ICE CREAM PRODUCTION

Ice cream production in the United States in November, estimated at 50,765,000 gallons, was the highest of record for the month, the Crop Reporting Board reports. Output was 4 percent more than in November 1963 and 10 percent larger than the 1958-62 average for the month. The seasonal decline from October to November was only 11 percent this year, compared with 17 percent at this time a year earlier and 14 percent on the average in the previous 5-year period. Temperatures during November averaged below normal in most of the area from the Pacific Coast eastward to the eastern sections of the Dakotas, northern Nebraska, southwestern Colorado and western New Mexico, except for a section of the middle Rocky Mountain area. They were normal or above in the remainder of the country except the eastern New England States.

Ice cream production increased from November 1963 in all regions of the country except the Mountain, where it decreased 7 percent. Increases ranged from 1 percent in the East North Central Region to 10 percent in both the West North Central and the South Central. Output increased 4 percent in the North Atlantic States. Other gains were 2 percent in the South Atlantic Region and 1 percent in the Pacific. In the three leading ice cream-producing states, production was up 7 percent in New York and 8 percent in California, but down 1 percent in Pennsylvania.

Compared with the 1958-62 average for November, production increases in all regions varied from 3 percent in both the South Atlantic and the Mountain to 14 percent in the South Central. Output was 11 percent more in both the North Atlantic Region and the West North Central. Increases in the remaining regions were 10 percent in the East North Central and 12 percent in the Pacific. Production was more in all important-producing states except Ohio, Iowa, Kansas, Maryland, Florida, Louisiana and Oregon. Output was 1 percent above average in Pennsylvania, while it was 13 percent greater in both New York and California.

1/From enumerations. 2/Includes Alaska and Hawaii.

The manufacture of ice milk in the United States was estimated at 12,415,000 gallons in November, the Crop Reporting Board announced. This was 16 percent greater than in November 1963 and was the highest November output of record. It was 57 percent above the 1958-62 average for the month. Cumulative January-November production was 5 percent more than the eleven month period of 1963 and 43 percent above the average. Output declined 21 percent from October to November compared with 32 percent at this time in 1963 and 28 percent on the average in the 1958-62 period. All regions recorded seasonal declines. Compared with November 1963, output was more in all regions except the West.

SHERBET PRODUCTION

Sherbet production in the United States of 2,450,000 gallons was the second highest November output of record. This was 10 percent more than in November 1963 and 27 percent above the 1958-62 average for the month. The seasonal decline of 11 percent between October and November this year compares with 26 percent at this time in 1963 and 23 percent on the average in the preceding 5-year period. Output declined seasonally in all regions of the country. Compared with November 1963, production increased in all regions. The sharpest gains occurred in the South Atlantic Region, the South Central, and the West.

Production of Mellorine and other frozen desserts made with fats and oils other than milkfat in the United States during November was 3,080,000 gallons. This was 5 percent larger than in November 1963 and 18 percent greater than the 1958-62 average for the month. The January-November output was 1 percent above the corresponding period in 1963 and 14 percent above the average.

From October to November, manufacture declined 21 percent, compared with 34 percent at this time in 1963 and 26 percent on the average in the 1958-62 period. Seasonal decreases occurred in all states except Arizona.

WATER ICE PRODUCTION

U.S. production of water ices during November was estimated at 935,000 gallons- 2 percent more than in November 1963 and 19 percent greater than the 1958-62 average for the month. Output through November this year was up 3 percent from the eleven-month period in 1963 and 5 percent from the average.

Production dropped 40 percent from October to November. This decline was virtually the same as in both 1963 and the average of the preceding 5-year period. Output was off sharply in all regions. Compared with November 1963, gains occurred in the North Atlantic Region, the West North Central, and the South Central.
