## **Introduction**

State-level usual planting and harvesting dates for major field crops appear in this report. In addition, dot maps show major areas of production based on 2007 Census of Agriculture data. The information was assembled by the National Agricultural Statistics Service, based on the best and latest information available. The same data for vegetables may be found in *Usual Planting and Harvesting Dates for Fresh Market and Processing Vegetables* Agriculture Handbook Number 507, issued May 2007.

The dates shown indicate the periods in which the crops are planted and harvested in most years based on 20 years of historical crop progress estimates, as well as the knowledge of industry specialists. Beginning dates indicate when planting or harvesting is about 5 percent complete and ending dates when operations are about 95 percent complete. The “most active” range indicates when between 15 and 85 percent of the crop is planted or harvested.

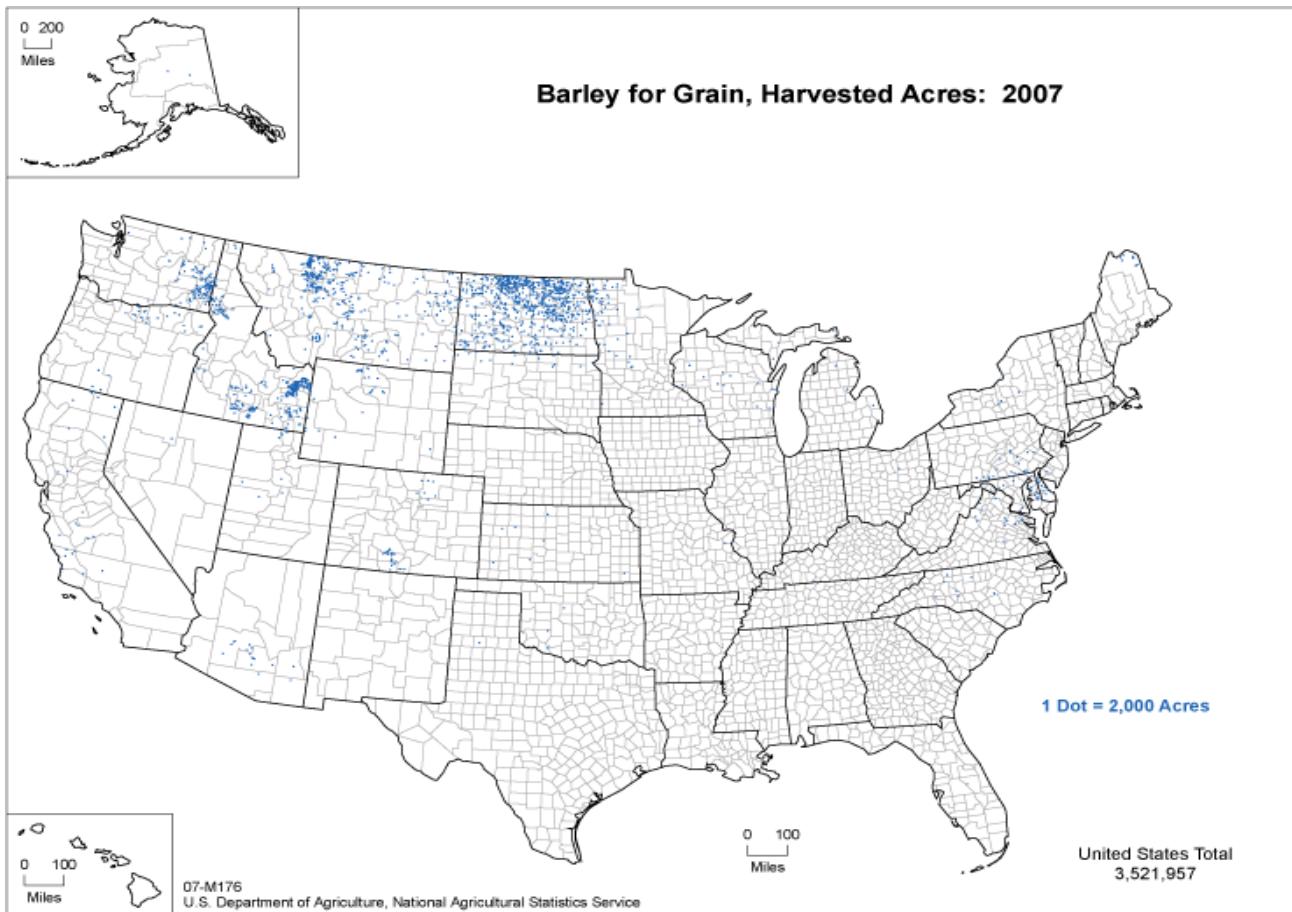

The “usual planting dates” are the times when crops are usually planted in the fields. For transplanted crops, such as tobacco, the planting period refers to the time of setting plants in the field.

The “harvest dates” refer to the periods during which harvest of the crop actually occurs. Dates do not extend through the subsequent period in which some commodities are stored in the field after harvest.

## Barley

Producers harvested 3.11 million acres of barley in the United States during 2009. After reaching a peak of nearly 17 million acres in 1942, harvested acreage has declined in recent years to levels reminiscent of the early 1880s. Yields, however, have been steadily increasing, with a record high average yield of 73.0 bushels per acre recorded in 2009.

North Dakota continues to be the largest barley-producing State, harvesting 35 percent of the total United States production in 2009. North Dakota, along with Idaho and Montana, the second and third ranking States, accounted for nearly three-quarters of the 2009 barley production. Only minor acreages are grown in the eastern and southern States. Most barley is fed to livestock, with the remainder of the crop used for malting purposes.

<sup>1</sup> Harvested acreage not published by planting season. An "All Barley" harvested acreage estimate is published in the Fall Barley table.

