

Cotton System Consumption and Stocks

ISSN: 2378-2471

Released October 1, 2018, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

Highlights

July 2018 contained 31 days.

August 2018 contained 31 days.

Extra long staple cotton consumed on the cotton system was 1.01 million pounds in August 2018, down 37 percent from July 2018 and down 15 percent from August 2017. August 2018 stocks on hand on the last Saturday of the month totaled 1.95 million pounds down 29 percent from July 2018 and down 4 percent from August 2017.

Total Manmade fiber consumed on the cotton system was 36.5 million pounds during August 2018, down 8 percent from July 2018 but up 4 percent from August 2017. Of the total manmade fiber consumed, 93 percent was polyester staple.

Total number of spindles on the cotton system was 1.30 million during August 2018. Active spindles consuming 100 percent cotton was 664,000 in August 2018, down 1 percent from July 2018 and down 1 percent from August 2017.

Statistical Methodology

Survey Procedures: *Cotton System Consumption and Stocks* is part of the Current Agricultural Industrial Reports (CAIR) program. CAIR reports are administered under NASS's Census of Agriculture program. Response to CAIR surveys are required by law (Title 7, U.S. Code). Data are collected from all known mills that consume cotton.

The census universe was determined during operation profile interviews which were completed for each potential facility to identify the presence of cotton consumption and spindle activity in 2014.

In the Cotton and Manmade Fiber Staple survey questionnaires, mills are asked for previous calendar month data on cotton and manmade fiber consumed, stocks and spindle activity. Mills are mailed questionnaires with the options of completing the survey by mail or by Electronic Data Reporting (EDR). For surveys not received in a reasonable amount of time, telephone follow-up is conducted.

Estimating Procedures: Imputation is done for operations with non-response by using historical data and current data relationships. Data for reporting firms are added to estimates for non-reporting firms to obtain National totals.

Revision Policy: Data are revised the following month based on late reports or corrected data. Final figures are published in the annual summary of the following year.

Reliability: Approximately 50 reports are received each month which represent about 95 percent of total spindles. Monthly data can vary due to different firms reporting month to month. Survey data are also subject to non-sampling errors such as omissions and mistakes in reporting and in processing the data. While these errors cannot be measured directly, they are minimized by carefully reviewing all reported data for consistency and reasonableness.
