PRODUCTION EXPENDITURES

HIGHLIGHTS

Farm expenditures for 1984 totaled \$128.3 billion, down 2.3 percent from a year earlier. The average expenditure per farm was \$55,145 which is \$375 below the 1983 average. Lower prices for replacement livestock along with inventory reductions resulted in expenditures for livestock being down \$1.5 billion and feed \$1.0 billion. Other significant decreases occurred in wages & contract labor down \$0.6 billion and interest down \$0.4 billion. These four major categories accounted for 44 percent of the total expenditures for farm operations.

Partially offsetting were increased expenditures resulting from larger crop acreages. The PIK program sharply reduced harvested acreages for grains and cotton in 1983. Increases were 15 percent for seeds & plants and 5 percent for fertilizer & soil conditioners and 4 percent for farm services. These three categories accounted for 28 percent of the total expenses.

Farms that had more than \$100,000 sales from marketing of crops and livestock accounted for 52 percent of the total expenditure while farms in the \$20,000 - \$100,000 range accounted for 29 percent of the expenditures. Farms with less than \$20,000 of agricultural sales had 19 percent of the total expenditures.

THE SURVEY

The farm production expenditure information contained in this publication is the result of a sample survey of over 14,000 farms and ranches contacted in February and March of 1985. For the survey, a farm was defined as any establishment producing agricultural commodities with annual sales of \$1,000 or more. Types of establishments included in the survey are those listed in the Federal Government Standard Industrial Code (SIC) for agricultural production of crops and livestock--major group codes 01 and 02. Establishments engaged primarily in the production of field crops, vegetables, fruits, nuts and horticultural specialties are included in the crops code. Livestock includes the production of cattle, hogs, sheep, goats, horses, poultry and eggs, turkeys, milk, and honey. Also included are other animal specialties such as production of rabbits, fur-bearing animals, and fish produced in captivity.

Samples were selected from two sources. The first source was a list of operators of farms and ranches, including orchards, nurseries, greenhouses, dairies, feedlots, broiler operations, and production units which would qualify as agricultural producers. The sample from the list frame represented the larger, more specialized operations. The second source was an area frame sample where the 48 contiguous States were divided into small sampling units, each with a known probability of selection. Farm operators residing in a selected sample of these area units were surveyed. Since all of the operators on the list frame are also part of the area frame, rigorous procedures are followed to assure that an operation is included only once. The area frame represents the farms that are not included in the list frame.

Some of the measures taken to assure that data were collected uniformly and consistently across the United States were: Special training of State survey data collectors and use of screening questionnaires to determine if the sampled units qualified as farms.

FARM EXPENDITURES

The National survey results are shown in substantially the same detail as obtained from the respondents. Expenditures were recorded for goods and services that were used for the farm or ranch business. All sales and excise taxes, shipment or delivery charges, finance and carrying charges, and installation fees were included in the total cost. Only net costs were recorded when trade-in allowances or discounts were part of the transaction. For taxes, the respondents were asked to report the amount due during that survey year whether or not payment was made in that year.

It is not feasible to have a questionnaire that breaks down all of the items farm operators purchase each year. Therefore, respondents were asked to report expenditures for groups of items: i.e., seeds and plants, fertilizer, chemicals, livestock and poultry, feed, fuel, autos and trucks, farm machinery, repairs, capital improvements, farm services, and wages. The category "unallocated other expenditures," was for miscellaneous and specialized farming expenses not covered elsewhere in the questionnaire.

Expenditures applicable to both farm production and family living were allocated by the respondent reporting either on a dollar value or a percentage for the farm business share. Outlays for buying and operating motor vehicles, utility expenses, liability and building insurance were allocated by using the percentage reported as farm share. All expenses for farm real estate taxes, mortgage, interest, and legal settlement fees in connection with buying or selling farm real estate were allocated to the farm.