## Corn

Corn was the leading United States crop in 2009, both in terms of value of production and acreage grown. Nearly 79.6 million acres of corn were harvested for grain in 2009 with acreage for grain comprising 92 percent of all corn planted. More than 80 percent of the corn for grain acreage lies in the Corn Belt, with Iowa leading all States and Illinois ranking second. The largest acreage of record, 111 million acres was harvested in 1917. From 1950 to 2006, harvested acreage levels generally ranged between 60 and 75 million acres. Beginning in 2007, favorable prices, driven by growing demand from ethanol producers and strong export sales, encouraged farmers to plant more acres to corn.

Yields have generally increased since the turn of the twentieth century, with more rapid increases occurring in more recent years. The 2009 National grain yield was a record high 164.7 bushels per acre. The previous record corn yield of 160.3 bushels per acre occurred in 2004. The rise in yield has led to a steady increase in corn production beginning in the late 1980s. A record production of 13.1 billion bushels was recorded in 2009, with the second highest production of 13.0 billion bushels recorded just two years earlier in 2007.

## All Cotton

Cotton is grown in the southern United States, mostly south of the 36th parallel, with concentrations in the Texas High Plains, the Delta region, and Georgia. Unlike in the tropics where cotton is grown as a perennial, United States cotton is grown as an annual from seed planted each year. Most United States cotton is Upland cotton, which usually has a staple length of 1 to 1¼ inches. Extra-long staple American Pima cotton, which has a staple length of 1¼ inches or longer, is grown in California, Arizona, New Mexico, and Texas.

Cotton acreage increased until 1925, when nearly 46 million acres were planted, then generally declined until the 1960s. Since then, acreage has ranged between 9 and 15 million acres. Producers planted just over 9 million acres in 2009, the lowest area since 1983. Cotton yields have trended upward since the mid 1960s, with a record high yield of 879 pounds per acre of cotton harvested in 2007. With the increases in yield, cotton production in recent years has reached the same levels that were produced in the 1920s and 1930s when acreage was at its peak. In 2009, producers harvested nearly 8 million acres of cotton, accounting for just over 12 million bales.

## Alfalfa Hay

Alfalfa hay, which includes alfalfa and alfalfa mixtures, comprised 36 percent of the total acreage harvested for hay in 2009. Alfalfa is common in all regions except the Southeast, where the humid climate and sandy soils do not favor production. In most areas, the crop is harvested at least two or three times a year.

