MAR 3 1 1981

HIGHLIGHTS

CORN plantings are expected to total 84.0 million acres (34.0 million hectares) in 1981, fractionally less than last year's planted acreage of 84.1 million acres (34.0 million hectares).

SOYBEAN acreage of 69.8 million acres (28.3 million hectares) is, in prospect, down less than 1 percent from 1980.

COTTON acreage to be planted this year is forecast at 14.5 million acres (5.86 million hectares), down 1 percent from 1980.

SORGHUM acreage intentions of 15.7 million acres (6.37 million hectares) are down 1 percent from 1980.

DURUM WHEAT seeding intentions of 6.14 million acres (2.48 million hectares) are up 11 percent from 1980.

OTHER SPRING WHEAT acreage is expected to total 17.0 million acres (6.88 million hectares), down 3 percent from 1980.

PEANUT prospective acreage at 1.61 million acres (651 thousand hectares) is up 4 percent from 1980.

This report is based on the voluntary mail response of about 48,000 growers who reported planting intentions for their individual farming operations. Estimates for most crops are based on data collected as of January 1 in 12 States (Alabama, Arizona, California, Florida, Georgia, Kentucky, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee and Virginia) and as of March 1 in remaining States. For several crops, including white corn, other spring wheat, flaxseed, sunflowers, dry edible peas, tobacco, and sugarbeets, all State estimates are based on data collected as of March 1. Table for other crops have been footnoted to designate States where data relate to a January 1 survey date. Arkansas, Louisiana, Mississippi, and Texas, which were surveyed January 1, were re-surveyed on March 1 to obtain more current data on planting intentions. The published acreage intentions are interpretations of currently reported plans based on past relationships of grower intentions to final planted acreage estimates. Acreages actually planted may vary from those indicated as a result of survey timing, weather, economic conditions, availability of production inputs and the effect of this report itself on farmers' actions.

FOOD AND FEED GRAIN ACREAGE EXPECTED TO INCREASE,
OILSEED ACREAGE TO DECLINE

Food grain acreage (wheat, rice, and rye) intentions at 93.2 million acres (37.7 million hectares) are up 8 percent from last year. Feed grain acreage (corn, sorghum, oats and barley) is expected to total 122 million acres (49.5 million hectares), up 1 percent from 1980. Oilseed acreage (soybeans, cotton, sunflowers, peanuts, and flaxseed) intentions at 90.5 million acres (36.6 million hectares), are down 1 percent from a year ago.

1/ INTENDED PLANTINGS IN 1981 AS INDICATED BY REPORTS FROM FARMERS, EXCEPT FOR WINTER WHEAT SEEDINGS WHICH WERE PUBLISHED DEC. 23, 1980 IN THE SMALL GRAINS REPORT. 2/ INCLUDED IN "ALL CORN." 3/ AREA HARVESTED.

The CROP PRODUCTION report contains State and National estimates with related information on selected agricultural commodities. These data were prepared and adopted by the Crop Reporting Board which consists of commodity statisticians from the field offices and Washington headquarters.

A P P R O V E D:

ACTING SECRETARY OF AGRICULTURE

CROP REPORTING BOARD:

J. L. Olson, Chairman,
G. L. Clampet, Secretary,
D. W. Barrowman, R. L. Schulte,
K. D. Ackers, R. L. Addison,
J. S. Buche, A. R. Budge,
T. J. Byram, M. J. Helmkamp,
G. H. Howse, M. A. Hunst,
C. D. James, T. W. Jean,
S. R. Koyle, R. W. Milton,
E. Molenda, G. A. Nelson.

CORN: Producers expect to plant 84.0 million acres (34.0 million hectares) of corn for all purposes in 1981. If these intentions are realized, planted acreage will be fractionally less than last year's acreage of 84.1 million acres (34.0 million hectares).

Expected plantings in Kansas and Missouri are down considerably...off 19 and 17 percent, respectively. This area was hit hard by last year's drought and growers have, or intend to plant to other crops, especially wheat. In the Northern Corn Belt growers are showing large acreage increases. Minnesota reports a 6 percent increase, and Wisconsin and Michigan each, 2 percent. This area had a good crop last year and moisture is currently adequate. In the Central Corn Belt, Iowa shows a 1 percent increase, Ohio a 4 percent increase, Illinois is off 1 percent, and Indiana is unchanged.

