## Grain Report for 10/22/2021 - Final

Compared to last week: Premiums are steady with moderate demand. According to the US Drought Monitor on October 21, 2021 A strong low pressure system resulted in widespread precipitation (0.5 to 3 inches, liquid equivalent) from the central Rockies east to the northern and central Great Plains from October 11 to 13. More than a foot of snow blanketed parts of Montana, Wyoming, and western South Dakota. Along a trailing cold front, heavy to excessive rainfall (1 to 3 inches, locally more) occurred across eastern Oklahoma and central to eastern Texas. As this front progressed eastward, scattered thunderstorms with locally more than one inch of rainfall swept across the Ohio and Tennessee Valleys. Much of New York and northern New England received 1 to 2.5 inches of rainfall on October 16. Only light weekly precipitation amounts (generally less than 1 inch, liquid equivalent) were observed along the Cascades, coastal ranges of the Pacific Northwest, and northern Sierra Nevada Mountains from October 12 to 18. Dry weather prevailed throughout much of the Southeast, Southwest, and northern Intermountain West during this 7-day time period. Southeastern Mainland Alaska and the Alaska Panhandle received near normal precipitation amounts during mid-October. Enhanced trade winds resulted in locally heavy rain across east-facing slopes of the Big Island of Hawaii recently. Locally heavy rainfall also occurred throughout Puerto Rico this past week. 7-day temperatures (Oct 12-18) remained above average across the eastern third of the U.S., while below average temperatures were observed over the West. The next available report will be Friday, October 29, 2021.
