural Policy

## March 1-2, 2007

Crystal Gateway Marriott Hotel Arlington, Virginia

Topics will include:

- Energy
- Rural Development
- Policy \& Trade
- Science \& Technology
- Food Trends
- Commodities

For registration and other details: www.usda.gov/oce/forum/index.htm

## Contact Information

Nora Brooks 202-694-5211 nbrooks@ers.usda.gov
This report will become a data product in March 2007. The tables currently in the report will continue to be updated monthly and will be posted on the FATUS data page at http://www.ers.usda.gov/data/fatus. Scheduled release dates are published at http://www.ers.usda.gov/Publications/Outlook/.

## Data

Monthly and year-to-date U.S. agricultural trade (FATUS and HTS) data are on USDA’s Foreign Agricultural Service website http://www.fas.usda.gov/ustrade/. Click on FATUS imports or FATUS exports.

Fiscal and calendar year FATUS data tables and frequently asked questions and answers are at http://www.ers.usda.gov/data/fatus.

## Related Websites

Articles and general information about U.S. agricultural trade are at http://www.ers.usda.gov/briefing/agtrade.

The Foreign Agriculture Service of USDA provides additional information on U.S. agricultural trade policy (http://www.fas.usda.gov/ustrade.asp), import programs (http://www.fas.usda.gov/importprograms.asp), and exporter services (http://www.fas.usda.gov/agx/exporter_assistance.asp).

Census Bureau, U.S. Department of Commerce, http://www.census.gov/ftp/pub/foreign-trade/www/, provides a description of and guide to total U.S. trade, as well as the U.S. HTS export classifications (Schedule B), and much other information about U.S. trade data.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and, where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

E-mail Notification
Readers of ERS outlook reports have two ways they can receive an e-mail notice about release of reports and associated data.

- Receive timely notification (soon after the report is posted on the web) via USDA's Economics, Statistics and Market Information System (which is housed at Cornell University’s Mann Library). Go to http://usda.mannlib.cornell.edu/M annUsda/aboutEmailService.do and follow the instructions to receive e-mail notices about ERS, Agricultural Marketing Service, National Agricultural Statistics Service, and World Agricultural Outlook Board products.
- Receive weekly notification (on Friday afternoon) via the ERS website. Go to http://www.ers.usda.gov/Updates/ and follow the instructions to receive notices about ERS outlook reports, Amber Waves magazine, and other reports and data products on specific topics. ERS also offers RSS (really simple syndication) feeds for all ERS products. Go to http://www.ers.usda.gov/rss/ to get started.