Planting got underway in the lower Rio Grande Valley of Texas in late February. Planting throughout much of the remainder of the country is expected to begin early, based on current weather and soil conditions.

WHITE CORN: Producers in the 10 States surveyed intend to plant 487 thousand acres (197 thousand hectares) of white corn in 1981, a 1 percent increase from 1980. Kentucky continues to be the leading white corn State and expected planted acreage there is unchanged from a year ago. Texas and Tennessee, the next two ranking major producing States, expect acreage increases of 13 and 14 percent, respectively. These increases are partially offset by expected acreage reductions in Alabama, Georgia, Illinois, Kansas, and Missouri.

SORGHUM: Producers expect to plant 15.7 million acres (6.37 million hectares) of sorghum for all purposes in 1981. If these intentions are realized, planted acreage will decrease 1 percent from 1980 but will be 3 percent above 1979.

Texas growers expect to plant 4 percent less acreage to sorghum than last year. Texas remains the leading sorghum producing State with 4.60 million acres to be planted, 29 percent of the U.S. total acreage. Kansas producers expect to plant 4.40 million acres, a decrease of 6 percent from last year. Nebraska farmers intend to plant 2.30 million acres, a 5 percent increase from 1980 and Missouri growers indicate intentions to plant 1.15 million acres--a 15 percent increase. These four States (Texas, Kansas, Nebraska, and Missouri) account for 79 percent of the Nation's intended sorghum acreage.

OATS: Seeding of oats for the 1981 crop is expected to total 13.5 million acres (5.47 million hectares), 1 percent greater than last year but 3 percent below 1979.

Acreage increases from 1980 of 5, 10, and 8 percent, respectively, are expected in South Dakota, North Dakota, and Texas. Decreases in acreage from the previous year in other leading oat producing States are: Minnesota, 5 percent; Iowa, 8 percent; and Wisconsin, 2 percent.

BARLEY: Intentions reports indicate farm operators will plant 10 percent more barley acreage in 1981 than a year earlier. State estimates total 9.09 million acres (3.68 million hectares) for 1981, which compares with 8.28 million acres (3.35 million hectares) planted in 1980 and 8.11 million acres (3.28 million hectares) in 1979. Plantings in the major producing States are expected to be substantially higher than a year earlier. North Dakota, the leader, at 2.15 million acres is up 16 percent. Montana, at 1.35 million acres, advanced 14 percent. Washington's growers intend to increase plantings by 48 percent to 650 thousand acres. Acreage gains are also expected in Minnesota and Idaho with increases of 4 and 6 percent, respectively. Current weather and soil conditions suggest early plantings in most areas.

WHEAT: Prospective plantings of all wheat for the 1981 crop are 87.1 million acres (35.2 million hectares), 8 percent greater than last year's 80.4 million acres (32.5 million hectares) and 22 percent more than was seeded for the 1979 crop. This estimate is based on farmers' intentions to plant spring wheat plus the December 1, 1980 estimate of winter wheat planted for harvest in 1981.

DURUM WHEAT: Producers indicate plans to seed 6.14 million acres (2.48 million hectares) of durum wheat in 1981, 11 percent more than last year's 5.53 million acres (2.24 million hectares) and 52 percent greater than the acreage two years ago. All States indicate increased acreage from 1980. North Dakota -- with 78 percent of the total intended acreage -- is up 9 percent.

OTHER SPRING WHEAT: Prospective plantings for other spring wheat are indicated at 17.0 million acres (6.88 million hectares), 3 percent less than the 17.5 million acres (7.07 million hectares) seeded in 1980 but 9 percent greater than the 1979 acreage. In the four States with the largest acreage, Minnesota and Montana are unchanged from 1980, North Dakota is down 3 percent, and South Dakota is up 2 percent. Idaho, Oregon and Washington growers indicate decreased acreage from 1980 of 15, 12 and 52 percent, respectively. Washington reported very little loss of winter wheat acreage because of winterkill, reducing the seeding of spring wheat to replace winter wheat losses.

