

PROSPECTIVE PLANTINGS

Economics, Statistics, &
Cooperatives Service

U.S. Department
of Agriculture

Washington, D.C.
20250

Released: January 22, 1979
3:00 P.M. ET

HIGHLIGHTS - 34 STATES

Expected 1979 planted acreage in 34 States surveyed and change from 1978:

Corn -- 79.2 million acres (32.1 million hectares), up 1 percent.

Sorghum -- 15.2 million acres (6.17 million hectares), down 6 percent.

Oats -- 15.6 million acres (6.31 million hectares), down 4 percent.

Barley -- 8.82 million acres (3.57 million hectares), down 8 percent.

Soybeans -- 65.4 million acres (26.5 million hectares), up 4 percent.

Upland Cotton -- 13.9 million acres (5.62 million hectares), up 6 percent.

Flaxseed -- 732 thousand acres (296 thousand hectares), down 18 percent.

Durum Wheat -- 4.25 million acres (1.72 million hectares), up 3 percent.

Other Spring Wheat -- 14.5 million acres (5.85 million hectares), up 2 percent.

Sugarbeets -- 1.11 million acres (448 thousand hectares), down 11 percent.

Rice -- 2.91 million acres (1.18 million hectares), down 5 percent.

Sunflower -- 4.14 million acres (1.68 million hectares), up 48 percent.

The prospective plantings survey for January 1, 1979 was made in 34 States. The 1978 planted acreage in these 34 States accounted for all the rice, flaxseed, durum wheat and sunflower acreage; 99 percent or more of the spring wheat and oats acreage; 98 percent or more of the corn, sorghum, soybeans and Upland cotton acreage; almost 96 percent of the barley acreage; and 95 percent of the sugarbeet acreage. For all crops surveyed, the 34 States accounted for 98.5 percent of the 1978 planted acreage.

JANUARY 1979 PROSPECTIVE PLANTINGS REPORT

This report, prepared by the Crop Reporting Board, is based on the voluntary response of growers to a mail survey about January 1. Some 20,000 growers participated in the survey, reporting 1979 planting intentions. The report is intended to assist growers in making decisions they consider desirable pertaining to their acreage plans. The published acreage intentions are interpretations of current reported plans based on past relationships of grower reports to final planted acreage estimates. Acreages actually planted may vary from those indicated for such reasons as weather, economic conditions, availability of production inputs, farm programs and the effect of this report itself on growers' actions.

This January Prospective Plantings report includes data for 34 major crop producing States. It covers at least 95 percent of the normal acreage for 12 major U.S. crops including corn, sorghum, oats, barley, soybeans, Upland cotton, flaxseed, rice, durum wheat, other spring wheat, sugarbeets and sunflower. Actual seedings of winter wheat and rye were reported in "Winter Wheat and Rye Seedings", December 21, 1978.

A second Prospective Plantings report will be issued April 16 and will include the 48 contiguous States. Survey information for that report will be gathered around April 1 which will permit growers in all States to report their plans just prior to the major planting period for spring crops. In addition to the crops listed above, the April report will include white corn, American-Pima cotton, peanuts, potatoes, sweetpotatoes, dry edible beans, dry edible peas, hay and tobacco.

The CROP PRODUCTION report contains State and National estimates with related information on selected agricultural commodities. These data were prepared and adopted by the Crop Reporting Board which consists of commodity statisticians from Washington headquarters and the State Statistical Offices.

A P P R O V E D:

ACTING SECRETARY OF AGRICULTURE

CROP REPORTING BOARD:

D. E. Hamilton,	S. R. Koyle,
L. E. Snipes,	C. A. Van Lahr, Jr.

INTENDED FEED GRAIN PLANTINGS OFF 1 PERCENT

Prospective plantings of the four feed grains total 118.9 million acres (48.1 million hectares) in the 34 States surveyed, down 1 percent from the 120.2 million acres (48.7 million hectares) planted in those States in 1978. Intended plantings are up 1 percent for corn but down 8 percent for barley, down 6 percent for sorghum and down 4 percent for oats.

