MARKETING SEASONS FOR SPECIFIED CROPS

- Apples: All South Atlantic States, Kentucky, Tennessee, Indiana, Illinois, Missouri, Arkansas, New Mexico, and California, June 1 to May 31; all other States, July 1 to June 30, except Washington and Oregon where the bulk of the crop is marketed August 1 - July 31.
- Avocados: California--October 1 to September 30. Florida--July 15 to March 1.
- Cranberries: September 5 to April 1.
- Dates: August 15 to March 15.
- Olives: September 25 to March 15.

FRUITS - NONCITRUS

by States, 1971 and 1972

Production, Use and Value

Part II

This report (Part II) presents statistics on production, price, value and utilization for 5 fruits--apples, avocados, cranberries, dates, and olives, --as well as the summary tables for 16 specified noncitrus fruits. Part I, published in May 1973, contained statistics for apricots, cherries, figs, grapes, nectarines, peaches, pears, persimmons, plums, prunes, bushberries, bananas and papayas.

Production, price and value estimates for 1972 crops have been revised, where necessary, from the preliminary estimates published in the Annual Crop Summary and Crop Values reports issued in January 1973. Such revisions are based upon more complete data available at the end of the marketing season from marketing agreement records, recorded rail and truck movement, inspection records, quantities used by commercial processors, and quantities held in cold and controlled atmosphere storage. Home use quantities are included with fresh utilization.

Apple variety estimates are based on total production, which includes quantities that were abandoned because of economic conditions. All apple estimates are for the commercial crop, which is the production from orchards of 100 or more bearing-age trees.

Statistics on utilization by commercial processors refer to first, but not necessarily final, utilization. For example, frozen fruit which may later be used for jellies, sauces, etc., is included as frozen fruit. Prices used for computing value of fruit processed are the equivalent returns for fruit delivered to the processing plant door.

Season average prices for fruit for fresh use are usually the average returns at the point of first sale. Exceptions as shown in footnotes to the table are: In Washington and Oregon, fresh fruit prices for certain crops are the equivalent returns at the packinghouse door and in California, the price of fruit for fresh use is based on the first delivery point.

The season average price is applied to production to compute value of production. The average price shown for the United States is obtained by dividing the national value of production by the national quantity produced.

The value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts from these crops for a calendar year.

Production use and value of TREE NUTS, will be issued on August 1, 1973 and a similar report on CITRUS FRUITS will be published October 1, 1973.

Utilized production of noncitrus fruits, by kinds, United States, 1971 and 1972

Season	Apples (commerical crop)	Apricots	Avocados	Cherries	Cranberries	Dates	Figs
	1,000 tons-fresh equivalent						
1971	3,040	150	45	279	82	19	45
1972	2,905	127	86	230	99	16	36

Season	Grapes	Nectarines	Olives	Peaches	Pears	Persimmons and pomegranates	Plums and prunes	Total 16 fruits
	1,000 tons- fresh equivalent							
1971	3,997	69	55	1,431	707	4	559	10,482
1972	2,570	86	24	1,207	608	6	353	8,353

Season	Utilized production	Fresh	Utilization of Production 1/					Value of uti- lized production
			Total	Canned	Dried	Frozen	Other 3/	
			1,000 tons					1,000 dollars
1971	2/10,482	3,431	6,990	1,990	1,415	234	3,351	4/1,143,632
1972	2/8,353	3,102	5,191	1,773	792	240	2,386	4/1,241,190

1/ Apples, apricots, avocados, cherries, cranberries, dates, figs, grapes, nectarines, olives, peaches, pears, persimmons, plums, pomegranates, and prunes.

2/ Includes culls and cannery diversions for California Clingstone peaches (tons): 1971-61,000; 1972-60,000.

3/ Used for jellies, juices, wines, etc.

4/ Excludes culls and cannery diversions for California Clingstone peaches, and set aside in the Reserve Pool for tart cherries in the 5 Great Lakes States for 1972

- 1/ Differences between total production and production utilized are cranberries that were put in set aside under the Cranberry Marketing Order in 1971, and other quantities not utilized. Cranberries put in set aside, but sold for export are included in production utilized.
- 2/ Cranberries paid for by processors and lost because of dehydration and berry breakdown after delivery.
- 3/ Equivalent returns at first delivery point, screened basis of utilized production.