There were over 21 million acres of alfalfa hay harvested in the United States during 2009. California was the leading alfalfa hay-producing State, harvesting 7.0 million tons from nearly one million acres in 2009. Alfalfa hay production increased steadily until the mid 1980s, when a record production of 92 million tons was harvested in 1986. Production has since gradually declined. Growers harvested 71 million tons in 2009 with a yield of 3.35 tons per acre.

## Other Hay

In those States which estimate alfalfa hay, other hay includes all crops harvested for hay except alfalfa and alfalfa mixtures. Other hay includes alfalfa in Alabama, Florida, Georgia, Louisiana, Mississippi, and South Carolina. Crops grown for hay include clover-timothy mixtures, Bermuda grass, wild grasses (prairie hay), and small grains among others.

There were nearly 39 million acres of other hay harvested in the United States in 2009 with a yield of 1.98 tons per acre. Other hay production for 2009 was 76 million tons, the fifth highest total on record. Kentucky, Missouri, Oklahoma, Tennessee, and Texas led the Nation in other hay production in 2009. Nationally, yield has followed a gradual increasing trend since records began in 1934.

## Oats

Production and acreage of oats have declined steadily since 1945 when a record 1.52 billion bushels were produced on 42 million acres. In 2009, only 93 million bushels were harvested from 1.4 million acres. This was the third lowest production and lowest harvested acreage since records were first kept in 1866.

Over half of the grain crop is grown in Iowa, Minnesota, North Dakota, South Dakota, and Wisconsin. The grain crop is produced most extensively throughout the Corn Belt, Great Lakes States, and Northern Plains. Relatively few oats are grown in the Southern and Western States, with the exception of California and Texas, who cut most of their acres for hay. Nationally, about 40 percent of the planted acreage is harvested for grain with the majority of the remaining acres cut for hay.

<sup>1</sup> Harvested acreage not published by planting season. An "All Oat" harvested acreage estimate is published in the Fall Oat table.

## Peanuts

Peanut production is confined mostly to the South. There are three main producing areas: the Virginia-Carolina area, where Virginia type peanuts dominate; the Southeast, where the crop is mainly Runners and Virginia types; and the Southwest, where the acreage is planted to Runner and Spanish types of peanuts. Valencias, a roasting type peanut, account for less than 1 percent of United States production and are grown mainly in New Mexico.

Georgia continues to be the leading peanut-producing State, accounting for 49 percent of the total United States production in 2009. Texas and Alabama rank second and third in peanut production, representing 14 and 13 percent, respectively, in 2009. A total of 1.12 million acres of peanuts were planted in 2009. Planted acreage peaked at over 5 million acres during World War II, but then fell below 2 million acres in 1952. Farmers have planted between 1.5 and 2 million acres per year since the early 1950s. Yields and production improved steadily from the 1950s until 1980, but have leveled off since.

## All Rice

United States rice production is mainly confined to three areas: the coastal prairie region of southwestern Louisiana and southeastern Texas; eastern Arkansas, southeastern Missouri, and northwestern Mississippi; and the Sacramento and northern San Joaquin Valleys of California. Area planted to rice in 2009 totaled 3.14 million acres. Rice plantings have steadily increased since the late 1800s. The peak planting year came in 1981, when over 3.8 million acres were planted.

Yield has also steadily increased over the years. Yield per acre in 2009 averaged 7,085 pounds for a total production of 220 million cwt. The record high yield of 7,219 pounds per acre was attained in 2007. Arkansas was the leading rice-producing State in 2009, accounting for 45 percent of total United States production, followed by California and Louisiana, at 22 and 13 percent, respectively.

## Sorghum

Most sorghum is grown in the central and southern Plains States, where it is well adapted to heat and tolerant of limited moisture conditions. Sorghum is used primarily as a livestock feed, with the majority of the acreage not harvested for grain harvested as silage. Of the 5.52 million acres of sorghum harvested for grain in 2009, eighty-three percent was grown in Kansas and Texas. After reaching a peak of 19.7 million acres in 1957, harvested area held fairly steady from the late 1950s through the mid 1980s when area began a rapid decline. Sorghum grain yields have for the most part increased steadily from the late 1950s, with a record high average yield of 73.2 bushels per acre produced in 2007.