RICE: Growers report intentions to plant 3.49 million acres (1.41 million hectares) of rice in 1981, 4 percent more than last year's 3.36 million acres (1.36 million hectares). All States except Mississippi indicate increased rice acreage this year compared to last, ranging from 1 percent in California to 11 percent in Missouri. Arkansas, with the largest acreage, indicates a 4 percent increase.

Producers of long grain rice intend to plant 2.28 million acres (923 thousand hectares), 2 percent more than last year's 2.24 million acres (905 thousand hectares). In all States except Arkansas, growers plan an increase of 1 percent or more in acreage of long grain rice. Arkansas growers, with 48 percent of the long grain acreage, intend virtually the same acreage as last year. This year's medium grain acreage is expected to be 1.05 million acres (426 thousand hectares), 7 percent more than last year. California, the largest producer of medium grain rice, intends to decrease acreage 1 percent. Louisiana and Arkansas growers are increasing medium grain acreage by 6 and 24 percent, respectively. U.S. short grain acreage is expected to increase to 154 thousand acres (62.2 thousand hectares), 7 percent more than last year. California growers, with 81 percent of the acreage, plan to increase acreage by 7 percent.

SOYBEANS: Growers intend to plant 69.8 million acres (28.3 million hectares) of soybeans in 1981, down less than 1 percent from the 1980 acreage of 70.1 million acres (28.4 million hectares). Compared with 1980, 15 States expect increases, 11 States expect declines and 4 States expect acreage to remain unchanged.

Soybean acreage in the North Central States is expected to total 41.2 million acres, down 2 percent from the 42.0 million acres planted in 1980. Acreage intentions are down in Illinois, Indiana, Iowa, Minnesota, Missouri, Ohio and South Dakota. Increases are expected in Kansas, Michigan, Nebraska, North Dakota and Wisconsin.

In other regions, acreages are expected to decline from last year in Delaware, Mississippi, New Jersey and Pennsylvania. Other States are showing no change or are increasing from 1980.

FLAXSEED: Producers intend to plant a record low 666 thousand acres (270 thousand hectares) of flaxseed in 1981, down 18 percent from last year.

Prospective acreage is down from last year in all States. Minnesota is showing a 25 percent decline, North Dakota an 8 percent decline, and South Dakota a 26 percent decline.

PEANUTS: Producers intend to plant 1.61 million acres (651 thousand hectares) of peanuts in 1981, up 4 percent or 66.5 thousand acres from 1980.

Growers in the Southeastern States (Alabama, Florida, Georgia, Mississippi, South Carolina) plan to increase acreage 5 percent from the previous year to 869 thousand acres.

Virginia-North Carolina farmers intend to plant 293 thousand acres in 1981, 7 percent more than in 1980.

Southwestern peanut growers (New Mexico, Oklahoma, Texas) are expected to increase plantings to 447 thousand acres, 1 percent above last year.

SUNFLOWERS: Growers intend to plant 3.91 million acres (1.58 million hectares) of sunflowers for all purposes in 1981, down 3 percent from last year. This acreage represents planting intentions of both oil and non-oil type sunflowers for the four States in the estimating program. Acreage intentions for oil type at 3.59 million acres (1.45 million hectares) are down 3 percent from last year. Indicated non-oil type at 316 thousand acres (128 thousand hectares) is up 9 percent from last year. Oil type acreage makes up 92 percent of the total.

Oil type acreage intentions are up 6 percent from last year in North Dakota, but down 21 percent in Minnesota, 14 percent in South Dakota and 8 percent in Texas. Non-oil type intentions are up 13 percent in North Dakota, unchanged in South Dakota, but down 8 percent in Minnesota.

COTTON: Planted acreage of all cotton in 1981 is expected to total 14.5 million acres (5.86 million hectares). The prospective acreage includes 14.4 million acres (5.83 million hectares) of Upland and 68.8 thousand acres (27.8 thousand hectares) of American-Pima. If realized, this all cotton acreage will be 1 percent less than 1980 plantings.

In the Southeastern States--Alabama, Georgia, North Carolina and South Carolina--growers intend to plant 700 thousand acres of cotton, 3 percent more than last year. Recent rains have improved soil moisture levels. Seedbed preparation is on schedule and planting is expected to start about April 1.

Acreage in the Delta States--Arkansas, Louisiana, Mississippi, Missouri and Tennessee--is forecast at 3.03 million acres, 2 percent above last year. Soil moisture is adequate and the preparation of seedbeds and application of fertilizer and herbicides is making good progress.