CORN: Growers in States surveyed intend to plant 79.2 million acres (32.1 million hectares) of corn for all purposes in 1979, 1 percent more than last year but 3 percent less than in 1977. These States accounted for 98.2 percent of the Nation's corn acreage planted in 1978.

Intended plantings in the North Central States are up 2 percent from a year earlier. All of the major Corn Belt States are showing increases with the exception of Illinois which is down 1 percent and Indiana which is unchanged from last year. Intentions in South Central States indicate 6 percent less corn acreage than last year due primarily to a 16 percent decrease in Texas.

SORGHUM: Growers in States surveyed intend to plant 15.2 million acres (6.17 million hectares) of sorghum for all purposes in 1979, down 6 percent from 1978 and 9 percent below 1977. The States surveyed accounted for 98.0 percent of the U.S. acreage in 1978. Texas, with 35 percent of the Nation's sorghum acreage, is expecting a 9 percent decline from a year ago. Kansas acreage, which accounts for 29 percent of the U.S. total, is expected to be down 4 percent from last year. Other major States expecting declines are Nebraska, down 5 percent; Oklahoma, down 14 percent; and Colorado and South Dakota, each down 4 percent. Missouri is the only major sorghum State indicating an increase in acreage. Farmers in that State intend to plant 2 percent more acreage to sorghum than a year ago.

OATS: Acreage of fall seeded oats plus intended spring plantings in the States surveyed is expected to total 15.6 million acres (6.31 million hectares) in 1979, down 4 percent from the previous year and 11 percent below 1977. The States surveyed accounted for 99.0 percent of the Nation's oat acreage in 1978. Planted acreage for 1979 is expected to be lower than last year in Minnesota, Iowa, and North Dakota but higher in South Dakota. Acreage in Texas and Wisconsin is expected to remain unchanged from a year ago.

BARLEY: Planted acreage of fall seeded barley plus intended plantings for this spring for the States surveyed totaled 8.82 million acres (3.57 million hectares). This is 8 percent below 1978 and 13 percent below 1977. The States surveyed accounted for 95.7 percent of the U.S. planted acreage in 1978.

For the six major States, North Dakota was down 16 percent, Montana down 3 percent, California unchanged, Idaho up 1 percent, Minnesota down 17 percent and South Dakota down 10 percent. These States accounted for over three-fourths of the Nation's barley planted acreage in 1978 and combined show a drop of 9 percent in intended acreage for 1979.

SPRING WHEAT: Prospective durum wheat plantings for 1979 in the six major producing States total 4.25 million acres (1.72 million hectares), 3 percent above last year's 4.11 million acre (1.66 million hectares) crop.

North Dakota farmers intend to plant 3.55 million acres of durum wheat or 8 percent more acres than in 1978. Growers in South Dakota expect to plant 210 thousand acres, 8 percent more acres than last year while Minnesota growers expect to plant 105 thousand acres, 5 percent more than in 1978. Decreased acreage expected in Montana would bring the State total to 260 thousand acres, a 13 percent decline from last year.

In the Southwest, durum planting intentions show a decline. Arizona growers expect to plant 32 percent less acres, while California growers intend to decrease acreage by 50 percent from the previous year.

Growers in the 9 major producing spring wheat States representing 99.5 percent of the U.S. total expect to plant 14.5 million acres (5.85 million hectares) of spring wheat other than durum, a 2 percent increase from 1978. North Dakota growers, representing 44 percent of the U.S. total, intend to plant 6.20 million acres, 2 percent below last year's acreage. Washington and Colorado also indicate acreage declines in prospective plantings, while the remaining States show increases or no change.

RICE: Growers indicate plans to plant 2.91 million acres (1.18 million hectares) of rice in 1979. This would be 5 percent less than last year's record high 3.08 million acres (1.25 million hectares) but 29 percent more than the 1977 planted acres. California growers intend to increase planted acres by 6 percent while Arkansas and Louisiana farmers plan to decrease plantings by 9 percent. Rice growers in Mississippi intend to reduce acreage by 5 percent and those in Texas plan a 4 percent decline.

Long grain seeded acreage is expected to be 1.93 million acres (781 thousand hectares), 4 percent less than a year ago. Arkansas, with almost half the total acreage, expects 5 percent fewer acres.