## Soybeans

Soybeans are grown primarily for beans which are processed into oil and meal. The main soybean producing area is in the Corn Belt and the lower Mississippi Valley. The three top producing States in 2009 - Illinois, Iowa, and Minnesota - accounted for 36 percent of the total United States production.

There were 77.5 million acres of soybeans planted in 2009, the highest on record. Planted area increased rapidly during the 1960s and 1970s until 1979, when 71.4 million acres were planted which was a record at that time. Acreage declined during the 1980s, but rebounded in the 1990s. In 2007, planted area dropped by over 10 million acres from the previous year, but rebounded in 2008 and 2009 to record levels. The 2009 yield, of 44.0 bushels per acre, was the highest yield since records were first kept in 1924. Production topped 3.35 billion bushels in 2009, more than 5 percent above the previous record high set in 2006.

## Sugarbeets

Almost all United States sugarbeets are grown under irrigation in the western half of the country and in the more humid areas of the north-central States. Sugarbeets require plentiful, well-distributed moisture and moderately cool temperatures during the growing season. Most beets are planted from March to May and harvested from September to December, with peak harvest in October. However, in California, some beets are over-wintered and harvested the following spring.

In 2009, growers harvested 1.15 million acres of sugarbeets, down from recent years and a level comparable to what was last seen during the 1980s. During the past few growing seasons, average yields have been exceptional. In fact, growers produced a record high 26.8 tons per acre in 2008. Minnesota continues to be the largest sugarbeet-producing State, harvesting 36 percent of the total United States production in 2009. Minnesota, along with Idaho and North Dakota, the second and third ranking States, accounted for 71 percent of the 2009 sugarbeet production.

## All Sunflowers

Sunflowers are primarily used by crushers, exporters, and confectioners. Crushers process sunflower seed into sunflower oil and meal. The meal is primarily used for feed, while the oil has many uses including cooking oil, salad oil, shortening, margarine, and confectionary coatings. Sunflowers are primarily grown in the Great Plains States, California, and Minnesota. Estimates of sunflowers began in 1975 and the largest area planted on record occurred in 1979 at over 5.5 million acres. Acreage levels have declined since that time, and planted area in 2009 only encompassed 2.1 million acres. The top two producing States in 2009 – North Dakota and South Dakota – accounted for 76 percent of the total United States production. Of the total production in 2009, oil type varieties of sunflower accounted for 2.6 billion pounds and non-oil varieties accounted for 452 million pounds. The average yield in the United States for all sunflowers harvested during 2009 was a record high 1,554 pounds per acre, 15 pounds per acre better than the previous record high set in 2005.

## Tobacco

United States tobacco production is generally confined to areas east of the Mississippi River, with the principal exception being the western area of Missouri. Six major classes are grown: Flue-cured, fire-cured, air-cured (light and dark), cigar filler, cigar binder, and cigar wrapper. Although grown at various latitudes, the crop has little tolerance to frost and freezing temperatures. Tobacco seeds are usually sown during the late winter and early spring in protected beds from which seedlings are pulled and transplanted in the spring. Harvest dates are governed largely by latitude, elevation, seasonal conditions, and the nature of the particular tobacco type. The flue-cured and cigar wrapper types are harvested by priming (picking the leaves as they ripen) while other types are usually stalk cut.

In 2009, North Carolina and Kentucky accounted for 77 percent of the total United States production. Harvested area increased from 1866, when records were first kept, until 1930 when the peak level of over 2 million acres was harvested. Acreage leveled off until the 1950s, but has decreased steadily from that period, reaching a record low acreage of 297,080 in 2005. Tobacco growers harvested 823 million pounds of tobacco from 354,240 acres in 2009, reaching the second highest yield on record, at 2,322 pounds per acre.

<sup>1</sup> New England includes Connecticut and Massachusetts only.

