ICE CREAM PRODUCTION

Production of ice cream in the United States in August declined below that of the corresponding month of each of the previous five years. Output, estimated at 73,920,000 gallons, was off 2 percent from August last year and 1 percent from the 1958-62 average for the month, the Crop Reporting Board reports. Production dropped 8 percent from July to August this year. Last year, output decreased 4 percent between these months, while August production averaged about the same as that of July in the 1958-62 period. Temperatures during August averaged below normal in the entire country except the following areas: (1) a considerable portion of California and some of Nevada; (2) a southern border and Gulf area from southeastern Arizona to about the southwest corner of Alabama, including major portions of New Mexico, Texas, and Louisiana; and (3) most of the Florida peninsula.

Compared with August 1963, ice cream production was less in all regions except the East North Central, where it was 1 percent more. Decreases varied from 1 percent in the South Central States to 7 percent in both the South Atlantic and the Mountain. Output was 2 percent smaller in the North Atlantic Region, where a 7-percent decrease in Pennsylvania much outweighed a 2-percent gain in New York. Production was down 3 percent in the West North Central States and 5 percent in the Pacific. Output was 6 percent smaller in California.

Compared with the 1958-62 August average, changes by regions were mixed. Production was 3 percent more in the Pacific States due to a 6-percent gain in California. Output was about the same in both the East North Central and the South Central States. In the North Atlantic Region, the 3-percent decrease was due largely to the 12-percent drop in Pennsylvania. New York's production was 1 percent more. Output was down 5 percent in the South Atlantic States and 2 percent in the West North Central.

1/From enumerations. 2/Includes Alaska and Hawaii.

U.S. production of ice milk was estimated at 25,505,000 gallons during August, the Crop Reporting Board reports. This was 3 percent smaller than in August 1963, but 29 percent larger than the 1958-62 average for the month. Cumulative output through August this year was 4 percent more than the January-August period of 1963 and 43 percent above the average. From July to August, production declined 12 percent this year, compared with 3 percent a year earlier and an average of 1 percent in the 5-year period. Sharp seasonal declines occurred in all regions of the country.

Compared with August 1963, production increased in the East North Central Region and was steady in the West. Decreases were shown in all other regions.

SHERBET PRODUCTION

Sherbet manufacture in the United States during August was estimated at 5,030,000 gallons - 3 percent smaller than in August 1963 and 1 percent less than the 1958-62 average for the month. The seasonal decrease from July to August of 20 percent compares with 15 percent at this time in 1963 and 9 percent on the average in the preceding 5-year period. Production was off sharply in all regions of the country.

Compared with August 1963, output decreased in all regions of the country except the East North Central, where it increased moderately. The losses were sharpest in the Mountain and the South Atlantic regions.

PRODUCTION OF SHERBET, UNITED STATES, 1964

MONTH	ENUMERATED			ESTIMATED	CHANGE FROM:

"MELLORINE-TYPE" FROZEN DESSERTS PRODUCTION

August production of Mellorine and other frozen desserts made with fats and oils other than milkfat in the United States totaled 5,485,000 gallons, the Crop Reporting Board reports. This was 3 percent less than in August 1963, but 7 percent more than the 1958-62 average for the month. The January-August output was 2 percent larger than the first eight months of 1963 and 13 percent greater than the 5-year average.

Seasonally, the 8 percent drop in mellorine production from July to August this year compares with only a fractional decline between these months in 1963 and a 1-percent average decrease in the 1958-62 period. Output gained in Missouri, South Carolina, Alabama, Arkansas, and Oklahoma, while it decreased in all other important-producing states. Compared with August 1963, production increased in Arkansas, Oklahoma, and Oregon and held steady in South Carolina and Texas. Decreases occurred in all other producing states.

WATER ICE PRODUCTION

Water ice production in the United States was 4,435,000 gallons in August - down 2 percent from both August 1963 and the 1958-62 average for the month. Cumulative output in the first eight months of this year was 1 percent more than in the same months of 1963 and 5 percent above the average.

Production declined 30 percent between July and August this year, compared with 25 percent a year earlier and 17 percent in the previous 5-year period. Sharp seasonal declines occurred in all regions of the country. Increases from August 1963 in the East North Central Region and the South Central partially offset decreases in the remainder of the country.