Medium grain rice acreage at 772 thousand acres (312 thousand hectares) may decline 8 percent from last year. California growers intend to increase acreage 13 percent, but Louisiana producers are reducing acreage by 16 percent.

Short grain rice growers plan to seed 210 thousand acres (85.1 thousand hectares), 10 percent less than last year. California, the leading State, plans a 5 percent reduction.

SOYBEANS: Producers in the States surveyed expect to plant a record high 65.4 million acres (26.5 million hectares) to soybeans in 1979, up 4 percent from the record high of 63.2 million acres (25.6 million hectares) set in those States last year. The soybean producing States of Delaware, Florida and New Jersey were not included in the survey.

Growers in the North Central States expect to plant 39.9 million acres, up 3 percent from 1978. Changes in these States range from a decrease of 2 percent in Kansas to an increase of 30 percent in South Dakota. Iowa acreage is expected to remain the same and Illinois is expected to increase acreage by 1 percent. Planted acreage in the South Central area is indicated at 19.5 million acres, up 4 percent from last year. Changes from 1978 range from a decrease of 1 percent in Arkansas to an increase of 18 percent in Oklahoma. Producers in the North and South Atlantic areas plan an increase of 5 percent to 6.04 million acres. Changes range from no change in New York and Virginia to a 31 percent increase in Pennsylvania.

FLAXSEED: Growers expect to plant 732 thousand acres (296 thousand hectares) of flaxseed in 1979, down 18 percent from last year. If realized, this will be the smallest flaxseed acreage since acreage estimates were started in 1889. Each of the four States in the program intend to reduce acreage from last year. Minnesota anticipates a 17 percent decline, North Dakota a 20 percent decline, South Dakota a 12 percent decline and Texas a 52 percent decline.

SUNFLOWER: Sunflower acreage to be planted for all purposes in the 4 States estimating this crop is expected to increase 48 percent to 4.14 million acres (1.68 million hectares) in 1979. North Dakota growers with 69 percent of the intended acreage expect 2.87 million acres, a 52 percent increase from last year. Minnesota acreage is expected to be up 35 percent, South Dakota expects to increase 52 percent and Texas is expected to increase 78 percent.

Intended acreage planted to oil varieties at 3.91 million acres (1.58 million hectares) is up 53 percent from 1978. Non-oil varieties are expected to decline 6 percent from last year.

UPLAND COTTON: Planted acreage of Upland cotton in 1979 in the States surveyed is expected to be 13.9 million acres (5.62 million hectares), a 6 percent increase from the 1978 acreage.

Texas growers intend to plant 7.20 million acres of Upland cotton, 4 percent above 1978. Oklahoma growers expect to plant 600 thousand acres, unchanged from 1978.

The the Delta States -- Arkansas, Louisiana, Mississippi, Missouri, and Tennessee -- growers expect to plant 3.13 million acres, 5 percent above the 1978 acreage.

In the Southeastern States -- Alabama, Georgia, North Carolina, and South Carolina -- expected plantings total 720 thousand acres, up 19 percent from the 1978 planted acres.

Growers in Arizona and California intend to plant 2.25 million acres of Upland cotton, an increase of 11 percent from last year.

SUGARBEETS: *Grower intentions for the sugarbeet producing States surveyed indicate there will be 1.11 million acres (448 thousand hectares) of sugarbeets planted in 1979. If these intentions are carried out, planted acreage will be 11 percent below 1978 and 9 percent below 1977. The States surveyed accounted for 95 percent of the Nation's sugarbeet acreage planted in 1978.*

Most States anticipate a decrease in acreage. Minnesota, the leading producer last year, expects a 4 percent decrease in acreage while North Dakota and Idaho expect decreases of 7 and 27 percent, respectively. California, second in production last year, expects to increase acreage 4 percent.

Several plants have announced that they are closing and will not receive 1979 crop beets. This is expected to cause a decline in acreage for Idaho, Oregon, and Utah. The sugarbeet acreage in Washington is currently in question since both plants in that State have indicated plans not to operate in 1979. Intentions shown in the report assume that no marketing or processing facilities will be available in Washington.
