VEGETABLES - PROCESSING

ANNUAL SUMMARY

1972

Production of the 10 principal vegetable crops grown in the United States in 1972 for commercial processing totaled 10.3 million tons, according to the Crop Reporting Board. This is 3 percent above the 1971 tonnage and 10 percent above the 1970 output. Production estimates exclude tonnage of mature crops not harvested because of economic factors.

The 1972 tonnage is up from 1971 for 7 of the ten principal crops. The increases are: asparagus, 1 percent; green lima beans, 12 percent; snap beans, 3 percent; sweet corn, 3 percent; cucumbers for pickles, 1 percent; spinach, 1 percent; and tomatoes, 5 percent. Decreases in tonnage from 1971 for the other principal crops are: beets, 16 percent; cabbage for kraut, 19 percent; and green peas, 2 percent.

Average yields per acre in 1972 were above or the same as 1971 for green lima beans, sweet corn, cucumbers for pickles, tomatoes and green peas, but below for asparagus, snap beans, beets, cabbage, and spinach.

The total value of the 10 principal processing crops in 1972, at \$512 million, is up 7 percent from 1971 and 16 percent from 1970. "Value per unit" for processing vegetable crops are equivalent returns at processing plant door and for fresh market, f.o.b. shipping point.
