[MSUR-0625](#)

July 24, 2025

Highlights. During June, 12.1 billion pounds of milk were received from Federally pooled producers. This volume of milk is 1.2 percent lower than the 2024 volume. Regulated handlers pooled 3.0 billion pounds of producer milk as Class I products, up 1.9 percent when compared to the previous year. The all-market average Class utilization percentages were: Class I = 25%, Class II = 17%, Class III = 34%, Class IV = 24%. The weighted average statistical uniform price was \$19.55 per cwt, 0.47 higher than last month and \$1.43 lower than last year.

Market Summary and Utilization 2025 Annual Report
Agricultural Marketing Service

July 24, 2025

Methodology: Marketing Summary and Utilization Report

Data: The monthly Marketing and Utilization Summary Report is created by aggregating monthly information on the handling of milk obtained from Federal Milk Marketing Order personnel.

Federal Milk Marketing Order Areas are defined in the Code of Federal Regulations (7 CFR Section 1XXX.2, where xxx represents the individual order number). Regulated handlers are required to submit to the Market Administrator the pounds of producer milk received in the previous month.

Definitions:

Receipts of Producer Milk is the amount of Grade A milk produced by farmers and received at pool plants by qualified handlers (7 CFR Section 1000.9). This milk is included in the market wide pool for price computation. Each order has its own criteria for producers (7 CFR Section 1XXX.12) and producer milk (7 CFR Section 1XXX.13).

Utilization of Producer Milk in Class I is the amount of producer milk pooled and disposed of as Class I fluid milk products; packaged fluid milk products in inventory at the end of the month; and Class I shrinkage.

Utilization of Producer Milk in All Classes is the percentage of the amount of producer milk pooled and disposed of in each of the four classes of milk (Class I, Class II, Class III, and Class IV). The classes of milk are defined in the Code of Federal Regulations (Section 1000.40). These percentages may not add to 100 percent due to rounding.

Uniform Price, also known as the Statistical Uniform Price or Blend Price, represents the price per hundredweight (cwt) for milk at 3.5 percent butterfat, 3.1 percent protein, and 5.9 percent other solids. In orders with component pricing, it is calculated by combining the Class III price and the producer price differential (PPD) per cwt (7 CFR Section 1XXX.61). The monthly PPD is the remaining market value of producer milk after subtracting the value of components and making adjustments for the location of the plant of first receipt and adjustments to the producer settlement fund. In orders with skim and butterfat pricing, the uniform price represents the price per cwt for milk at 3.5 percent butterfat and 96.5 percent skim after accounting for the value of milk utilized in each class of milk, adjustments for the location of the plant of first receipt, and adjustments to the producer settlement fund.