## **Durum Wheat**

The 2009 Durum wheat harvest accounted for 5 percent of all wheat produced in the United States. Durum wheat is predominately grown in the northern Great Plains, Arizona, and California. Durum wheat in the northern Great Plains is planted in the late spring and harvested late in the summer. Durum wheat grown in Arizona and California, commonly called “Desert Durum,” is planted from December through February and harvested during the early summer. Nationwide, 109 million bushels of Durum wheat were grown in 2009, with production in North Dakota accounting for 56 percent, or over 61 million bushels of the total.

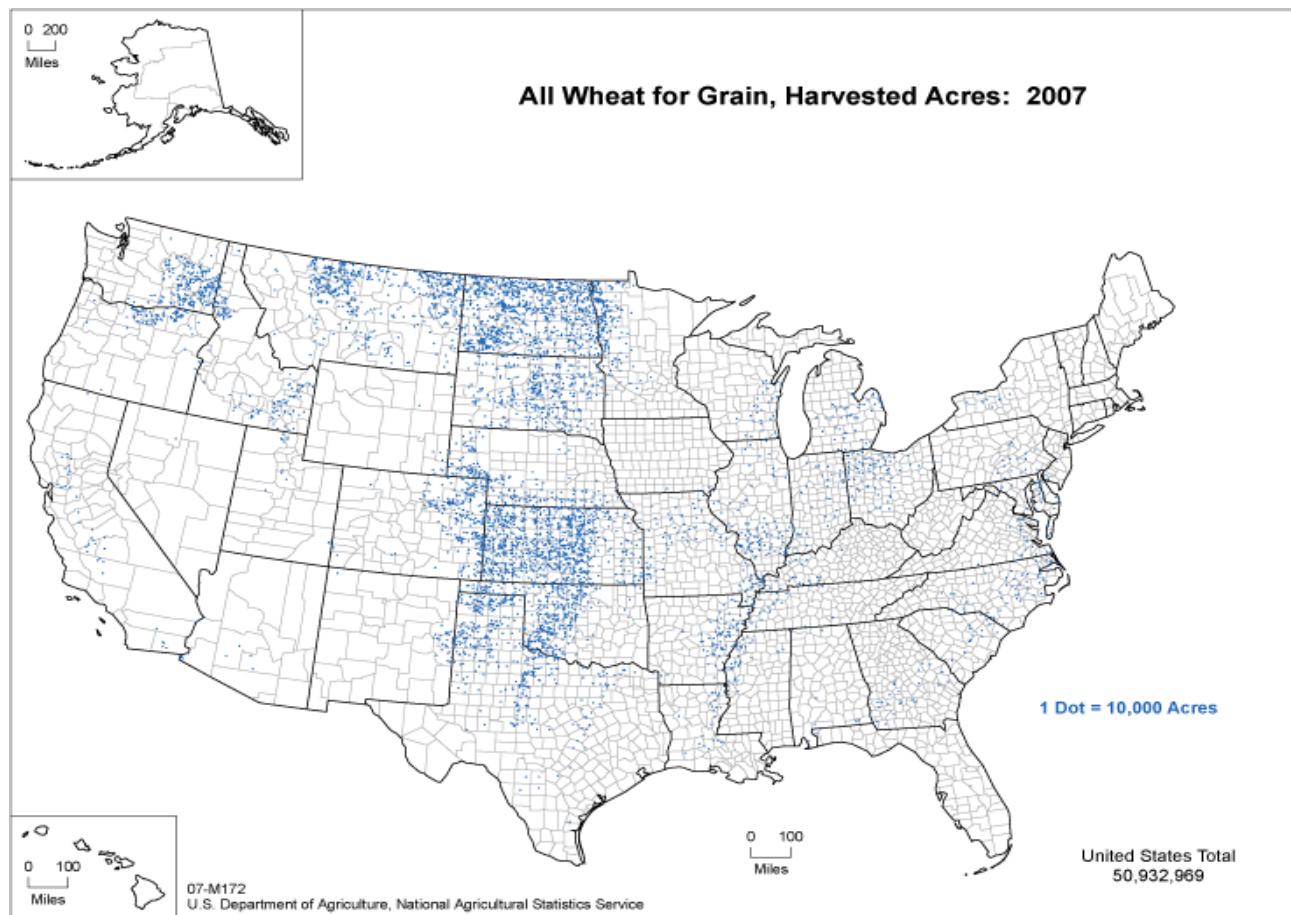

## **Spring Wheat**

The 2009 other spring wheat harvest accounted for 26 percent of all wheat produced in the United States. Spring wheat is planted in the late spring and harvested late in the summer. Annual rainfall in the northern Great Plains and northwestern States is relatively limited but well distributed during the summer, thus favoring spring wheat production. Nationwide, 584 million bushels of other spring wheat were grown in 2009. North Dakota growers produced nearly 290 million bushels of other spring wheat in 2009, making it the top producing State for all classes of wheat. North Dakota alone accounted for nearly 50 percent of other spring wheat production.

## **Winter Wheat**

Winter wheat, widely grown throughout the United States, is heavily concentrated in the central and southern Great Plains and the Pacific Northwest. Winter wheat is planted in the fall, goes into dormancy during the winter, and is harvested for grain the following spring. When weather conditions are favorable for early fall growth, much of the winter wheat in the southern Great Plains is grazed in the fall prior to going into dormancy and again in the late winter and early spring when new growth starts.

Over 43 million acres of winter wheat were planted in 2009. With the exception of peak acreages during World War II and the early 1980s, planted area has generally ranged between 40 and 50 million acres. Over 1.5 billion bushels of winter wheat were produced in 2009, comprising 69 percent of all wheat produced. Kansas, Colorado, and Washington were the three top producing winter wheat States and accounted for 37 percent of the total winter wheat production. Kansas ranked second, behind only North Dakota, in all wheat production.

