## Oranges

Global orange production for 2018/19 is forecast to surge 6.3 million metric tons (tons) to 54.3 million, the highest level in 8 years, as favorable weather leads to larger crops in the United States and Brazil. Similarly, fruit for processing is expected to expand on higher production in the United States and Brazil. Consumption is projected higher while fresh exports are down slightly as the gain in production primarily favors processing oranges. Much of the gain in the United States was in Florida where about 95 percent of the oranges go for processing and Brazil where around 70 percent of the oranges go for processing.
U.S. production is estimated to rebound 36 percent to 4.8 million tons due to a return to more normal weather in Florida where production was recovering from 2017/18 crop losses caused by Hurricane Irma. Consumption and fruit for processing are both higher with the larger crop.
Exports are lower with most of the rebound in production going to fruit for processing.

Brazil's production is
forecast up 26 percent to 20.2 million tons as favorable weather has resulted in an excellent bloom and fruit set. Fresh orange consumption and oranges for processing are both up with the jump in available fruit. With the rise in oranges for processing, orange juice production is forecast to jump to 1.4 million tons ( 65 degrees brix).

China's production is projected down slightly to 7.2 million tons due to unfavorable weather. Consumption is down on lower domestic supplies and imports. South Africa and Egypt are the top two suppliers, accounting for 60 percent of imports.

Egypt's production is estimated at a record 3.4 million tons, up 10 percent from last year on expanded area. Exports are up 4 percent to a record 1.6 million tons on greater exportable supplies. Egypt is the world's top exporter.

Production in the European Union is estimated up 4 percent to 6.5 million tons on favorable weather. Oranges for fresh consumption and processing are both higher with the increase in available supplies while imports are down 3 percent.

Mexico's production and fruit for processing are both projected to match the 2016/17 record of 4.6 and 2.1 million tons, respectively.

Morocco's production is forecast at a record 1.2 million tons on favorable weather.
Consumption is estimated at a record on greater supplies while exports are lower. The increase in production brought marketing challenges. Due to a lack of sufficient and modern packinghouses and cold-storage facilities, many farmers had to dump their product onto the market.

South Africa's production is expected to rise 3 percent to 1.6 million tons. Consumption is flat while fruit for processing is expected to expand. Exports are forecast at 1.2 million tons and are expected to account for over 25 percent of global trade. The European Union, China, and Russia are the country's top export markets.

Production in Turkey is estimated flat at 1.9 million tons. Consumption is expected to be a record high as exports are down due to Russia's rejecting many Turkish shipments in late 2018 and at the beginning of 2019 due to Mediterranean fruit fly and black fir sawyer beetle (Monochamus urussovi fisch).

## Orange Juice

Global orange juice production for 2018/19 is forecast to jump 36 percent to 2.2 million tons ( 65 degrees brix) as Brazil and U.S. production increases on a sharp expansion of oranges for processing. Consumption, exports, and stocks are expected to be higher as Brazilian and U.S. supplies rebound.

U.S. production is estimated up 75 percent to 327,000 tons as a result of a rebound in oranges for processing due to recovery from damages caused by Hurricane Irma in 2017/18. Imports are forecast down 16 percent to 345,000 tons with Brazil and Mexico the top suppliers. Greater supply availability support higher consumption and stock building.

Brazil's production is forecast to climb 39 percent to 1.4 million tons on more oranges for processing as around 70 percent of oranges produced in Brazil are used for processing. With the jump in production, both exports and stocks are forecast higher. As the largest producer, Brazil accounts for over three-quarters of global orange juice exports.

Production in the European Union is projected up 9 percent to 106,000 tons on increased oranges for processing due to favorable weather (around one-fifth of oranges produced go to processing). Consumption and stocks are flat as imports (which are over 5 times exports) are down. The EU remains the top orange juice consumer.

South Africa's production is estimated to expand by over one-third to a record 57,000 tons with a sharp expansion in fruit available for processing and improvements in the efficiency of processing facilities. Record exports are all expected with the production expansion.

## Tangerines/Mandarins

Global tangerine/mandarin production for 2018/19 is forecast up 1.9 million tons to a record 32.0 million, with larger crops in China and the European Union more than offsetting a decline in Turkey. Consumption and exports are at record levels with the gain in available supply.

U.S. production is estimated to surge 10 percent to 805,000 tons due to favorable weather. Fresh consumption is flat while exports are expected to rise with production.

China's production is estimated up 4 percent to a record 22.0 million tons due to favorable weather and rapid expansion in crop area devoted to newer easy-to-peel varieties. China represents two-thirds of global production and consumption and over one-fifth of global exports.

Production in the European Union is expected to jump 17 percent to 3.4 million tons due to favorable spring and summer weather conditions in Spain and Italy. Consumption is estimated at a record with near-record imports and higher production. Exports and fruit for processing are also both expected to be higher.

Morocco's production is projected up 190,000 tons to a record 1.4 million tons due to favorable weather and increased area. Consumption and exports are both at record highs with the jump in production. Russia and the European Union are the top export markets.

Turkey's production is estimated up 6 percent to a record 1.7 million tons. Consumption is expected to expand to a new record with the increase in available supplies and reduced exports. Exports are down due to incidence of Mediterranean fruit fly in shipments to Russia. Turkey remains the top exporter with over one-fifth of global exports.

## Grapefruit

Global grapefruit production in 2018/19 is estimated to rise 3 percent to 6.9 million tons as favorable weather helped boost the crops in the United States and China. Consumption and fruit for processing are both higher in line with expanded production while exports are expected to be down slightly.

## Lemons/Limes

Global lemons/limes production in 2018/19 is estimated up slightly to a record 8.4 million tons. Higher production in the European Union and Turkey is expected to more than offset declines in Argentina. Record consumption is expected, while exports and fruit for processing are both projected flat.

Split years refer to the harvest and marketing period, which corresponds roughly to November-October in the Northern Hemisphere.

For the Southern Hemisphere, harvest occurs almost entirely during the second year shown and the harvest and marketing period begins in the second year shown:

Argentina - January through December
South Africa - February through January
Australia - April through March
Brazil - July through June.

Import and export totals may not equal due in part to different marketing years such as those listed above.
