

Grain Crushings and Co-Products Production

ISSN: 2377-3855

Released August 1, 2017, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

Highlights

May 2017 contained 31 days.

June 2017 contained 30 days.

Total corn consumed for alcohol and other uses was 490 million bushels in June 2017. Total corn consumption was down 4 percent from May 2017 but up 2 percent from June 2016. June 2017 usage included 91.0 percent for alcohol and 9.0 percent for other purposes. Corn consumed for beverage alcohol totaled 2.77 million bushels, down 10 percent from May 2017 but up 7 percent from June 2016. Corn for fuel alcohol, at 437 million bushels, was down 3 percent from May 2017 but up 2 percent from June 2016. Corn consumed in June 2017 for dry milling fuel production and wet milling fuel production was 89.5 percent and 10.5 percent respectively.

Dry mill co-product production of distillers dried grains with solubles (DDGS) was 1.82 million tons during June 2017, down 5 percent from May 2017 and down 4 percent from June 2016. Distillers wet grains (DWG) 65 percent or more moisture was 1.25 million tons in June 2017, down 8 percent from May 2017 but up 2 percent from June 2016.

Wet mill corn gluten feed production was 341 thousand tons during June 2017 and up 3 percent from June 2016. Wet corn gluten feed 40 to 60 percent moisture was 298 thousand tons in June 2017, down 5 percent from May 2017 and down 5 percent from June 2016.

Dry and Wet Mill, Corn Consumed – United States: June 2017 with Comparisons

Statistical Methodology

Survey Procedures: *Grain Crushings and Co-Products Production* is part of the Current Agricultural Industrial Reports (CAIR) program. CAIR reports are administered under NASS's Census of Agriculture program. Response to CAIR surveys are required by law (Title 7, U.S. Code). Data are collected from all known mills that produce ethanol.

The census universe was determined during operation profile interviews which were completed for each potential facility to identify the presence of ethanol production in 2014. During the operation profile, facilities that met the survey criteria were asked for the nameplate production capacity. The operation profile also documented the manner in which the firm will report. A firm headquarters can report for all milling locations or each location can report separately.

In the Dry Mill Producers and Wet Mill Producers survey questionnaires, mills are asked for previous calendar month data on feedstocks consumed, products and co-products produced. Mills are mailed questionnaires with the options of completing the survey by mail or by Electronic Data Reporting (EDR). For surveys not received in a reasonable amount of time, telephone follow-up is conducted.

Estimating Procedures: Imputation is done for operations with non-response by using historical data and current data relationships. Data for reporting firms are added to estimates for non-reporting firms to obtain National totals.

Revision Policy: Data are revised the following month based on late reports or corrected data. Final figures are published in the annual summary of the following year.

Reliability: Approximately 130 reports are received each month which represent about 90 percent of total capacity. Monthly data can vary due to different firms reporting month to month. Survey data are also subject to non-sampling errors such as omissions and mistakes in reporting and in processing the data. While these errors cannot be measured directly, they are minimized by carefully reviewing all reported data for consistency and reasonableness.