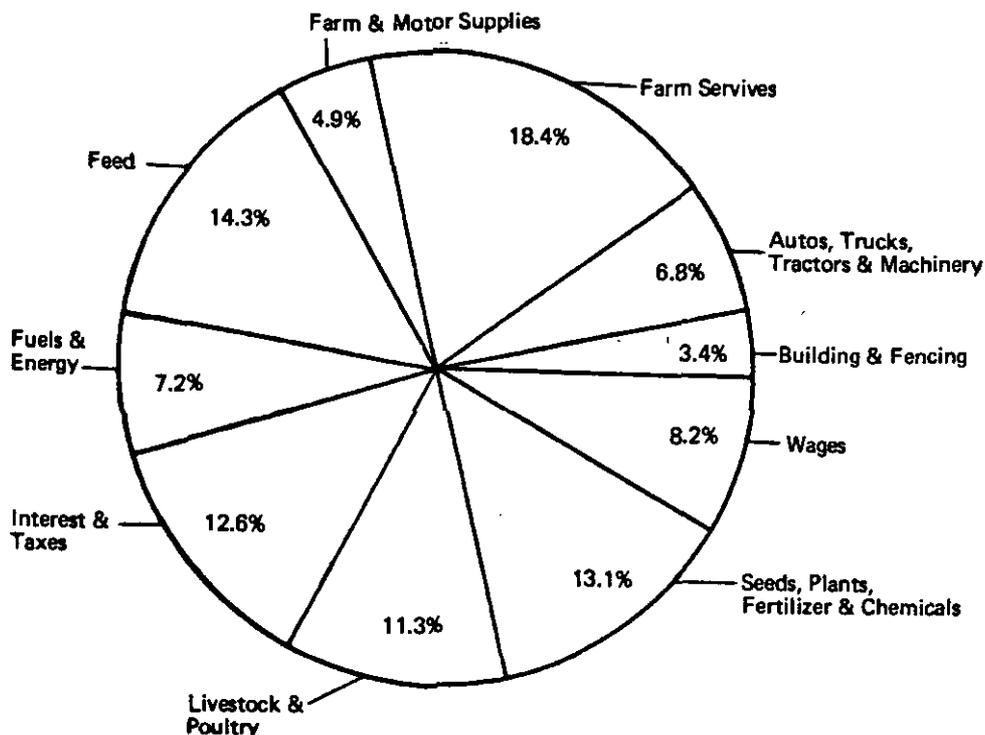

DATA RELIABILITY

Sample survey results are only indications of the total population. They may differ somewhat from the data that would be gathered in a complete census using the same questionnaires, instructions, and enumerators. A measure of this sample variability, called sampling error, is available from survey results. Sampling errors may be expressed as a percentage of the estimate. These percentages are referred to as coefficients of variation (C.V.) and are shown for selected groups of items.

Data from sample surveys are also influenced by non-sampling errors, which are not measurable or known. Non-sampling errors may be introduced by enumerators, respondents, questionnaire design, and field and office procedures. Efforts are made to minimize these errors and maintain survey accuracy by training of data collectors, detailed review and edit checking of data, and analysis of data for comparability and consistency.

NOTE: Expenditure data in this report may differ from production expenses in farm income tables published by Economic Research Service (ERS). The survey results presented in this report are used as inputs for the estimation of farm expenses. However, the farm production expenses compiled by ERS utilizes other supplemental information. In addition, several items that are common to both series have conceptual differences.

The farm income estimates published by ERS treat agriculture as one section within the United States economy. Transactions between farms generally are not measured in the income accounts since they cancel within the farm sector. For example, the production expenditures for feeder livestock in this report will exceed the estimated expenses shown in the farm income accounts since intrastate sales are included in the production expenditures but excluded from the expenses used to obtain net farm income. Rent expenditures published in this report represent gross cash and crop shares paid to all landlords; in the farm income series only the net rent paid to non-operator landlords is counted. Depreciation of capital items is estimated by ERS for computing production expenses, while this report obtains the actual capital expenses.
