Grain Report for 11/18/2021 - Final

Compared to last week: Premiums are steady with moderate demand. According to the US Drought Monitor on November 16, 2021 Drier weather in the southwestern United States, western Great Plains, and Southeast led to drought conditions developing or worsening for parts of these regions this week. The northern Great Plains, western Great Lakes, the Northeast, and the Pacific Northwest saw significant precipitation this week, which led to improving drought conditions in parts of these regions. Slightly warmer than normal weather occurred in the Northeast, and warmer weather also occurred west of the Mississippi River. The warmest temperatures, compared to normal, were found in the northwestern Great Plains and in the West, with some areas seeing temperatures at least 6 degrees above normal. In Hawaii, drought conditions stayed the same or worsened after another drier week. Similar conditions occurred in Puerto Rico this week, where degrading conditions were spread across the island. Due to the holiday the next available report will be Friday, December 03, 2021.

## Futures Settlements