## Information Contacts

Listed below are the commodity statisticians in the Crops Branch of the National Agricultural Statistics Service to contact for additional information. E-mail inquiries may be sent to nass@nass.usda.gov

Lance Honig, Chief, Crops Branch ..... (202) 720-2127

Jacqueline Moore, Head, Field Crops Section ..... (202) 720-2127

Suzanne Avilla – Peanuts, Rice ..... (202) 720-7688

Bryan Durham – Hay, Oats ..... (202) 690-3234

Steve Maliszewski – Cotton, Cotton Ginnings, Sorghum ..... (202) 720-5944

Anthony Prillaman – Corn, Proso Millet, Flaxseed ..... (202) 720-9526

Nick Schauer – Wheat, Rye ..... (202) 720-8068

Julie Schmidt – Crop Weather, Barley, Sugar Crops ..... (202) 720-7621

Travis Thorson – Soybeans, Sunflower, Other Oilseeds ..... (202) 720-7369

Jorge Garcia-Pratts, Head, Fruits, Vegetables and Special Crops Section ..... (202) 720-2127

Debbie Flippin – Fresh and Processing Vegetables, Onions, Strawberries ..... (202) 720-2157

Fred Granja – Apples, Apricots, Cherries, Plums, Prunes, Tobacco ..... (202) 720-4288

Dawn Keen – Floriculture, Maple Syrup, Nursery, Tree Nuts ..... (202) 720-4215

Steve Maliszewski – Citrus, Coffee, Grapes, Tropical Fruits ..... (202) 720-5412

Tierra Mobley – Berries, Cranberries, Potatoes, Sweet Potatoes ..... (202) 720-4285

Dan Norris – Austrian Winter Peas, Dry Edible Peas, Lentils, Mints,

Mushrooms, Peaches, Pears, Wrinkled Seed Peas, Dry Beans ..... (202) 720-3250

Kim Ritchie – Hops ..... (360) 709-2400

## **Access to NASS Reports**

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov> and in the “Receive NASS Updates” box under “Receive reports by Email,” click on “National” or “State” to select the reports you would like to receive.
- Printed reports may be purchased from the National Technical Information Service (NTIS) by calling toll-free (800) 999-6779, or (703) 605-6220 if calling from outside the United States or Canada. Accepted methods of payment are Visa, MasterCard, check, or money order.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: [nass@nass.usda.gov](mailto:nass@nass.usda.gov).

The United States Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, S.W., Stop 9410, Washington, DC 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (866) 377-8642 (English Federal-relay) or (800) 845-6136 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