Growers in Texas and Oklahoma intend to plant 8.43 million acres of Upland cotton in 1981, 2 percent less than the 1980 acreage. Planting is underway in the Rio Grande Valley. Land preparation is well advanced and moisture levels are adequate for planting in most northern areas of Texas.

Upland cotton acreage in Arizona, California and New Mexico is forecast at 2.25 million acres, about the same as in 1980.

HAY: Farmers intend to cut 61.1 million acres (24.7 million hectares) of hayland in 1981, a 3 percent increase from the 1980 harvested acreage. All States except Arizona, Colorado, Iowa, Ohio, Oregon, Tennessee, Washington, and Wisconsin intend to increase harvested acreage or hold it unchanged from 1980. The largest acreage increase expected is in North Dakota, up 17 percent from the previous year. Last year's drought-reduced hay production throughout the Midwest and across the South lowered stocks and a larger crop in 1981 is necessary to rebuild supplies.

DRY EDIBLE BEANS: U.S. dry bean growers expect to plant 2.01 million acres (811 thousand hectares) in 1981, a gain of 6 percent over last year and up 41 percent from 1979. Export contracts to Mexico continue to attract the attention of growers across the Nation, with all States, except California, planning to maintain or increase last year's planting level.

DRY EDIBLE PEAS: Growers in Idaho and Washington intend to plant 111 thousand acres (44.9 thousand hectares) of dry edible peas in 1981, 20 percent less than last year. Both States anticipate a 20 percent decline in acreage. Some fieldwork has been started, but most soils are too wet. Moisture conditions should be sufficient to get the 1981 crop off to a good start.

SWEETPOTATOES: Planting intentions for sweetpotatoes in the U.S. in 1981 total 111 thousand acres (45.0 thousand hectares). This is 2 percent more than the 1980 planted acreage but 6 percent less than in 1979. At 111 thousand, acreage will be the second smallest planted acreage of record.

At 39.0 thousand acres, intentions in North Carolina, the leading sweetpotato producing State, are up 3 percent from 1980. In Louisiana, the second largest producing State, intentions are 27.0 thousand acres, up 4 percent from a year earlier.

TOBACCO: Growers expect to harvest 939 thousand acres (380 thousand hectares) of all tobacco during 1981, 3 percent more than in 1980. Flue-cured acreage is expected to decline 4 percent while burley acreage will increase 16 percent.

Flue-cured acreage intentions are 531 thousand acres (215 thousand hectares), compared with 552 thousand acres (223 thousand hectares) in 1980. A 3 percent increase in type 11 acreage will not offset a reduction in acreages of types 12, 13 and 14. A 12 percent decline is expected for type 12.

Burley producers plan to harvest 321 thousand acres (130 thousand hectares), 16 percent above 1980. Kentucky and Tennessee account for most of the increase. Acreage in each of these States is up 17 percent.

Fire-cured growers' intentions are 24.0 thousand acres (9710 hectares), 3 percent greater than the previous year.

Southern Maryland tobacco growers anticipate harvesting 21.0 thousand acres (8500 hectares), the same as in 1980.

Dark air-cured growers intend to harvest 10.2 thousand acres (4120 hectares), 5 percent above last year's 9690 acres (3920 hectares).

Cigar-filler acreage is expected to total 14.5 thousand acres (5870 hectares), 1 percent above 1980.

Cigar-binder growers indicate plans for 14.8 thousand acres (5990 hectares), up 3 percent from a year earlier.

Cigar-wrapper is expected to total 2800 acres (1130 hectares), down 11 percent from 1980.

SUGARBEETS: Growers intend to plant 1.26 million acres (508 thousand hectares) of sugarbeets in 1981. If these intentions are realized, planted acreage will be 2 percent greater than the 1980 acreage and 8 percent more than the 1979 total.

Acreage increases intended by growers in 7 States are moderated by smaller acreages planned in 7 States. The greatest increase in plantings is in California, where 270 thousand acres are expected. Growers in Minnesota plan to plant 258 thousand acres, about the same as last year. The greater declines in acreage are expected in Colorado and Nebraska.

Reduced snowpack in Colorado and Montana is of some concern. Contracting is not complete in all States.
